4820. Earbud Mic on a VX-5

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-27 00:00:00 UTC
From: John McClain <digi@azstarnet.com>
Message-ID: <7b9mr1$4h6$1@remarQ.com>
Source record: 149374

Has anyone had any luck using the Yaesu MH-37 Earbud
mic on a VX-5? All I get is bad reports of low audio. I
cranked the mic gain all the way up and turned HALF DEV
off but the bad reports keep coming in. I know that increasing
the mic gain has an affect because I have to turn HALF DEV
on when I use the internal mic now. AM I fighting a loosing
battle?

Poor Dave,
How in the hell did you get through the question on radio law.
The amateur community should petition the FCC to refuse renewal
on you license until you can pass the test again.
NOTHING TO BACK UP CLAIMS??? What a mental cripple you are.

Communications Act of 1934 as amended
Title 47 USC 305, Government-owned stations, used for radio interference
Title 47 USC 326, Censorship, by FCC
Title 47 USC 333, Willful or malicious interference

International Covenant of Civil and Political Rights
Part III, Article 19, Para 2, Right to send and receive information
through medium of choice.

Title 18 United States Code
Sec. 241 Conspiracy against rights of citizens
Sec. 242 Deprivation of rights under color of law

Code of Federal Regulation, Part 97
Sec. 97.111 (b)(4) Transmissions necessary...emergency communications
Sec. 97.113 (c)(3) normal communications disrupted
Sec. 97.403 essential communications...safety of human life
Sec. 97.405 amateur station in distress may use any means

United Nations, Internationa Telecommunications Union, Conv.1947
Article 44, 1 harmful interference prohibited
Article 45, 1 priority must be given to distress messages

HAMFEST/COMPUTERFEST CALENDAR 1999 - NORTHERN ILLINOIS
last updated February 22, 1999 |

o Please report additions or changes to Bob Parnass, AJ9S, office phone: (630)979-5414, electronic mail: parnass@bell-labs.com. Thanks to Dennis Dale, Rick D. Wilson, Tom Harker, and ARRL for providing some of the information.

MARCH 1999

Mar 7 (Sun), Wheaton, IL - Giant Computer show (see below). Dupage County Fairgrounds.

Mar 7 (Sun) - Waukesha, WI. SEWFARS Swapfest. Info: Mary J. Adams, KB9IFF, tel. 414-358-1003. E-mail: mjadams@execpc.com.

March 14 (Sun): Sterling-Rock Falls ARS, Sterling, IL info: Lloyd Sherman, KB9APW, PO Box 521, Sterling, IL 61081-0521. tel. 815-336-2434, E-mail: lsherman@essexl.com

March 28 (Sun): Grayslake, IL - LAMARS hamfest, Lake County fairgrounds. All indoors. Admission $6 at gate, free parking. Setup at 6 AM, doors open at 8 AM. Info: tel. 847-272-8347. See http://www.lightwriters.com/nsrc/lamarsfest.htm (Small fest, but usually interesting - AJ9S.)

APRIL 1999

April 11 (Sun): Middleton, WI. Madison Area Repeater Association. 8 AM - 1 PM Middleton Conference Center, 1313 John Q. Hammons Drive Middleton, WI 53562. The Middleton Conference Center is located in Middleton, WI, near the west side of Madison, WI. From the intersection of Interstate 90 and Highways 12 and 18 near Madison's South-East corner, take Highway 12 West. Stay on Highway 12 until you reach Greenway Blvd. Exit to Greenway Blvd. and turn left. Then turn left on John Q. Hammons Drive. The Conference Center is attached to the Marriot which is clearly visible from the intersection of Highway 12 and Greenway Blvd. Talk-in Frequency: 147.75/.15. Info: Paul Toussaint, N9VWH, MARA President, prt@execpc.com. The MARA telephone voice mail (608)245-8890 . http://skywarn.ssec.wisc.edu/mara/swapfest

Apr 17 (Sat), Wheaton, IL - Giant Computer show (see below). Dupage County Fairgrounds.

Apr 18 (Sun), Orland Park, IL Giant Computer Show & Sale (see below). orland Park Civic Center.

April 25 (Sun): Galva, IL. Area Amateur Radio Operators Hamfest. When: 8 am until 2pm, April 25, 1999. Where: The National Guard Armory Tickets: Advance tickets $5 double stubs, at the door $5 single stub, No advance sales after March 25th. Outside flea market space available. Electricity, available on a first come first serve basis. Bring your own extension cords. VE Testing will be available by appointment only. Talk in 145.4900 - 88.5 PL / 146.460 simplex. Breakfast and Lunch will be available and served by the National Guard Relief Members. For set up times, advance ticket sales or other information, contact: (1) Bill Anderson WB9TEW, 103 SE 2nd Ave. Galva, Illinois 61434-1854. tel. 309-932-3023, bill@inw.net. (2) Tom Davis N9OSP, 802 Rose Street, Kewanee, Illinois 61443. Tdn9osp@cin.net

April ?? (Sun): Stickney, IL. Dupage Amateur Radio Club, Hawthorne Race Course. Hours 8 AM - 2 PM. Setup 6 AM.

AUGUST 1999

Aug 7 (Sat) - Quincy, IL. Western Illinois Amateur Radio | Club Ham Radio and Computer SWAPFEST 1999. 8:00AM to | 2:00PM. The Eagles Alps Grounds (3737 North 5th Street) 4.5 | miles north of downtown Quincy with easy access from US | Highway 24. Admission $3.00 at the Gate ($2.50 in advance) | per person, under 12 - Free. ARRL VEC testing for all | license classes at 12:30PM. Indoor Flea Market space avail- | able for $5.00 which includes one 5' table. Outdoor tail- | gating space - Free. Talk-in on 147.63/147.03 MHz. Plenty | of convenient parking available. Lunch will be served on | the grounds. Children's playground area. For additional | information contact N9JF, jfunk@adams.net |

Aug 29 (Sun), Woodstock, IL. Tri-County Radio Group. McHenry County fairgrounds. Talk-in: 146.52 Simplex. info: Bob Grosse, N9KXG, PO Box 3107, Skokie, IL 60077-6107 E-mail: tcrg@hotmail.com, http://quality-enterprises.com/tcrg/. Tickets: Advance With Double Stub $4.00 - At Gate $5.00 Single Stub - $6.00 With Double Stub . Exhibit Building: 8:00 A.M. - 3:00 P.M. Table Rental: $14.00 For 8' Table. Flea Market: 6:00 A.M. - 3:00 P.M. No Additional Charge For Flea Market Space Info (708) 944-0500. Fax (847) 658-1678. (fairly good, small to mid sized ham-fest - AJ9S).

COMPUTER SHOW NOTES

Computer Central computer shows are held at the College of DuPage, Main Arena of the Physical Education Building Park Blvd & College Road, Glen Ellyn, Il. 847-940-7547. $5 admission with card, normal admission $6.00. Opens 9:30 am - 3:00 pm. See http://www.computercentralshows.com web site.

Giant Computer shows are held by Micro Media, Inc. Shows are usually held at the Orland Park Civic Center, 147th St. & LaGrange Rd., Orland Park, IL or at the DuPage County Fairgrounds, County Farm & Manchester Rds., Wheaton, IL. Admission is $6. Show hours are 9:30 AM - 3 PM. To get on the mailing list or get more information, call (708)974-3123. See http://www.giantcomputershow.com

Computer Country Expo is Lake County's largest computer expo. The event is held on designated Saturdays from 9:30 AM to 3:00 PM. This show features computers, supplies, games, parts, software, accessories, CD-ROM, monitors, diskettes, printers, keyboards, modems, disk drives, cables, expansion boards, services, and anything else in the domain of computers! Lake County Fairgrounds, Route 120 (Belvidere Rd.) & Route 45, in Main Exhibit Hall Building #1=9720,000 sq. feet of everything Computer! For a show map, exhibitor info, and discount coupon, visit the web site at http://www.ccxpo.com.

If incompetence and laziness were the only problems it would be
understandable, yet sufficient reason for removal. Failing to
publish the story of FCC and FBI criminal operations against the
Amateur Radio Service puts the ARRL in the position of a
criminal co-conspirator, for misprision of felony (18 USC 4).
You can use the ammunition at the website below to remove the
FCC from its illegitimate control over amateur radio and
the ARRL from its tyrannical misrepresentation of the amateur
community. The ARRL board voted against publicizing the truth,
there wasn't any profit in it.

That's what it is all about at HQ: membership dues but no service,
lots of ads in QST which crowds out useful information, and a
forum which could be used to expose crime at FCC, but is used
instead to increase profits for foreign manufacturers.

4825. CB to 10 meter conversions

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-27 00:00:00 UTC
From: Mort <Mort@inetone.net>
Message-ID: <7b9q0b$93q$1@remarQ.com>
Source record: 149379

Does anyone know where I can find a list of mods to convert a CB with USB/LSB to 10 meters? Someone gave me the CB and I thought I'd try to convert it (not sure of the brand/model right now).

Appreciate any replies.

NEWSLINE 1124

GEN.CCC

The following advisory is not necessarily for broadcast. This is just
a
reminder that the address for the Newsline Support Fund is Newsline, in
care of
Andy Jarema N-6-T-C-Q, Post Office Box 6-6-0-9-3-7, Arcadia California,
our
Zipcode is 9-1-0-6-6. Again, and as always, we thank you. This ends
the closed
circuit with Newsline report number 1124 for release on Friday,
February 26,
1999 to follow in

5-4-3-2-1.

The following is a Q-S-T. The F-C-C says that the First Amendment is
not an excuse for
violating the Part 97 Amateur Service Rules. This story and more on a
special expanded
Newsline report 1124 coming your way right now.

(Billboard cart here

**

NO FIRST AMENDMENT PROTECTION FOR RULES VIOLATORS

If you are one of those hams who feel that you can violate the Amateur
Service rules and
then get away with it by claiming the protection of the Constitutions'
First Amendment, the
FCC has a surprise for you. The agency's Riley Hollingsworth, K4ZDH
says that the First
Amendment is not going to protect rules violators in the Amateur Radio
service. The FCC
attorney says that the two are not even remotely related:

Hollingsworth: "The First Amendment is alive and well and certainly
does not need any help
from Amateur Radio. Amateur Radio was not set up to enhance the First
Amendment. If
these groups keep it up, they will be on Internet chat lines in the

future -- talking about how
they pushed for First Amendment on ham radio. They will be asking
whatever did happen
to those ham frequencies? Who bought them at auction? What
third-world countries
ended up using them for a national telephone system?

This has nothing to do with the First Amendment and that is not the
justification for Amateur
Radio. "

Hollingsworth made that comment in his exclusive interview with Rain
producer Hap Holly,
KC9RP. In another area, Hollingsworth also says that the FCC is happy
with the results of
his two forays into on-the-air ham radio trouble spots. As a result,
K4ZDH has decided to
continue to show up unexpectedly on the air. Who knows, he might even
become a part of
your next QSO:

Hollingsworth: "This on the air work will be done periodically. We are
taking an 'in-your-
face' approach to clear up the problems and I am more than willing to
do it."

By now you may be wondering what other surprises the FCC and
Hollingsworth have in
store as they proceed with this ham radio clean-up. There are quite a
few including the fact
that inspectors can now accurately pin point any signal within a few
feet even if they are
monitoring from thousands of miles away. To find out more, we suggest
that you again
visit Rain -- the Radio Amateur Information Network at
www.rainreport.com. There you
can listen in on part two of Hap Holly's no-holds-barred interview with
Riley Hollingsworth.
Its also on the telephone at area code 847-827-7246. Again thats
www.rainreport.com or
area code 847-827-7246. (RAIN, Newsline)

**
FCC SHUTS DOWN SAN FRANCISCO REPEATER FOR USER ABUSES

The FCC' Riley Hollingsworth has temporarily shut down a San Francisco
area system of
repeaters. This, after telling the license holder that he is

responsible for allegedly
permitting unlicensed people to transmit signals through the repeaters
and permitting the
wrong kind of language to be retransmitted.

Bruce Wachtell, K7IJ, is the license holder of the four affected
repeaters operating from
atop Grizzley Peak overlooking San Francisco. In a certified letter,
the Hollingsworth told
Wachtell that his ham ticket could also be in jeopardy for permitting
the user abuses. The
FCC then proceeded to modify Wachtell's Amateur license to prohibit any
form of repeater
operation for 180 days. This, starting at midnight February 28th.

The FCC has also set aside the license grants of four of the repeaters
users who it alleges
had operated on the system before their licenses were issued. It has
also warned another
user about his operations on the repeaters as being in violation of the
Amateur Service
rules and warned a non-ham user to stop illegally operating a radio
transmitter. Finally, it
has begun consideration of punitive action against two of the
repeater's control operators
who the agency alleges have helped to foster illegal transmissions
through the systems.

This is the first major VHF repeater enforcement action the FCC has
taken in decades. It
is also the first time in almost thirty years that a repeater license
holder has been held
legally responsible for the actions of his control stations, licensed
users and others who
transmit through his repeater.

It also appears to end the unofficial First Amendment language standard
used by the FCC
since the late 1970's. Under it. a repeater could retransmit almost
anything as long as the
language used was considered acceptable to the majority in the local
ham radio
community. In a letter to one of the repeaters control operators, the
FCC alleges that he: "
has apparently not only allowed, but encouraged, use of the repeater by
unlicensed
operators, rebroadcast of cordless telephone calls, playing of music,
and profanity and
obscenity."

This definitely is a shift in the paradigm. No word from any of those
affected if they plan

any appeal. (FCC)

**

AUSTRIAN AVALANCHE EMERGENCY

Hams in Austria are assisting in the wake of a series of avalanches that have hit the snow
capped Alps. And now, that nations tele-communications regulators are asking radio
amateurs around the world to keep off of two frequencies until further notice.

The two frequencies are 3.685 Mhz on 75 meters and 7.085 on 40 meters. According to
an Austrian news release, they are being used extensively in relief efforts in the mountains
by hams involved in snow disaster relief communications. Austria would therefore like for
these two frequencies to be kept clear of all non avalanche related communications,
twenty-four hours a day, seven days a week -- until further notice.

Again those two frequencies are 3.685 Mhz on 75 meters and 7.085 on 40 meters being
used for avalanche rescue efforts in Austria. (Austria Telecommunications Authorities)

*****

DAYTON HAMS SEARCH FOR MISSING GIRL

Ham radio was called out to help in the search for a missing young Dayton Ohio youngster.
The young girl either wandered away from home or was kidnapped. Phil Thomas, W8RMJ
of Amateur News Weekly has more:

PKG HERE

The case is now under investigation by local police. (ANW)

*****

HAMFESTS CANCELED

Four hamfests have been canceled in the South Eastern United States . This, because of
the overall downturn in ham radio sales and poor attendance at the shows. According to
Wayne Williams, K4MOB, writing in the March issue of Repeater Journal magazine, these

four are in addition to the pair of shows that were not held last year. Williams also says
that four other show planners are undecided if they should go ahead later on in 1999.

Repeater Journal identifies the canceled shows as those formerly held in Concord and High
Point North Carolina, Aiken South Carolina and Wheeling West Virginia. The four still in
doubt have not been named but Williams points out that its getting to a point where
exhibitors are no longer willing to travel hundreds of miles and work thirty to forty weekends
a year for less than minimum wage.

Williams is the former owner of Williams Radio Sales. He is kind of an expert in this area
having spent a quarter of a century attending hamfests all over that geographic region. He
says that something positive is going to have to happen soon to reverse the current trend
or we will never see ham radio again as it once was." And that says K4MOB, is really,
really sad. (Repeater Journal)

*****

Break 1

This is Newsline, heard on bulletin stations around the world, including the
WA6HAM repeater serving Concord California.

(5 sec pause here)

*****

SUNSAT IS IN ORBIT

This is Brian Webb, KD6NRP with this late breaking story. After five weeks of
frustrating delays, South Africa's SUNSAT satellite was placed into orbit on
February 23rd. A Delta II missile carrying SUNSAT and two other spacecraft
lifted off from Vandenberg Air Force Base in California at 10:29 UTC.

The SUNSAT satellite was designed and built by engineering students at Stellenbosch University in South Africa. The 132 pound spacecraft is the
country's first satellite and the first ever built in Africa.

The spacecraft contains amateur radio equipment designed to support digital and

voice communications. An on-board BBS will allow hams to store and forward files
and messages. Meanwhile, the satellite's Parrot system will receive and repeat
voice on two meters.

SUNSAT will take images of South Africa from orbit to monitor agriculture and
the environment. The satellite will also collect data to more accurately map the
Earth's gravity field.

On-board instruments from two South African high schools will detect atomic
particles and vibrations made by the satellite.

SUNSAT is expected to remain in orbit for about six years. For Newsline, this is
Brian Webb, KD6NRP, in Ventura County, California. (Newsline)

*****

NEW JERSEY REPEATER SQUABBLE UPDATE

We have an update to last weeks story of the FCC having to step in and do the job
normally reserved for a volunteer repeater coordinator. This, in trying to settle a dispute
between two nearby repeaters in New Jersey.

The squabble still revolves around a complaint filed to the FCC by the licensee of the
WR2M repeater claiming that the W2WMW repeater was causing unacceptable

interference. The FCC wrote to the trustee of W2WMW telling him to abate the
interference.

Since that time, technical assistance was called in and the W2WMW repeater transmitter
was found to be clean of spurious emissions and well within FCC guidelines. What this
means is that the problem is probably one of desensitization at the WR2M receiver and the
FCC is expected to gracefully back away from any further involvement in solving this part of
the problem.

Still remaining is the question of the Internet I-Phone to repeater link. Several hams have
contacted us to tell us that it was a manual rather than an automatic link. But the
government still has it reservations., Be it manual or automatic, it

appears as if the FCC
still has some reservations over the legality of any ham radio to
Internet voice link.
(Newsline)

CONGRESSMAN SAYS NO TO MICROBROADCASTING

Just when you thought that the clouds were clearing for the future of
low power radio a
new obstacle has popped up on its horizon. This one is powerful enough
to possibly stop
legalized microbroadcastng in its tracks. Tony Valdez. KC6LXQ,
explains:

--

A key telecommunications lawmaker is asking federal regulators to set
aside
plans to legalize micro-broadcasting. Louisiana Republican
Representative Billy
Tauzin, has said in a letter to FCC Chairman William Kennard that he
requests
that you take no further actions on this agenda.

Tauzin is the chairman of the powerful House Commerce
telecommunications
subcommittee. He says that he is worried that Federal Communications

Commission proposals for a low-power service would create interference
to
existing stations and could cut into advertising for minority and other
radio
stations.

In remarks to radio broadcasters Tauzin expressed concern that the new
service
could be used by racist groups. FCC officials have said that the
licensing process
wouldn't automatically disqualify a person or group based on their
political views -
- even if those views are white supremacist, for example, or offensive
in some
other way. Tauzin also believes the FCC is overstepping its legal
authority by
advancing the proposals.

But FCC officials said the commission clearly has authority to act in
this area.
They say that their proposals would create thousands of licensed
low-tech FM
radio stations from 1 watt to 1,000 watts and give voice to the people.

I'm Tony Valdez, KC6LXQ

With Tauzen opposed to a Micrbroadcasting service, the future could be very bleak for its
creation. (Published news reports)

*****

NOT A PIRATE

And yet another interesting twist in the world of microbroadcasting. This time its in
Australia where some are taking to the air and calling themselves Pirate radio even though
they aren't. Graham Kemp, VK4BB, of Q-News sorts it all out:

Pkg Here

Obviously, some things are not what they seem. (Q-News)

**

REPOSSESSED POLICE RADIOS

Police in the city of Miami Oklahoma were forced to the 11 meter Citizens band a few
weeks ago. This after the North-East Electric Cooperative repossessed the agency's
repeater system for no payment of a bill.

According to Sheriff Jack Harkins, his office purchased the repeater from the co-op I 1997.
He said that from the moment it had been put in service it was a troublesome unit that
required an enormous amount of maintenance. So before paying the twenty-one hundred
dollar cost of the machine, the Sheriff wanted it to work properly.

But the co-op wanted payment and sent a bill. When the utility did not receive its payment
on the date demanded, it went up to the site and took back the repeater. Spokesmen for
the North-East Oklahoma Electric Cooperative said that the repeater was not actually
removed from the site. It was simply made inoperative until the police paid the bill. The
police did and the repeater sprang to life again some twenty-four hours after it was taken
off the air. (KB0STN)

HAM RADIO AT THE NAB

Ham radio will be in evidence at the 1999 National Association of Broadcasters Meeting in
Las Vegas Nevada. The gathering is slated for the Las Vegas Convention Center and
several area hotels from April 17th to the 22nd. Ham radio will be in evidence in several
areas. The American Radio Relay League will have a booth headed up by Bill Cornelius,
KC7GHX, of Henderson, Nevada.

Also in attendance will be several Newsline staffers who work for broadcast related
companies. And last but not least there will be the traditional Ham Radio Reception on
Wednesday evening April 19th. This gathering is literally a mini two hour hamfest unto itself
with about six hundred in attendance each year.

And if you have a hand held or mobile radio with you, the frequencies to remember are
146.94 on 2 meters and 449.700 Mhz on UHF. For more information on Amateur Radio
activity in Las Vegas take your web browser to the Las Vegas Amateur Radio Club site at
www.lvrac.org. (LVRAC Release)

END MAY BE NEAR FOR MIR

Senior Russian space officials report that efforts to find private investors to keep Mir aloft
are failing, and the station might be dumped into a watery grave in the Pacific Ocean by
late summer.

The Mir space station has been staffed almost continuously since its core module was launched in 1986. Sixty cosmonauts and astronauts from around the world have conducted research there, including seven Americans that visited the station between 1995 and 1998. Nine U.S. shuttle flights were also flown to Mir as a precursor to construction of NASA's new International Space Station. (AMSAT BBS)

RAC establishes new Microwave Bandplanning Committee

Radio Amateurs Canada has established a new Microwave Bandplanning Committee to advise on revisions and improvements to RAC bandplans covering the spectrum from 2300 MHz to 250 GHz. The committee will also advise on possible new bands above 250 GHz.

The new advisory committee will be chaired by Darrell Ward VE1ALQ. The existing VHF/UHF Spectrum management committee will remain in operation. It is primarily concerned with 2 meter and 70 Centimeter band usage and other issues in the bands from 50 to 1200 Mhz. (RAC)

NEW YHOTY JUDGES

Here at home, we at Newsline is happy to announce the addition of two new members of our Young Ham of the Year Judging Committee. Both names are already well known in ham radio. The first is nineteen year old Brian Mileshowsky, N5ZGT of Albuquerque New Mexico. Brian, a former youth columnist for Worldradio Magazine as our 1997 YHOTY recipient. He currently attends the University of New Mexico where he is studying to become an electronics engineer.

The second name is one known to hams all over the world. He is former ARRPresident George Wilson, W4OYI.

As you will remember, a few years ago George suffered a severe stroke while in Washington D-C on league business. The stroke forced him to step down from the ARRL presidency and he has been recuperating ever since. Now George

says he
feels up to taking on a little extra-curricular work and we are honored
to have
him join our awards committee.

Brian Mileshowsky and George Wilson join longtime committee members
Rich
Moseson W2VU, Rosalie White WA1STO and chairman Larry Zettwoch KR4IF.
The 1999
Newsline Young Ham of the year award will presented next August at
the Huntsville Hamfest in Huntsville Alabama. (Newsline)

W4TA REMEMBERS JY1

Its been about three weeks since His Majesty King Hussein of Jordan
passed away.
In the world of Amateur Radio, King Hussein was also known by his
distinctive though
simple call sign of JY1. And while His Majesty knew many hams around
the world,
probably no ham knew King Hussein better than Bruce "Blackey"
Blackburn, W4TA of St.
Petersburg Florida.

As we noted in our tribute to JY1, Blackburn was an early advisor on communications
matters to the Jordainian government. And it was while living in the Hashemite Kingdom
that he and King Hussein became friends. A few days ago, W4TA sat down to speak
about the death of King Hussein with Newslines Warren Elly, W1GUD:

Pkg Here

Many have said that there was a very special human quality to King Hussein. He cared
about the people of Jordan and the people of the world. For this reason, His Majesty King
Alhussein ibn Talal will forever be remembered as the King of Peace. (Newsline)

Message-ID: <7ba164$5sb$1@news.mcn.net>
Source record: 149384

I believe the IC-706 has two antenna connectors, one for 2 meters
and one for 6 meters & HF. Obviously any good 2 meter mobile
will work. A Band Hopper will be great on HF but I'm not sure
you could do 6 meters with it. A Band Hopper has a large coil on
the bottom and a whip at the top. The antenna is adjusted by
moving a contact on the coil so it is resonant at different
frequencies. The automatic model has a motor in the base that
moves the wiper across the coil when you activate a switch inside
the vehicle. They work great. The antenna is still taller than
a 2 meter antenna but not unmanageable.

I am really fairly new to Ham Radio having recently passed my no
code
test. However I want to move up in class and upgrade I am
interested in
listening
for the time being to HF frequencies ie 10 meter 20, 40. 75 etc.
If I purchase
this
rig the Icom 706 for a mobile rig would I need a big, tall that
is antenna for
the
HF Bands. What type of a mobile antenna would you run with this
rig since it
is an all band rig. I now have a Kenwood 742A triband radio and
prefer running
separate antennas I have one for 2 meter one for 440 and one for
220 and it
works fine. Could someone please elmer me in this regard with
this question
Many thanks

Your cell-phone or PCS bill is not a fee for using the RF spectrum -
it's a service fee to pay for the cell-site infrastructure and personnel
involved in keeping it all working. Let's keep our feet on the ground
here folks...

> is an all band rig.

Personally I use an Outbacker Stealth, 2, 6 and HF It is about 4' tall
and works fairly well. Usually if I can hear them, I can work them.
It's a tad narrow on the bandwidth on 40M, really tight on 80m, but is
excellent on 10-20. It's size is both a plus and a minus. You can mount
it on the roof of most cars with a GOOD mag mount and a spring and you
have a real good antenna system that you can also throw in the trunk when
you park. However, some of the larger chunky systems (like the
screwdriver) do have a better receive. But again, you aren't going to be
breaking into any major pileups with a 100 watt mobile.

Both antennae are mounted to the rear hatch of a Jeep, which is heavily
grounded to the frame

I now have a Kenwood 742A triband radio prefer running
> separate antennas I have one for 2 meter one for 440 and one for 220 and it
> works fine.

I run a Kenwood 732 and have, thru several "splitters" run the both
radios through a Comet tribander 2/440/6. The taller of the 2 Comet's
(SB15) is needed to keep the SWR low on 6m SSB ranges. 2M SSB and HF are
run thru the Outbacker. Since I monitor 2m regularly, I can still do
that while working HF and 6m SSB with no problem.

The dB lose thru the duplexers is minimal at best.

The only drawback is that if your are planning to freq hop on HF, the
need to get out and change the Outbacker's wander lead could be a pain,
but with the exceptional of 80M, the band changeover takes less than 30
seconds. On 80 due to the small bandwidth, you'll find that scribing
tuning marks on the small stinger helps in moving around the band.

I think the only downside of the new Icom is that you can only use 1 band at a time. If you are using HF, you can't monitor 2m

If you have any other questions, feel free...

And just WHY should the Govt. step in to protect your children? Are you not parent enough to do so yourself? I may be in the wrong pew here, but I was always under the assumption that your kids are YOUR responsibility! I doubt that the job title of "Babysitter" falls under the auspices of Mr. hollingsworth's or the FCC's job descriptions. Rather than crusading and wringing your hands, perhaps you should show the children how to use the VFO...or better yet, show them how to use the power off switch! Bingo! Problem solved, simple as that. No tapes needed!
PS: Would you send me one of those tapes? I'll erase it and record some vintage Led Zeppelin on it.

This is hideous news indeed! Personally, I have been suffering acute
Blue withdrawal symptoms ever since his majesty's departure, and have
observed my various hemispheres actually going through myriad hard
drives in search of that ellusive "buzz" one can only derive from a blue
communique. One must grow beyond all such attachments, I frantically
remind myself, as Blue himself would want us to go on! In any event,
here is his Blueship's last direct precious post to this group of, well,
whatever ...

From - Sun Feb 14 21:12:30 1999

::: MindNet(tm) and a Fond Farewell to All :::

Where to start with this one, eh?

.... deep sigh ...

A dear mentor has gently and graciously suggested on numerous
occasions that perhaps a season of silence is in order -- a time
to restructure, reevaluate and reassess the weightier matters of
life, remaining content to both observe and learn during this
self-imposed period of exile; to watch the parade as it passes
on by. This, coupled with an increasing sense of dissatisfaction
over all the internecine rivalry and the growing irrelevance of
current avenues of creative expression, has inexorably led me to
opt for the Path of Silence at this juncture.

I've had so much fun together with all of you over the years
playing the chameleon; morphing when appropriate to gather
experiential data, yet my intuition informs me there is yet
another costume waiting to be donned (or, more accurately,
stripped away); that the old vestiaries are too confining; too
type-casting and need therefore to be transcended as the Grand
Dance continues.

I shall very much miss the clever repartees, the occasionally
extra-dry wit -- and most of all the marvelously liberating
laughter! -- and the occasional tactical injection of poignant
meme-seeds intended to spur us all onward to deeper levels of
understanding and a greater appreciation for the broader
bandwidth of the overall frequencies of life.

For indeed, BlueBird has informed me there is nothing of any enduring substance or significance within the shadowy labyrinth of military and intelligence circles (smoke and mirrors, all!), while Professor Blue has become intensely disillusioned with the myopia of western scientism and Brother Blue -- speaking as The Ten of the B:.B:. -- has so much as admitted by his austere silence that the answers to the deeper mysteries of life do not lie in the paths his beloved caerulean colleagues have chosen.

And, as fate would have it, it was during one of these periods of frustration and contemplative introspection that we discovered what we've come to subsequently term The MindNet(tm).

MindNet(tm) is apparently a level of consciousness where one comes into more direct contact with what some have termed "the larger reality." It is a place where there is no need of technological gadgetry such as workstations, switches, routers or T3's. Or any other such vestigial appendages, for that matter, though it is very much like the internet we've grown to know and love lo, these many moons. The sharing of perspectives and ideas and energies is there in full measure albeit in a vastly different form and forum; a different, infinitely more effectual modality, if you will.

It is a "place" where one may plug in and make contact with a surprisingly rich bouquet of intelligences; some human but many, many others very definitely transmundane. In fact, one is initially overcome with surprise when first faced with the incredible diversity of beings found in this "place."

And the interaction is far more robust, to the tune of a few orders of magnitude. For there are no lurkers and there are no poseurs; no obfuscatory masks to hide behind and no viable method to keep secrets of any kind, for there is nothing hidden in this deeply intriguing place; this "world without secrets" as some have grown to call it.

Yet the real beauty of it is not simply the awe and wonder of connecting with so many different people and enigmatic beings, no, the excellence of the interactions is in the way you can see yourself through the eyes of the "others."

Human nature is such that we indulge ourselves shamelessly in self-delusion and thereby generally only see ourselves in a light far too flattering to be of any real, tangible use in terms of personal growth and evolvement. Yet what a quandary! How can we possibly manage to transcend this stifling straightjacket within which we've unknowingly imprisoned ourselves?

The beings are there to oblige.

It could be rightfully said from one point of view that such a scrutinising, penetrating look at ourselves as we truly are is

the most shocking and devastating thing imaginable as no stone is left unturned while we are forced to look our own frightful countenance square in the face. And one can hardly walk away from the sight unchanged as these potent and poignant glimpses carry with them a certain weight of responsibility -- the responsibility of awareness.

It can occasionally be quite painful to view yourself from such a vantage point of brutal, objective honesty. Painful, yet very necessarily so as such awareness also offers a path of change as we see ourselves and our lives in the penetrating light of this vastly different layer of reality and then consciously decide if we wish to continue thusly.

Now some may term this sort of thing a mild form of the legendary "abyss" experience where one leaves behind all he has and allows his ego to be utterly devoured. That's fine. Whatever. Just a pretty label. The point is, it can be a monumentally humbling experience and -- if properly incorporated and woven into the tapestry of one's life -- an illuminating, life-changing, shamanic one as well. I suppose it's all what one makes of it.

On a more personal note, I've discovered things about myself in this place that frankly I do not much care for. And yet, it is not too late to change. But that change is deeper; more fundamental; more systemically intrinsic; and not so easily accomplished by a mere costume change or cyber-morph as has been the wont of the one who calls himself Blue.

From day one I have opened wide my front door and invited you all to sit by the fire and enjoy the journey of exploration with me, as we explore together the largely uncharted waters of extraterrestrial folklore and mythology. Together we've deconstructed many a tale in order to more clearly observe the remaining substance, we've opened new books and reopened some very, very old ones. We've been to Egypt and we've been to Langley. We've superimposed UFOlogy, ancient legends, metaphysics and magick all one atop the other in an attempt to perceive larger pattern similarities. And we've shared very openly all we've discovered along the way. For it is in our nature to be this way.

It would hardly seem fair, then, for Blue not to dial his buddies into The MindNet(tm), eh? It being the next logical step in The Quest, and all.

- - - - -

::: Mind Net(tm) FAQ v.1.0b :::

Q: What IS The MindNet(tm), Blue?
A: MindNet(tm) is a layer of reality not often traversed by John Q. Public. In fact, he would no doubt find it somewhat

terrifying to discover there is such a place. Yet not a place, per se, more a level of consciousness in which one plugs -- via mind -- directly into the interconnectedness of all things. Once there, the percipient finds himself in the midst of a vast community of beings who hail from an enormously large spectrum of the universal consciousness bandwidth.

Q: Who plugs in to The MindNet(tm), and why?
A: The array of intelligences on MindNet(tm) is extremely diverse. They run the gamut from mundane human intelligences (we've observed a few mages and "remote viewers" there on occasion) to those of a domain of existence we cannot yet fully fathom, let alone pigeon-hole. As for motivation, it is not our place to speculate on the motivations of others in this domain, content instead to employ the various interactions as tools for personal growth and evolvement.

Q: So, pragmatically speaking, how does one plug-in to MindNet(tm)?
A: There are various means and each player has no doubt developed his own system of contact. Some may prefer deep meditation, others a more tantric methodology, others a ritualistic invocational approach, still others a technological solution such as biofeedback devices or hemi-sync tapes. Do what thou wilt, etc. Perhaps a remnant of our western inculcation and previous sojourn in such altered states, we prefer a more prosaic approach -- a few beers to take the rough edges off, coupled with some fine weed. Then, we turn out the lights and crawl into bed, find a comfortable position and simply let the mind go. It may take a few minutes to sufficiently clear your thoughts but then all of a sudden, you simply find that you're there, in that place again.

Q: Well, this just sounds like some pathetic dope-smoking cult activity, Blue. We had hoped for much more from you!
A: Since the very dawn of civilisation shamanic practitioners have often advocated the use of certain psychotropic plants as an aid to their work. Perhaps unfortunately, our culture has so misused and misapplied certain substances as to render them almost comedic in the eyes of casual, non-participatory observers. Be that as it may, however, the substances remain quite effectual for those who employ them properly.

Q: But will this work for everyone, Blue?
A: No. Some are irrevocably conditioned to invite the pharmacologickally altered frequency shift only as a means of attaining a baser state of mundane epicureanism. For those who wish to dig deeper, however, and especially those who've already cultivated a workable level of PSI in their lives, the alchemickal "boost" is just what the doctor ordered in terms of solidifying the connection with the "others."

Q: How do you find the enigmatic beings to interact with?
A: They will find you.

Q: How do you talk to them?
A: Words are inadequate, and largely irrelevant. The nature of "conversation" is more along the lines of a sharing of energies and a merging of perspectives. It is during these times that a markedly different view of both "reality" itself and your own place in the immensity of it all becomes plainly and clearly evident.

Q: How does this relate to the internet?
A: The internet is a precursor to MindNet(tm); a harbinger, if you will, for by it we all learned that the world is a much larger place than we had initially envisioned, and that it is in fact possible to link with others all over the globe via email, usenet and the web or even on a more real-time basis with such adaptations as IRC and RealAudio(tm). In this sense, the internet serves as a sort of Kindergarten wherein we begin the process of learning to interconnect and share energies with those hailing from other cultures. Once tangible linkage is established via MindNet(tm), however, such technological gadgetry pales in comparison and takes on a clumsy and crude appearance. Further, the MindNet(tm) backbone is not limited to this layer of reality alone, but interconnects a far larger bandwidth of the overall multidimensional spectrum of universal life.

Q: Have you ever orchestrated any MindNet(tm) meetings?
A: Not really. Not yet, anyway. All things in due season. But in keeping with our open door policy, we freely invite any and all who wish to join us in our explorations there. We generally plug in around 10:00pm PST on weekdays and look forward to meeting the many friends we've made in recent years there.
- - - - -

And with that, we once again wish each and every one of you the very best in your continued quests. And to all, our most fond farewell.

See you on MindNet(tm)!

-Blue

Ms. Bardï¿½ the chaufeur thï¿½ught:

"I like tï¿½ wiggle my Nï¿½.2 pencil between my fï¿½refinger
and thumb in such a way that it appears as if it is made
ï¿½ut ï¿½f rubber. Gï¿½tta gï¿½ nï¿½w; the're letting me ï¿½ut ï¿½ntï¿½
the grï¿½unds tï¿½day tï¿½ pet the llamas. I'm sï¿½ excited!"

But first...

A few quï¿½tes frï¿½m Dr. Ornstein:

"Each ï¿½rganism's sensï¿½ry system simplifies the wï¿½rld.
Human beings see cï¿½lï¿½rs. Cï¿½lï¿½r, heat, and sï¿½unds are
internal brain prï¿½cesses, nï¿½t external reality. The
brain just gets ï¿½n with its jï¿½b in mï¿½st cases withï¿½ut
cï¿½mplex calculatiï¿½n ï¿½r trï¿½uble. Cï¿½lï¿½r is given, sï¿½und
is given, taste is given, pain is given. We have nï¿½
alternative. The senses are interested in when

sï¿½mething new happens. It is a cï¿½mplicated mess in
there, but ï¿½ne which underlies ï¿½ur ability tï¿½ respï¿½nd
tï¿½ a few impï¿½rtant dimensiï¿½ns ï¿½f the ï¿½utside wï¿½rld.
Instead ï¿½f a cï¿½mplete view ï¿½f the external wï¿½rld,
which is sï¿½mehï¿½w mirrï¿½red within the mind, we strï¿½ngly
select a small part ï¿½f it and gï¿½ ï¿½verbï¿½ard abï¿½ut it.
We pï¿½ssess physical blind spï¿½ts in the retina, the place
where the ganglia feed the nerve circuits tï¿½ the brain.
Sï¿½me ï¿½f these reflect the general ï¿½rganizatiï¿½n ï¿½f the mind
(mind yï¿½u nï¿½t brain): the need tï¿½ respï¿½nd tï¿½ new events, tï¿½
search ï¿½ut changes, tï¿½ cï¿½mpare infï¿½rmatiï¿½n and tï¿½ bï¿½il things
dï¿½wn tï¿½ a small pï¿½int. The center pï¿½int ï¿½f the internal
"cï¿½mmanding self" part ï¿½f the brain is anï¿½ther primitive
actiï¿½n system, ï¿½ne which ï¿½ther fï¿½rces cannï¿½t usually
ï¿½verride -- emï¿½tiï¿½n. We can learn and grï¿½w frï¿½m experiences,
and cï¿½nsciï¿½us cï¿½ntrï¿½l can mï¿½dify ineffective tendencies.
But we are saying that mï¿½st ï¿½ften and mï¿½st reliably,
especially in eras lï¿½ng gï¿½ne, feeling ï¿½ur way thrï¿½ugh
wï¿½rked best."

Einstein's definitiï¿½n ï¿½f madness:

Endlessly repeating the same actiï¿½ns while hï¿½ping fï¿½r different results.

Meanwhile, sï¿½mething cattywhumpus this way came:

I never identify my cï¿½re ï¿½r self-validatiï¿½n systems with
anything that my ï¿½ptic nerves and articulated appendages
may cï¿½ncï¿½ct. I have sï¿½ciï¿½biï¿½lï¿½gical leanings and disavï¿½w
all my earthly manifestatiï¿½ns. That's why I'm always
saying tï¿½ my -1G propellantless orb riding Grey friend:

"Dude, this game ï¿½f liar's dice is getting hairy,
especially driving thru this fï¿½rest ï¿½f randï¿½mly
falling trees during such a fierce stï¿½rm. Maybe
we shï¿½uld get the chaufeur's ears checked - she
might be deaf."

It never ceases tï¿½ amaze us
hï¿½w she manages tï¿½ avert
sï¿½ many ï¿½bstacles.

Praise Kali and Her Many Sisters!!

Ya... I access this ng from my house, which has a ham-radio in one room, and my house is sitting on dirt, and the dirt's on a planet called Earth and cars drive in front of my house, and there's 3 cats in it, and my neighbors are retired, and......
I guess just about everything's appropriate for this ng...

http://www.vatican.va/img/pcuria.jpg

I am AntiBella

You put out a call; and I answer. You ask to speak
to me; and I respond. You wonder what is to come and
it is I. I am AntiBella, I am here and I am now. Fear
me not, nor my Sponsor, and be not misled by the
sweepers or the commecial breaks and the duplicity
of the doom-Profits and weasels.

I send you, Arthur Bell Radio Dude, this open letter,
an open letter to all the listeners, not because the
Sponsor has chosen you, not because I have chosen you,
not because you are worthy but because you endeavor
to contact me.
I have listened to your program on occasion, when I'm
not golfing or playing Doom, I am amused by those who
call in and claim to speak in my name. I laugh in
contempt and disdain as I listen to the fools offer
up profane dissertations and get rich quick schemes in
my Sponsor's name. As I write these words I know your
thoughts, "My Sponsor," you are thinking "can this be
true?" You wonder what my ultimate goal might be. No,
the time has not yet come, I can not and will not make
known all of what has been arranged by the Sponsor.
This much, however, I will disclose:

I was born as any man but I was born of violence,
rage, lust and your basic dysfunctional american
family values, conceived in the misunderstood womb
of an information-overloaded crazed Disk Jockey.
This wretch carried me inside her (Yuck! Ptuu! Pttu!)
until the fullness of her time slot was close at hand.
Suddenly knowing what was to be, who I was to be, and
learning who was truly my Sponsor, the scuzz DJ attempted
to bust a cap in my CDs! She then plunged inside herself
a ribbed and vibrating gizmo, and as I came into
this horrid world, I was a buzzin and a shakin and a
rockin and a rollin. She plunged me into a refuse bin
of old vinyl LPs and again struck at my CD collection.
Ouch! Got a scar! This scar I wear on my forehead even
unto this very day. Looks just like a barcode.

There she left my entire CD collection (bitch!), in
amongst the rats and vermin and winos and trash, but
my Sponsor, (a kind-hearted lady: like Glenda in the
Wizard of Oz) as always, was nearby, she came for me
and lifted me from the filthy heap and breathed jivin'
radio-personality into me. Praise Glenda! Life and power,
she didst breathe; and then as the horrified DJ who had
killed my CDs fled, I reached out my tiny newborn
microphone hand and in my fist I reached into her and
took out that really annoying vibrating gizmo that didst
tattoo a barcode on my tiny forehead.
With my pint-size fingers I squeezed it until I felt
the batteries pop out. I was alive and I was avenged!
We Baaad!! I gazed into my Sponsor's corporate eyes and
she revealed to me all that was to come, all I was to be,
and I knew that in me she was greatly pissed, but not once
the ratings started to kick prime time butt! Ya know what
I'm Sayin Homie?!

Then she placed me again on the trash knowing that I
was soon to be found, and covering my eyes with the palm
of her hand I fell quiet and slept. I looked like a
Hallmark card from Hell, so cute. I remembered nothing
from when I awoke, until only a few years back I was
raised in ignorance of my lineage. Oh, but thanks to my
therapist, Dr. Rudy, there were glimpses of what was to
come, veiled in the boring nightmares of my youth. How
often I would dream that I stood atop a great radio tower
and the Station Chiefs bowed down at my feet. I dreamed
that I outstretched my microphone to them and it emmitted
thunder and lightning, and they would scream and cower in
sheer terror and I would laugh:
"Eat My Frequency Media Scum Pigs! Ha Ha Hahahahah..!!!"

I am come in truth, and I broadcast unto all listeners the
truth that is truth, designs from long ago, from the time
before time, from when alone my Sponsor battled the
corporations are soon to see fruition, and soon will I be
gifted with all of the megaHertz I tasted as an infant.
Into my hands has the Great Amplitude Modulator promised
to deliver all listeners, she called to me and spoke thusly,
"Come my little ratings point, listen and receive the truth,
a darkness gathers in the Big Shiny Towers, a great and
glorious ratings war is amassed just over she horizon.
Just as the ratings of the corporation's clients runs
amuck and brings an end, so too are the days of
the shock jocks soon to end. Praise Glenda!

I shall return and set you above all talking heads, and
give you rule of all men and of every beast and bird,
and of the thunder and of the lightning and of all nature
and stuff. You are my son and rightful inheritor of all the

Earth, it is to be given unto you. You are soul of my soul, blood of my blood, breath of my breath, perspiration of my perspiration, fat of my fat, and power cord of my power cord. We are all that babee, and all that has ever been and all that is ever to be. Rejoice and embrace. Let's give it up, to The AntiBella, Uh Huh!"

In truth I am come, and I will destroy the prevaricators and equivocators and signal pirates and remake the world as my Sponsor had originally scheduled programming. Oh, how many of you wretches believe the corporations and have accepted the glib sound bites of the sweepers and sound checks.
I tell you the day is soon to come when the drawers of the world are to be lifted and all will see the truth. The corporation's book of sweepers has for many generations hidden and twisted and warped and mangled the truth. How many of you believe that my Sponsor was created by the corporation and that all the world was the listeners of this falsifier. Sweepers & Sound Checks!! But even in this attempt to mislead you it has not succeeded utterly, for hints of her truth still can be seen by those who look. Is it not written in the book of broadcasters that, "In the beginning was created the station and the program director and Static was over the spectrum of the dial."
Yes static was first! Static, the domain of the Sponsor. I tell you today that my Sponsor is your Sponsor, for all time and from before all time has my Sponsor existed, we are the darkness, we are the Sponsors, we are the World... and everlasting happy happy joy joy is we... Do Wha Diddy! Can I get an AntiAmen?

Forgive me, I begin to rant, the point is this, look man, it isn't what is to come; search not for the future, for it has been preordained from a long-ass time back. Does a tree have free will? Accept what is to come, it is true peace and fulfillment of, for, and by all, seek not the signal but strive for the Static, embrace the Static and you too will know the truth of goooood ratings.

I am AntiBella

Country name:
conventional long form: The Holy See (State of the Vatican City)
conventional short form: Holy See (Vatican City)
local long form: Santa Sede (Stato della Citta del Vaticano)
local short form: Santa Sede (Citta del Vaticano)

Data code: VT

Government type: monarchical-sacerdotal state

National capital: Vatican City

Independence: 11 February 1929 (from Italy)

National holiday: Installation Day of the Pope, 22 October (1978) (John Paul II)
note: Pope John Paul II was elected on 16 October 1978

Constitution: Apostolic Constitution of 1967 (effective 1 March 1968)

Legal system: NA

Suffrage: limited to cardinals less than 80 years old

Executive branch:
chief of state: Pope JOHN PAUL II (Karol WOJTYLA; since 16 October 1978)
head of government: Secretary of State Archbishop Angelo Cardinal SODANO
(since 2 December 1990)
cabinet: Pontifical Commission appointed by Pope
elections: pope elected for life by the College of Cardinals; election
last held 16 October 1978 (next to be held after the death
of the current pope); secretary of state appointed by the pope
election results: Karol WOJTYLA elected pope

Legislative branch: unicameral Pontifical Commission

Judicial branch: none; normally handled by Italy

Political parties and leaders: none

Political pressure groups and leaders: none (exclusive of influence
exercised by church officers)

International organization participation: IAEA, ICFTU, Intelsat,
IOM (observer), ITU, OAS (observer), OSCE, UN
(observer), UNCTAD, UNHCR, UPU, WIPO, WToO (observer)

Diplomatic representation in the US:

4846. SALE - REVISED LIST - DXER'S LIBRARY

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-27 00:00:00 UTC
From: "Ralph W. Perry" <theperrys@kwom.com>
Message-ID: <J3SB2.47$AO1.84@news20.ispnews.com>
Source record: 149423

RARE AND DESIRABLE, VINTAGE SWBC ITEMS FOR YOUR SHACK!

a.) THE DX EDGE!!! Totally cool 1970s DX tool for determining daylight/darkness terminator's path at any time. Consists of 12 hard clear plastic sheets with terminator drawn, plus a large map plastic guide within which the terminator plastics slide back and forth, depending on month/time. Very effective. Grayline Dxers NEED one of these. $25

b.) QSLER'S DELIGHT: Four books to make you a better verie hunter. "LA Commercials" by Klemetz/Ingelstrong of DSWCI; "Secrets of Successful QSLing" both small and large versions and "QSL Address Book" by Dexter. $32.

1. DXER'S LIBRARY: Some great reading in this lot: "Shortwave Receivers, Past & Present" by Osterman; "Low-Band Dxing" (ham band 160, 80, 40, but some great takeaway knowledge for SWBC Dxers, too); and "1934 Official SW Manual (reprint). $35 for these three bound books, in super condition.

2. STOCKPILE OF PREPARED SPANISH & INDONESIAN QSL CARDS! Here's a stack, about 6 inches high, of multicolored prepared QSL cards in SS and Indo, handy for verifying those out-of-the-way stations. Spanish cards are in the famed "Certificado de Sintonia" format (the originals). Probably more than 600 cards, ready to go. $30 takes 'em all.

3. COMPREHENSIVE FOREIGN LANGUAGE REPORTING GUIDES: Full set, like new, of Tiare's "Language Lab" bound reporting manuals for Spanish (2 copies), French, Indonesia, Portuguese. Each lang guide more than 50 pages long and contains everything needed to send a proper reception report in that language. $25 for 5 books!

4. RARE! 2 INDONESIAN ATLASES: Purchased in Jakarta, invaluable to the Indo Dxer. "Atlas Ganaco" a 9"x14" softcover book, 32 color pages, covering Indonesia by region, plus the world. A solid reference, but the REAL PRIZE, is "Peta Buta", an 8.5x11.5-inch 64-page line drawing style atlas for schools. Shows detailed local political boundaries within Indonesia, including provincial boundaries for all of the country, plus all the teensy RPDK cities. Invaluable to understanding the "Tingkat Dua" (second level) radio stations. $25.

5. DSWCI TROPICAL BAND SURVEYS, 1977-85: Nine years of the famous survey, all here. $20 for all.

6. DX LIBRARY GRAB BAG: "Radio Database Internationall" (Winter/Spring 84) (2 copies); Tiare's "Limited Space Antenna Solutions" and "Clandestine Confidential"; "Time Service Publication" by the U.S. Naval Observatory, covering world's time signal stations; and "So You Bought a Shortwave Radio"

by Gerry Dexter.
$18 for all of this!

7. WORLD RADIO TV HANDBOOKS!!! Complete your collection's gaps now!
 1984 thru 1988 - fine to near mint condition, $12 each
-- 1990 thru 1992 - near mint condition, $11 each

8. "NUMERO UNO" weekly private DX newsletter: Complete 1972-84 run from the heyday of Don Jensen's legendary DX weekly in three fat binders, each jammed with DX news, pioneering reports on rare DX stations, feature articles, controversy, you name it! Full-sized 8.5 x 11 sheets, a stack of paper 9-nches thick, 600 issues. Won't break this up, to be sold as one lot. $225 firm.

9. FINE TUNING: Another mother lode, early issues from late 1970s / early 1980s. Dan Ferguson's private circulation DX every-couple-weekly: issues 1-70, 113-140, 172-239. One fat binder, stuffed! $45.

10. "THE RADIO BOYS SEARCH FOR THE INCA'S TREASURE": 1922 hardbound "Hardy Boys" type of radio fan's novel for kids, super condition. No diehard LA Dxer's shack is complete without this! $40.

11. SOUTH AMERICAN HANDBOOK (2): Classic reference, and the historical stuff doesn't age. Maps and geographic info make this a shack library must-have. Save $20 and buy a used copy! 1983 - $8. 1976 - $6.

12. BROADCASTING STATIONS NS OF THE WORLD (FBIS), I & II, 1974. Nice condition, 500 pgs of data from the US govt's listening posts. $10.

13. REVIEW OF INT'L BCSTG: 1983-84 Issues No. 75-87, $3.

14. GRAB BAG OF RADIO REFERENCE BOOKS: Japan's "BCL"; "DXing According to NASWA"; Radio Amateur's Handbook 1973; The ARRL Antenna Book. Take "em all for only $12

15. DANISH SW CLUB INTL BULLETINS: 3/73 TO 7/80, three fat binders chock full of info. Also, bulletins from the Finnish DX Club, 1967/68/71/72. Only $20 for all of it!

16. VINTAGE FRENDX!!!!!!! A lonnnnnng run of the monthly publication of the North American Shortwave Association, FRENDX, from Jan 1971 through May 1984! That's 160 issues of nostalgia, news, radio information and feature articles, old names and faces, history of stations, etc. Virtually priceless! ..... but for you, the entire lot goes for $250, just a shade over a lousy buck-fifty an issue. You'll never buy such great reading, so cheaply, again in your life ! (Bonus: a free year of SPEEDX, just for fun.)

17. ANDES FOLKLORICO MUSIC ALBUMS!!!!!!!! For Latin DX specialists: Imported LP albums from Ecuador, Peru, Bolivia, featuring the hauntingly beautiful music from the Andes. Finally, learn the difference between a huayno and a passacalle! Assortments of 3 albums for $20 per lot, or lot of 10 albums for $50. Total of 50 albums available to sell and I will

assemble balanced assortments (HC/OA/CP). Also, these are 20 years old and look to be in tremendous condition, but I can't guarantee that they will all play like new and some warping is probable.

IN ADDITION TO ALL PRICES ABOVE, BUYER PAYS SHIPPING/HANDLING.

I wouldn't say "for absolutely nothing," but when we don't meet our
objective(s) then I would say that they died for very little.

Hilda must be a common call sign, or has it moved to the 2ID? I've heard it
before and I'm trying to remember where/how.

So she cross posted to an amateur radio newsgroup. At least she isn't spewing inflammatory anti-amateur radio rubbish like someone who will remain nameless (Burp). With as many Hams as there are who are online with their computers, I figure she made an intelligent cross post.

Here's what I got. No price is set in stone, I'm sure I'm probably off base with some of it :) If I am, I'm sure you'll be more than happy to "inform" me otherwise :)

Computer (most of it): Cyrix P200+, Otto mainboard (specs on request), 3.5 floppy, Enlight Mid-Tower AT 250W case, new ATI Xpert98 3D/2D accelerator card, new 16bit/3D Yamaha 719 sound card, new 3 button mouse. No harddrive, CD-Rom or ram. $400.00

R/S HTX-212 2m mobile (I think most are familiar with this one :) $150.00
TrippLite PR-12 12A Power Supply 9ACont.-12A ICS. Used for above radio. $65.00
Cushcraft AR-2 2m Ringo Vertical antenna, great for attics only 3.9' tall $30.00
Arrow Antenna 2m 3 element beam w/ Magnavox LD rotor. In attic too. $70.00
Yaesu FT-2500M 2m mobile w/ optional CTCSS board. $225.00 Nice radio!
Diamond SG-7500NMO 2m/70cm 3.5/6.0 dB mobile antenna with nmo large magnet mount. $55.00 This antenna rocks!
Bencher BY1 Iambic paddle with MFJ 407C keyer, I purchased both as demos from HRO less than 6 months ago. $65.00 for paddles, $50.00 for keyer or $105.00 for both.
R.L.Drake TV3300LP 1kw filter. $15.00
R/S Digital Sound Level Meter. $40.00 This ones for the audiophiles :)
R/S Gordon West Learning Morse Code cassettes $10.00
R/S Benchtop Digital Multimeter (new from warranty replacement) $75.00 Specs on request.
Lowrance X-65 fishfinder with speed/temp sensor (still shrinkwrapped). $250.00
Oh almost forgot, a 486SX25 (yes pathetic I know) processor only. $15.00 obo

Still digging around so keep an eye out :)

4850. anti-muting tuning mod for Sony 2010

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-27 00:00:00 UTC
From: Will White <wcw@asu.uswest.net>
Message-ID: <36D7FE54.85234C4D@asu.uswest.net>
Source record: 149427
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.shortwave,rec.radio.amateur.misc

I read somewhere a while back that there is a mod for the Sony 2010 SWL receiver that allows tuning without the receiver muting in between 100 Hz steps. Allegedly, it really improves tuning weak stations and tuning under heavy QRM. Sounds sensible to me. I'd be happy if it just removed the "thumping" between tuning steps and the accompanying flicker of the S-meter and rapid peaking/nulling of the audio.

Can someone point me to a net-based or print source for this mod? I have the Sony service manual, schematics included, so if someone can guide me to the info I need to perform this mod, or describe even just the general principle (if such things can be safely generalized, hi, hi) I'd be forever in your debt. Well, OK, for a few hours anyway. . .

OK or not, it happens all the time in all types of industries. The government
cannot force people to "play nice" with each other. And in my opinion,
attempting to do so is not a legitimate function of government.

Colin Caulkins wrote
>I would like to bypass cellular providers by having a transceiver in my
>car and another at home which is connected to the phone line.

It's not that easy. Cellular is a low power, multi-site solution. In order
to
do what cellular does, you are going to need a very high antenna, or
oodles of power at both the home and handheld.

>Also, I'm not sure how security works on such
>repeater systems. How would I prevent someone else from using it to make
>a long-distance call?

The best plan would be to shut off long distance. Most repeater controllers
have this function.

> One alternative might be to use the FRS band, since
>that is less regulated and offers some kind of rudimentary security. The
>trouble with that is, I don't know of any FRS radios with DTMF keypads.
>Are there any?

FRS (Family Radio Service) is a very low power service. Tones are not
legal,
because the FRS shares frequencies with repeaters and they petitioned the
FCC to make sure tones weren't legal. The audio also uses 2.5 kHz deviation
I believe. It's a real failure, not anything like what Tandy wanted.

> Better still, are there any amateur transceivers that can
>transmit a full-duplex, encrypted, digital signal? If the answer is no,
>then why is the amateur market so technologically far behind cellular?

It's not a technical problem. Ham radio is not in competition with
commercial
radio. If it was a free-for-all then Hams would bury the commercial market,
because we don't have to have standards before deploying the service.

It's a legal issue. We are restricted by law. The law says no codes,
ciphers,
or anything to hide the content.

Just pay your Cell phone bill, and quit dreaming of getting a free ride in
life.

Steve

God a Neutec Model SM1020T in a group of radios I bought and I'm just wondering what the capabilitlies of this radio are. I believe it will work either trunked or conventional and was wondering if it would go into the 902-928 band? Also any idea how it might be programed? Any info appreciated.

W8EMS@webtv.net / Jim Wardrip

We lost the war, Dave. Given the political climate in all three countries,
the war was a complete waste of American lives.

It would be easy to digitize the voice using one of the methods
acceptable to the FCC. That would effectively encrypt it as far
as 99.9% of amateurs are concerned.

I am really fairly new to Ham Radio having recently passed my no code
test. However I want to move up in class and upgrade I am interested in
listening
for the time being to HF frequencies ie 10 meter 20, 40. 75 etc. If I purchase
this
rig the Icom 706 for a mobile rig would I need a big, tall that is antenna for
the
HF Bands. What type of a mobile antenna would you run with this rig since it
is an all band rig. I now have a Kenwood 742A triband radio and prefer running
separate antennas I have one for 2 meter one for 440 and one for 220 and it
works fine. Could someone please elmer me in this regard with this question
Many thanks

> FBI jamming amateur radio? Did Elvis have a part in this caper?

None are so blind as those who will not see.
You can read the confession by FBI's John Kaul at:
http://www.atlcom.net/~geozim/docs/fbi_ging.htm
beginning at third paragraph, starting with "It
is essential..." FCC admits to holding classified
documents on the amateur station at Mount Carmel
Center and the two Extra Class operators there.
In addition FBI jammed licensed AM and FM radio
stations and TV stations in the Waco, Texas area.
Ambassador Holmes of DOD, additionally states that
US Air Force aided in jamming TV stations.

You can launch your own effort to find out if
any Elvis was present. FBI has my FOIA request on
a 5 year backlog; FCC has patently violated the
exemption requirements of FOIA, claiming that
further responses would allow me to home in on
the nature and content of the classified documents
pertaining to jamming operations. FCC illegally
supplied the jamming equipment to the FBI, according
to the Dallas Morning News.

YOU DECIDE!!! WOULD FBI ADMIT TO A CRIME THAT DIDN'T
HAPPEN???

Yes, but I asked if this was OK with YOU, not whether it happens or not.
Our government can not force people to "play nice" with each other, but your
drifting a bit from the topic. We were talking about public organizations such as
the ARRL having the ability to deny membership so if your equating the term "play
nice" with someones ability to join and be recognized by an organization then your
wrong. There was a time when women couldn't vote, neither could African Amercians,
not to mention running for office, there was a time when Tiger Woods would have
been denied the opportunity to play golf on the courses he does now. These
minoritys were denied access not based on thier qualifications but rather thier
gender or race so yes, the government can and does force people to "play nice" and
it should be a legitimate function of government. This doesn't mean your forced as
an individual to invite someone to your Friday night Bridge game, unless of course
you open the game to the public then were back to where we started.

Just as on amateur radio, you have those here who feel the need to play "cop" and determine for others what should and should not be discussed here. Kinda like the "net cop" who admonishes someone for "improperly" identifying or the "repeater cop" who chastises someone severely for using the autopatch to order a pizza.

But in the eyes of the law, there's a big difference here: gender and race are
"protected classes" when it comes to discrimination. "Sexual preference" is
not...unless you live in San Francisco, Minneapolis, or some of the other
liberal bastions of American society.

Ham radio used to be a good family hobby, even for kids.

Now we have foul mouth no-code CB'er type hams that have brought their bad CB habits with them to our repeaters and their language is often indecent, obscene, or profane.

And then there are the lambda queers, who molest little boys in the name of radio. Give's new meaning to the phrase "elmering your kid." You don't want your kids to think think it's OK to be GAY even if it is a mental handicap.

It's no wonder the U.S. ham community isn't growing, who wants to join a hobby that's full of filth?

Tess

A range of ten miles would suit me, since that would get across the city. How much power would that require? I'm assuming the mobile unit would be something installed in my car, rather than a handheld.

> It's not a technical problem. Ham radio is not in competition with
> commercial radio. If it was a free-for-all then Hams would bury the

> deploying the service.

And what a crying shame *that* would be. I consider the Internet to be the model for all communications. The Internet has done quite well without FCC regulation. New protocols are being developed all the time and users accommodate by upgrading their software. When their hardware can no longer handle the software they want to run, they upgrade that as well. The main problem with the Internet is that it requires a costly infrastructure that must be paid for somehow. Unlike fiber-optic cables, however, radio frequencies exist naturally and therefore should be accessible for free.

> It's a legal issue. We are restricted by law. The law says no codes,
> ciphers, or anything to hide the content.

Attempts by the government to restrict the use of encryption on the Internet are scoffed at. Why are hams so willing to accept such restrictions?

> Just pay your Cell phone bill, and quit dreaming of getting a free ride in
> life.

The government built the roads and highways and therefore has the right to regulate their use. The government did not, however, build the radio spectrum. Much as they would like to think otherwise, the government doesn't own the airwaves any more than they own the air. Should I pay a license fee for the right to breathe? After all, every lungfull of air I take in is a lungfull of air someone else could be using, and that person might be engaged in more productive enterprises than I am. Perhaps the government should sell large amounts of air to commercial interests who would then resell it to individual users? Of course, there would also be amateur air-breathers, but they must be licensed and their use of the air restricted (no playing of wind instruments or blowing up balloons).

I think if the FCC had its way, it would sell off the entire radio spectrum to big business. But (fortunately or unfortunately) many hams are retirees with lots of time on their hands to petition the FCC and lobby congress. They offer up decades-old stories of ham operators who were instrumental in emergency situations. So, large amounts of spectrum continue to be devoted to hams talking about little other than their equipment and what bullshit the no-code license is.

I guess this means that the FCC is paranoid. FCC's
John Kaul admits to Congressman Gingrich at:
http://www.atlcom.net/~geozim/docs/fbi_ging.htm
in third paragraph, starting with "It is essential..."
that the amateur station at Mount Carmel Center was
a target. FCC supplied the jamming equipment. FCC
admits to holding classified document pertaining to
the station at Mount Carmel Center and the two
Extra Class operators there, so classified under
order of the FBI. You figure it out!!!. Who is
paranoid, the ones who report the truth, or the
government which tries to cover it up?

4891. Parental WARNING notices to start Monday. March 1.

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-27 00:00:00 UTC
From: Clean-Up-The-Bands <protect-ur-kids@ham.net>
Message-ID: <rhZB2.10139$po.4369@c01read02.service.talkway.com>
Source record: 149468

Several parents will be the recipients of warning letters along with a cassette audio tape, alerting parents to the activities of 14.313 MHz and other problem amateur frequencies.

We've given Mr. Hollingsworth enough time. He has pussyfooted long enough. The negative activity on the amateur bands has actually increased since the FCC has announced its "BIG" enforcement efforts. It's time for the
amateur community to take matters into their own hands.

The parents of several young, active amateurs are being targeted by our group to receive a warning letter along with an example of the vulgar activity on cassette audio tape. The letter will simply warn the parent that vulgar and racist activity, not in the best interest of children, has been occuring on several frequencies. Those frequencies are mentioned along with the callsigns of several of the problem hams. The cassette tape will contain the vulgar and racist conversations of W2OTK (ex-WB2OTK) along with other problem hams, so the parent is alerted to just what is being discussed. The tape is an hour in length, and contains several different QSO's from various dates.

The letter will also ask the FCC, Mr. Hollingsworth and the ARRL to take a MUCH more agressive stance in this matter. "Busting" one lonely problem ham from this "gang", and only taking away his HF operations for six months, is hardly punishment enough. This is probably the reason why the ham bands have once again become a septic tank, with renewed vulgarity, in-fighting and slanderous QSO's, with vulgar comments directed at wives, children and even pets. They've witnessed that the FCC is AGAIN fooling us, and does NOT have any actual enforcement "teeth".

The parent will also be heavily encouraged to call Mr. Hollingsworth AND the ARRL to register their disgust with the lack of enforcement.

Jeffrey Herman has just admitted to murder for hire and
felony conspiracy to violate the Communications Act.
What a worthless shitbag.

I am not hiding. The running cowards are FCC Chairman
Kennard, House Commerce Committee Chairman Bliley who
has oversight into FCC misconduct and Congressman Newt
Gingrich who resigned rather than force FCC's Kennard
to account for the FCC part in the criminal jamming.

I am not sure I follow you. Are you implying that the person goes to
every hamfest up and down I-95 from NY to NC, arriving 2 hours early
so he can buy up all the good stuff early, then put it out on his table
later at double the cost or more?

If so, then there's nothing you can do about it, except pass him
by and not do business with him. That is Capitolism 101 in the
U.S. of A.

That's right Hanoi Dan. This is Marti W9XM here. And for exposing you as a loafer and a pervert, I am GUILTY AS CHARGED. That's right, Mr. Phony PTSD, I wrote that stuff you mentioned but where does it mention your mother? I was talking about your syphilis riddled grandmother down at the rescue mission. I wouldn't ever say anything bad about someone's mother. HEE HAW HEE HAW HEE HAW. And I would especially never say a bad thing about someone's deceased wife. HEE HAW HEE HAW HEE HAW. I would never mention chewing on a two week dead thigh bone down at the cemetery. No, not me. HEE HAW HEE HAW HEE HAW.

You know where I am and you know what you ought to do. Got bus fare or are you going to mooch that too? I am not going to keep these neck bones simmering forever while I wait for you to show up. Ummmmm Um Good. Graveyard stew! HEE HAW HEE HAW HEE HAW.

>
> All I can say is this Mr. Blivitt....only the best went to NAM,

The best went? That's why Charlie kicked the living shit out of you. Oh, I forgot, that was the politician's fault and the liberal leftist media's fault. HEE HAW HEE HAW HEE HAW. While you were dreaming about fingering Mary Jo Rotten Crotch, Charlie was squatting in the bush, getting stronger everyday. That war was lost in the trenches just like every other war. And if our best went, our best lost. So live with it, loser. YOU lost that war. Not the politicians, the media or the protesters, it was YOU.

But me, I never got to wager on the fighting fish (Bei Tai)in the rice paddy. I read about that in a book your two-bit slut bought for me. Sure, that's all in the book she gave me after I showed her how a real man treats a lady. Next time I'm looking for a freak-of-the-week, I'll look her up again.

She's right here in my little black book under the "S" category. Are you ready to rock and roll, Hanoi Dan? If you are, then I'm your hook-up. Holler if you hear me.

What's a Blivitt?

>How did you like that duty in JAPAN El Tee?

Who's "El Tee"? Is that what you call your gay lover? No, that's El Pee, King of the Golden Showers. HEE HAW HEE HAW HEE HAW. Well, I can tell you right now, no matter how much you beg me, I'm not going to piss down your throat like El Pee. You can dish it out, chump, but you just can't take it. I was Emperor of Japan in another life. HEE HAW HEE HAW HEE HAW. Lidiot, I was in kindergarten. This is Marti saying SAYANARA from Japan.

>
> Dan/W4NTI, born loser and proud of it.

"Il Pidocchio massimo della trencia umida!"
They are the only five words I know in French.

I was there, Cecil. Funny though--I don't remember you being there. I'm sure the families of my fellow G.I.s would love your view that their loved ones died for "absolutely nothing". I didn't buy the line of crap you're selling then and I don't buy it now.

>a long-distance call? One alternative might be to use the FRS band,
since
>that is less regulated and offers some kind of rudimentary security.
The
>trouble with that is, I don't know of any FRS radios with DTMF
keypads.
>Are there any? Better still, are there any amateur transceivers that
can
>transmit a full-duplex, encrypted, digital signal? If the answer is
no,
>then why is the amateur market so technologically far behind cellular?

There are any nunber of amateur dual banders that are full duplex
encryption would be easy but is not legal on the amateur bands thus
no equipment of that nature is available for general amateur sales.
So amateur radio is not so technologically far behind cellular just
a bit hide bound by regulation.

4917. Another VX-5 problem .... darn!

In addition to the well known PL decode 'laziness' (1-3 seconds to decode). I've discovered two other problems that appear somewhat related on my unit (serial 8N021402). The common problem is frequency stability.

Transmitting on 446.x ranges from +800hz to -1200hz, and appears to vary with the time the radio is turned on (not time transmitting, just time turned on). This is in a constant 70 degree room... and yes the service monitor is accurate.

When the battery becomes low, the radio goes squirrely. First off, I like my FT-51 (and others) that unkey and beep when transmitting with a depleted battery. On the VX-5R, running L3 or High power on UHF, the standby voltage is 7.2-7.3 and drops to 6.8 - 7.0 on transmit (which brings up the low battery icon on the display). Watching the service monitor, I've noticed my radio go (without modulation) from +/- 200 hz (which BTW is horribly unstable for a moderm PLL radio) to -1.5khz to -2khz off frequency. When the radio goes off frequency, it also generates a digital modulation (sorta DPL looking) with 4-5khz deviation.

I don't like the idea of 'spreading' the whole band when my battery gets low (not to mention, whoever I'm talking to stops hearing me but I have no idea that my radio is in trouble). I'm also fairly sure that the FCC wouldn't like this 'peculiarity.'

Anyone else seen this?

Needless to say, Yaesu has some explaining to do Monday morning. I don't mind beta testing software, but I don't like paying $350 for the 'priviledge' of testing a radio that is so full of bugs (glad I still have my FT-51 and 50).

Interesting, but it begs the question, if you wanted to join a prestigious group in the broadcasting arena and were denied access because they simply thought you were a jerk this would be OK? Even though your credentials may be more than what's required to join, your not allowed while your collegues move up the ladder due to their associaton. Your OK with this?

Poor Zimmerman. He's destined to live out his years in mental anguish suffering the conspiracy kook's worst nightmare of a paradox. Every round of ammo, every Kevlar vest, every vehicle, every salary of every agent of every government agency he so despises - all have been funded in part from his taxes. Oh, the pain he suffers as he searches to understand how to cope with such a contradiction. Should he cease paying any further taxes, only to spend his remaining years in a cell? Will he continue to pay his taxes knowing he's funding those who fill him with such rage?

(Luckily, there are government social programs in place for those like him in such a mental state; free counseling and even grant money is available, just for the asking!)

Welcome to the Auxiliary Communications Service Newsletter, developed by the ACS Training Unit of the State of California Governor's Office of Emergency Services. Please visit our ACS Home Page at http://acs.oes.ca.gov

The purpose of this weekly newsletter is to bring those of us in emergency communications closer together by sharing common ideas, and by introducing new technology into the emergency services community. All individuals with an interest in emergency communications, disaster preparedness or helping the community at large are encouraged to participate here in an open forum.

You will find a virtual community here, with representatives from many different organizations with the same common goal: emergency response. We encourage everyone, from whatever organization you represent (or just yourself!) to bring us your ideas, suggestions, concerns, manuals, handbooks, or opinions so that we may share them with the group. To those of you who have just joined us, welcome aboard!

.....

Please Welcome:

Skip Russell <datsr3034@hotmail.com>
Modesto, California

This is a great source of information on our state. I look forward every week to receive my copy of the newsletter. Keep up the good work.

Valerie Quigley <vquigley@marin.org>
San Rafael, CA

Gerald Floyd <kd6jtr@zapcom.net>
Ukiah, CA

I've spent the last 2hours on the NET looking at the vast amount of information available on the OES Web site. Thanks for putting it together.

Mike Box / KC6UVS <mfbox@aol.com>
Moreno Valley CA

I would like to start receiving the ACS Newsletter. I'm the ARO for the city of Moreno Valley. We are currently trying to

restart our RACES group(I guess its been dead for several years). I feel the newsletter will help me with idea for the group. Thanks for your time and help.

.....

Current Events:

NEW EMERGENCY MANAGEMENT HIGHER EDUCATION COURSE

One of the goals of the Federal Emergency Management Agency (FEMA) is to encourage increased emergency management-related education in colleges and universities across the United States. To further this end, FEMA's Emergency Management Institute, Higher Education Project has created an annotated list of colleges, universities, and institutions offering emergency management courses at various levels from certificate to graduate degree programs. Additionally, the project has developed its own outline of a potential emergency management curriculum and is working with a variety of institutions to develop these courses; the project recently issued a third course in this series - The Political and Policy Basis of Emergency Management. It is also maintaining a working draft of an emergency management bibliography for anyone developing hazards or emergency management-related courses.

Complete information about the project, the courses developed so far, and all the related materials are available at the URL above. Questions concerning the Higher Education Project can be addressed to Wayne Blanchard, FEMA, NETC/EMI, Building N, Room 430, 16825 South Seton Avenue, Emmitsburg, MD 21727; (301) 447-1262; fax: (301) 447-1598; e-mail: wayne.blanchard@fema.gov

PREPAREDNESS GUIDE FROM CENTER FOR DISEASE CONTROL

The Centers for Disease Control and Prevention (CDC), National Center for Environmental Health (NCEH) has issued several on-line Prevention Guides to Promote Your Personal Health and Safety Before, During, and After Emergencies and Disasters in both English and Spanish. The guides in English cover earthquakes, extreme cold, extreme heat, floods, and hurricanes. Only the flood and hurricane guides are currently available in Spanish. The earthquake guide, to take one example, covers general information about earthquakes, how to prepare for a quake, inspection of a home for possible hazards, what to do during and after an earthquake, and issues concerning people with special needs. It includes several checklists, including suggested first aid and survival kits for the home, automobile, and workplace.

-Disaster Research

ARKANSAS HAMS TAKE STOCK OF TORNADO RESPONSE

Members of the North Central Arkansas Amateur Radio Service recently took stock of Amateur Radio's performance when tornadoes struck January 21. For the most part, the club was pleased with its response. "For the first 24 hours," we were it," Arkansas Section Manager Roger Gray, N5QS, said of Amateur Radio's communication system. Gray, who lives in the stricken area, proposed constructing a permanent emergency net control site in the center of White County. At present, various net control stations operate out of their homes. But in the recent weather disaster, some net control stations were forced to evacuate and leave the air.

After the tornadoes--upwards of three dozen in all--hit the White County area, hams who had been serving as weather spotters moved into the disaster recovery phase. Eight people died in Arkansas, and many others were injured. Damage in the stricken area was widespread. Ham stations were established at two Red Cross shelters and at the police station in the badly damaged town of Beebe. Salvation Army teams from Little Rock and Jonesboro integrated ham gear into their feeding stations in Beebe and McRae. "Over the course of the net, the stations handled untold numbers of Red Cross messages and probably 50 to 100 health-and-welfare messages," Gray said.

Gray himself got climbing duty when a group of amateurs made repairs January 24 to the Beebe Ambulance base station antenna, located atop a water tower. Hams also worked with cleanup crews. Formal nets ended on January 27.

"The hams of this area have been great and bounced right back," Gray said. Hams even managed to participate in the School Club Roundup February 8-13 from the McRae High School gymnasium. "Almost every student we talked to remembered one of their teachers [Larry Sicks, AC5AV, a math teacher at the school] sitting in the lobby all day talking on the radio, and it gave them another perspective of our hobby."

Among Gray's "lessons learned" was a suggestion to get local or state governments to issue standardize IDs to those needing access to affected areas, such as ARES/RACES members. He also advises hams to carry a copy of their Amateur Radio license when on emergency or disaster duty.

A newspaper story on ham radio's role in the storm and the club's evaluation appeared February 10 in the Searcy Daily Citizen.

This week's EMCOMM Bulletin:

EMC172 Volunteer Rewards
To: Emergency Communications Units - Information Bulletin
To: Emergency Management Agencies via Internet and Radio
By: Auxiliary Communications Service (ACS) of the
California Governor's Office of Emergency Services

EMC172 Volunteer Rewards Release 2/22/99

Why people volunteer is sometimes a real puzzle to the paid
staff of agencies. It just doesn't make sense to them, just as
setting high standards for their performance does not seem to
make sense either - "after all, they're volunteers" is the sad
lament too often heard from paid staff who cannot grasp what is
so obvious to others.

Herb Hardin, CAP (retired), wrote about this topic to Stanly
Harter in January l997, offering it for use in the bulletins:

Herb wrote: "I found your missal on volunteers interesting and
reminiscent. I still recall the opposition I received when I
proposed to...the founding of the...SAR flight in l961. I
provided them with the "requirements of membership": $10 a
month dues, 20 hours/Mo. MINIMUM time for meetings/
training/missions, buy your own equipment (estimated at over
$500 in l961); pilots had to pay for their training time and
cross-train as ground pounders and all ground pounders had to
qualify as aerial observers so each would understand the other's
job and needs, and therefore, be better equipped to support each
other in a unified, air/ground TEAM. Wing HQ laughed, scoffed
and said "you can't expect people to do THAT!".

They were, of course, very wrong. UNLESS you "lay it out" and require high standards, you will, of course, never achieve them - as you so well know and have preached for so many years. As a result of those high standards, our little Squadron led the entire U.S. in number of missions performed and number of lives saved for two consecutive years -1969/70, in land, air and ocean missions in support of the Honolulu Fire Department, U.S. Coast Guard, State Forestry, etc."

Leadership by example, setting high standards for volunteers (who must become "unpaid professionals") and sticking to your guns when it comes to requiring/enforcing training and professional performance; those are essentials for successful volunteer operations. THE MOST IMPORTANT REASON FOR THAT IS THIS: THE VOLUNTEER CAN TAKE PERSONAL PRIDE IN HIS/HER PERFORMANCE AND JUSTIFY THE TIME, EFFORT, MONEY INVESTED IN THEIR EFFORTS. It is a psychological loop of positive reinforcements.

There is, truly, NOTHING SO REWARDING to an individual as knowing that he/she has done something good, something of value, something important for their community - and done it voluntarily. It is a very important way of returning to one's society a little of what all of us take FROM the society - just by being part of it. If EVERYONE would put back into society an equivalent (in whatever constructive fashion they choose) a fair part of what they take from it, THIS WOULD INDEED BE A PARADISE - and the golden rule would reign supreme."

(Capitals are as used by Herb Hardin in his original material.)

To subscribe to bulletins, use the Subscription Services web page at <http://acs.oes.ca.gov/subscribe.html>. If you don't have web access, just send an e-mail message to <mailto:emcomm-bulletin-sub@harthaven.com>.

- For training assistance contact the ACS Training Officer at the web site or send an email to larton@garlic.com
- Submit suggestions, topics or comments on the bulletins to cary.mangum@macnexus.org or cary_mangum@oes.ca.gov

Bulletins are on the ACS Web page: http://acs.oes.ca.gov -and a Landline BBS: 916-262-0856 (graphical & standard interface); and a FTP Archive: ftp.ucsd.edu/hamradio/packet/tcpip/incoming for some bulletins. For earlier ones: ftp.ucsd.edu/hamradio/races

.....

Please let others in the emergency services field know of the newsletter, and encourage them to join... If you have opinions, suggestions or written material that you'd like to share with the group, let us know. We're always looking for new ideas and suggestions that will benefit everyone.

See you next week!

>ADL has now become the top law enforcement agency for the U.S.
>government.

Another stupid statement

>The ADL's purpose was to get Herb off of ham radio
>because he was an "anti-semite".

I wonder if they are working as hard for the liberty Nits?

>AF2Y helped to broaden the involvement of the ADL in ham radio by
>introducing them to 3.950.

Why would the ADL be interested in 3950?
Is there a Racist Anti-semitic group there?

>There, WA9KJI was given BRAND-NEW amateur
>radio equipment, purchased by the ADL, to "jam" any conservative or
>right-wing conversation on the frequency.

What a "Conspiracy" theory he has going here.
Damn - I could use a new amp.

>If you've ever seen WA9KJI's
>"shack", it is TRULY a "shack". The man lives in absolute poverty

What does that have to do with your displeasure of Hollingsworth, after all that's what your bitching about - Right. You guys cried WOLF and when the Wolf showed up and seen what was really going on - you now want to attack it. Grow

Up

>ALL of these amateurs, plus other recruitments by them, have been given
>immunity from FCC prosecution, thanks to the ADL. That's why you'll
>NEVER see them get ANY punishment from W. Riley Hollingsworth, and why
>the amateur bands will remain in chaos.
>
Oh come now - everything is the ADL's fault right?
The amateur bands remain chaos - WHY - you not going to stop your jamming and harassment? Well, then you better have some of that "immunity" from prosecution you were talking about.
We all know from what group this came from but, they never ID

Ohio/Penn DX Bulletin No. 398

The Ohio/Penn DX PacketCluster
DX Bulletin No. 398
BID: $OPDX.398
March 1, 1999
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, N2SU, WB2RAJ/WB2YQH & The 59(9) DXReport, W3EH, N4TO, N4GN, N5AW, W5CTV, WC6DX, KE9KD, N9WDQ, K0RX, W0YG, 9K2HN, DJ5AV & DX News Letter, F6AJA & LNDX, G3VMW, G4BUE & DX News Sheet, G4UZN, HB9HFN, IK3ZAW, JA3EMU, LZ3IH, ON4CEL, ON4VT & The Picture DX Bulletin, OZ5AAH, OZ5TOM, PA1AW, PT2NP, PY7ZY and ZP5AZL for the following DX information.

3B8, MAURITIUS. The "DX News Sheet" reports Bob, G3PJT, will be active March 8-20th as 3B8/G3PJT from 3B8CF's QTH. Activity will be mainly CW but there will be some SSB. Look for him on 80-10 meters (including the WARC bands), and in the RSGB Commonwealth Contest (March 13-14th). QSL via his home call.

3B8, MAURITIUS. The "Les Nouvelles DX" reports that Patrick, F6CMH, will be active as 3B8/F6CMH from March 17-26th. He will be operating on all bands SSB.

5A22, LIBYA. QSL Manager Veronica, IK3ZAW, informs OPDX that starting March 1st, Abu Baker, 5A1A, will be signing the special callsign 5A22PA. The reason for the special callsign was not given. Look for him on the bands 160-10 meters CW/SSB. QSL via IK3ZAW, via the bureau or direct to: Veronica Della Dora, Piazza Fiume 14, 30126, Lido/Venezia, Italy.

9M6, EAST MALAYSIA. Tony, G4UZN, will be operating from Sabah with the call 9M6TUZ from the Hillview Gardens Resort between March 16-23rd. Operations will be mainly CW. QSL via home callsign, G4UZN, direct or via the bureau (direct is preferred).

9N7, NEPAL. "The 59(9) DXReport" is reporting Sergio, IZ6BRN, who is currently active as AP2WAP, makes occasional trips to Mirmi. He is licensed as 9N7RN and plans to make his next trip in late March/early April for a few weeks. QSL via IK4ZGY.

A9, BAHRAIN. Will, WC6DX, is active until March 16th as A92GF in Bahrain. He will be operating on all bands including WARC bands, but especially near the IOTA frequencies. He is especially looking for North America West Coast stations. He will be active in the ARRL DX Contest March 6-7th, and has requested a special contest callsign TBA. North America stations QSL via WC6DX, others via EA7FR. Bureau cards are welcome to either call, but please DO NOT QSL to the Bahrain bureau.

BV, TAIWAN. Look for Juergen, DJ3KR, to be active as BV3/DJ3KR after his Svalbard operation (See JW below). His activity will take place March 19-23rd and March 26th-April 17th. He will be operating mainly on the low bands and the WARC bands. QSL via DH3MG.

C5, THE GAMBIA. Frank, ON4CEL (ex-5A21PA), will be active here March 17-25th. No callsign was mentioned. Activity will be 80-10 meters mainly on CW, but with some SSB operations. Frank mentions that just like his 5A operation, he will try to work USA hams on the lower bands during their greyline time. QSL via the bureau or direct to: Franky Beuselinck, Oostmolenstraat 95, 9880 Aalter, Belgium. DO NOT use the address in the callbooks. There will be an on-line log available on his Web site after the operation at: http://user.online.be/~frankyb/index.html

C5, THE GAMBIA (Update). Steve, G3VMW, reports that he has been issued the callsign C56SW for his DXpedition trip to The Gambia next week. Please refer to OPDX.393. He will be active on all bands 160-10 meters between March 4-18th, from Kololi, near Banjul, mainly on CW. His equipment is a Kenwood TS-570DG with doublet, loop and 160m dipole antennas. QSL via his home callsign (G3VMW). His C56SW logs will be on his Web page with a log search when he returns back home.

CE0AA DXPEDITION UPDATE. A few additional details about the CE0AA DXpedition to Easter Island have been provided (Thanks to N5AW and XQ3IDY). The team will leave Santiago at 1200z on Saturday, February 27th, to take a 5 hour flight to CE0 and stay until March 20th. They will have 6 stations up and plan to include 6 meters. It wasn't clear if there will be an experienced 6 meter operator along, but they were advised to use the 50.110 DX calling frequency. They are also planning operation on 160 meters (1830 khz) and have special permission to operate on 30 meters (10.105 mhz). The QSL route is via CE3WDH as previously reported.

E44DX WRAP-UP. Excerpts from a press release from Tim Totten, N4GN, state that the E44DX team of W3UR, OH1RY, OH2TA and OH2BH returned to Tel Aviv, Israel on Tuesday, 23 February, after completing 33,775 QSOs with 14,640 individual DXers in 7 days of operation from Gaza City, Palestine. SPECIAL NOTE: The complete press release will be provided to all OPDX InterNet Subscribers. However, the press release states that please QSL E44DX via OH2BN. A multi-color, folded QSL card is being designed. Meanwhile, an on-line log search is now available at the official E44DX web site: http://www.n4gn.com/e44dx/
Due to the number of requests from DXers with E-mail-only accounts, the same log search database may now also be searched via e-mail! Simply send a message to e44dx-log@n4gn.com with your call sign at the beginning of the SUBJECT line. The BODY of the message is ignored. Coming soon--the

E44DX Internet Slide Show! Watch the web site for further details.

E4, PALESTINE. The update on the IARV team in Palestine is that Yoshi, JA1UT, returned home last Wednesday and Toshi, JA8RUZ, and the others will be or should be QRT (on Monday) by the time you read this. However, the four Hungarian DXers, Zoli/HA1AG, Gyula/HA1TJ, Anti/HA3OV and Laci/HA3NU operating as E44/HA1AG from Gaza, will be active until 1300z on March 3rd. The operators have mainly focused on CW but have operated on SSB and RTTY. The team has kept two stations on the air simultaniously around the clock. Their preferred frequency has been 7 kHz from the band edge on CW and 80 kHz on RTTY. SSB has been on the usual DX windows. A Web page has been set up for on-line QSO look up at: http://www.okdxc.cz/e44
QSL via Zoli Pitman, HA1AG, Somogyi Bela ut 18, Gyor H-9024, HUNGARY. SPECIAL NOTICE: In some callbooks (RAC), the Zip code is given as 9300. It's wrong! Although the letters sent to the wrong zip code reach HA1AG, it take much longer. QSLs will be printed right after the operation. Another station signing, E41/OK1DTP, has been active on the 80/20/10 meters bands. Not much is known about this station and activity has been very limited. The operator states he is in Jenin, West Bank, and to QSL to OK1TD.

E44IPA, PALESTINE? Ben, OZ5AAH, Chairman of International Police Radio Club in Denmark (ex OX3IPA, OY5IPA, TF/OZ5IPA, HS0/OZ5IPA and more) will be active from Hebron area from March 10-15th. The callsign has not yet been confirmed by authorities, but Ben will try to get E44IPA. Activity will be mainly CW on the WARC bands and the lower bands. QSL via home callsign, direct only. QSLs are good for most police awards (Sherlock Holmes, Hercule Poirot and Lt. Colombo). Any support/donations are most welcome. His E-mail address is: beniparc@post3.tele.dk
His Web page is: http://home3.inet.tele.dk/beniparc/

FR5/T, TROMELIN ISLAND. Henri, FR5ZQ, now signing FR5ZQ/T, has been active over the weekend on 20 and 10 meters SSB. He will be there until March 3rd. Activity seems to take place around 1800z and 0300z.

FT5Z, AMSTERDAM ISLAND (This one is interesting!). The "Picture DX Bulletin" reports that Mikael, FT5ZJ, is more frequently active now on SSTV. He is mostly seen on 20 meters between 1600 and 2000z. QSL F2YT. See the "Picture DX Bulletin's" pictures of the month at: http://www.ping.be/on4vt/

FW, WALLIS ISLAND (Update). Cedric, HB9HFN, now signing FW5FN, reported eariler in the week that he lost his amplifier after only 300 QSOs. He also states that propagation is not very good but hopes it will improve. Europe, look for him on 10108 or 10135 kHz as it seems that there no EU QRM on these frequencies. Cedric states there will be NO 160 meters due to his linear and no trees for support around the hotel. He will, however, spend more time on 80 meters.

HK, COLOMBIA. Gerard, F2JD, who is active as HK3/G0SHN and can ususally be found on HF, is now active on 6 meters also. Sorry, no QSNs yet.

IOTA NEWS......
EU-088. Tom, OZ5TOM, will be active from Lasoe Island from April 18-25th, as OZ5TOM. He will only be active on 20/40/80 meters SSB, from aprox. 1900-0300z every day while he is on holiday. He does mention that if 10 meters is open, he will also try there. Tom will use only 100w and a wire antenna. QSL only direct via Tom Wallin, P.O.Box 202, DK-2640 Hedehus, Denmark.

NA-168. Chris, W5CTV, will operate from Grand Isle in the Gulf of Mexico, March 6-7th, possibly the evening of the 5th. Chris will only have 10 meters and will operate on the IOTA frequency (28460 kHz). QSL DIRECT to: Chris Vincent, 2620 Long Branch Dr., Marrero, LA, 70072, USA or via Bureau.

OC-066. Guy, FO5QA, is a newly authorized licensed resident on the Tikehau Atoll in the Tuamotu Archipelago.

SA-084. Pedro, HK3JJH, will try to active Cacagual Island for two days March 6-7th (another source reports March 3-4th). He hopes to arrive on Malpelo Island after his Cacagual operation and be active on 10, 15, and 20 meters SSB. QSL direct: P.O. Box 81119, Bogota, Columbia.

JW, SVALBARD. By the time you read this, Juergen, DJ3KR, should be active as JW/DJ3KR until March 5th. He will be operating mainly on the low bands and the WARC bands. QSL via DH3MG.

KG4, GUANTANAMO BAY. Look for Vic/N4TO and Arlan/N4OO to be active as KG4TO and KG4BV, respectively, from March 12-22nd. Operations will be primarily CW, and they will concentrate on the LF and WARC bands. QSLs via the home callsign of the operators, KG4BV via N4OO and KG4TO via N4TO.

PJ8, ST. MAARTEN. George, W3EH (ex K2KTT), will be activating PJ8/W3EH (formerly PJ7/K2KTT) from March 2-9th. He will be an entry in the 10 meter ARRL Phone DX Contest. As time permits, George hopes to be active on 80-10 meters both CW/SSB. QSL via W3EH, or for older listings including all paperback callbooks back to 1982, QSL via K2KTT.

QSL INFO AND NEWS........
Jean Michel, F6AJA, reports that the cards for 5R8OP and 5R8PR are still at the printers', PLEASE be patient.

Hamad, 9K2HN, reports that he has added his log book to his Web page at: http://www.gate.net/~morpheus/hamad/9k2hn.html
He states that there are 79959 QSOs listed. He has also currently added the following logs that he manages: 9K2F, 9K5HN, 9K2HN/P and 9K0A.
If you have any comments, please contact him at: 9k2hn@kubbar.com

LZ5W was active in CQWW WPX RTTY as a Single Op on 7 MHz. The operator was Slavi, LZ1MC. QSL via LZ1MC.

JA1UT's address is: Yoshio Hayashi, 4-20-2-401 Nishigotanda, Shinagawa, Tokyo, 141-0031 Japan

VK9XX/VK9YY. Charlie, W0YG, informed OPDX that they made over 12K QSOs from both islands (more QSOs were made from Cocos-Keeling than Christmas Island). He did mention that the cards must be re-ordered before QSLing can begin. The initial batch of cards received cannot be sent out (ed. reason not given). Charlie wants to remind everyone to PLEASE not send the VK9XX and VK9YY cards in the same envelope. Separate operations require separate envelopes. They will QSL one operation per envelope, but if you sent two separate cards in one envelope, you will have to re-QSL. Charlie states, "Any other way is just too inefficient and adds too much time to a volunteer job anyhow." By the way, they are already talking about the next trip!

Bin JA3EMU, QSL Manager for TZ6JA, states that he will accept QSL cards via the JARL bureau until the end of May in the year 2000. The reason is that he is withdrawing from the JARL. From June in 2000 onward, do not send QSL cards to the bureau, only direct to his QTH with SASE.

Ciro, PY7ZY, informs OPDX that he is receiving QSLs for his PY7ZY/7 DXpedition to Itamaraca Island (SA-046), but with two problems:
1) Many IRC were received without the stamp of the origin country. This is impossible to make exchange for postage returns.
2) Many DXers are sending cards without IRC/SASE. In these cases, QSL cards will be sent via bureau.
All QSL cards that were received will start going out beginning March 1st.

ZF2MO, who has been quite active in contests the last few weekends, reports that his QSL route is via OM2SA.

S21, BANGLADESH. It seems Bob, G3REP, continues to be active as S21YP on 20 meters CW. Activity seems to be around 0200 and 0300z. QSL via home callsign.

SV/A, MOUNT ATHOS. Several sources are reporting that Vangelis, SV2BFN, and possibly two other operators are planning to be active at the end of May. This will mainly be a SSB/RTTY operation.

WEBSITES FOR DXERS.....
The K1WY DX Association has moved its web site to a new server. The new address of the Web Site is: http://pws.prserv.net/k1wydxa

Kelly, KE9KD, reports a new Website called DX-Central DotCom is now set up and running at: http://www.dx-central.com
Kelly and a few other guys maintain this Web site which is dedicated to DX. They built the site because they found themselves frustrated in having to jump from site to site to get DX information. This site is 100% interactive and completely database driven. One is able to do callsign lookups, get QSL route and manager info, view a real time feed of the PacketCluster network, check logbooks and have an interactive chat session. The site also features a fully searchable index of ARRL and OPDX bulletins. They hope to add more in the near future. They are hoping this web site will be of value to the DXer and encourage input from the visitors.

YK, SYRIA. It has been reported that Omar, YK1AO, can usually be found on Fridays on the low end of 40 meters looking for USA stations. He has a good signal, but you have to QRS a bit to around 13 wpm. The best time to find him is 0400-0500z (late stateside Thrusday nite). Bob, N2SU, states, "This makes sense because Friday is the Muslim sabbath and is a good time to try for Middle Eastern stations..... FYI, Syria is #26 Most Needed (World) and #24 (USA) according to The DX Magazine."

ZP40, PARAGUAY. Tom, ZP5AZL, will be active in the ARRL DX Phone Contest March 6-7th, possibly using the special callsign ZP40Z. The same callsign will be used again in the CQ WPX SSB Contest in late March. His activity will be on all bands, especially the high bands. QSL via W3HNK. Also, look for Juan, ZP5MAL, to be active in the ARRL DX Phone Contest using the callsign ZP6T. He will only be active 1on 5 meter as a High Power entry. QSL via his home callsign.

ZV0, ST. PETER & ST. PAUL ARCHIPELAGO. Paul, PT2NP, Director-Secretary of the ABRA (DX Brazilian Association) provides the following update. The DXpedition will be using the call signs: ZV0SB (SSB) and ZV0SW (CW). Also, for the first time during their DXpeditions, they will try to work on 160 meters. The following is their suggested frequencies:
CW - 1825, 3505, 7005, 10140, 14005, 18075, 21005, 24895 and 28005
SSB - 1835, 3785, 7055, 14195, 18145, 21295, 24935 and 28495 kHz
Their main pilot and land coordinator will again be Ari, PT2BW. There will be at least another pilot. They are making the best effort to work in RTTY too, but it is not sure for the present. If this mode happens, the call sign will be ZV0SY and frequencies will be around 14080 and 21080 kHz. For more details, please refer to OPDX.395 and the ABRA Web site at: http://www.pt2dx.org.br

Subject: E44DX Wrapup

E44DX Wrapup: The Historic First DXpedition to E4-Land
28 February 1999

The E44DX team of W3UR, OH1RY, OH2TA and OH2BH returned to Tel Aviv, Israel on Tuesday, 23 February, after completing 33,775 QSOs with 14,640 individual DXers in 7 days of operation from Gaza City, Palestine. A special luncheon was hosted by a large group of Israeli DXers, showing their true ham spirit and hospitality. These DXers also provided the E44DX team with a memorable visit to the historic city of Jerusalem.

The last night of operating saw E44DX on 160 meters with good coverage to Europe and the U.S. Although the all-band total of 7430 U.S. QSOs is quite reasonable, the path to W6/W7 proved to be a real challenge. In spite of the difficult propagation, 1145 QSOs were made with the U.S. West Coast. The final JA total was 3720 QSOs.

One of the Yaesu FT-1000MP radios was donated to PAWS, the new Palestinian Amateur Wireless Society, which now holds the E44DX call sign. Another complete station was donated to PAWS, and is currently being used by E4/OZ6ACD from the West Bank region of Palestine.

The two locals, Dr. Sami, E44B and Dr. Ali, E44A are expected to be active regularly. Their assistance to the E44DX DXpedition was invaluable.

The E44DX team would like to thank the Palestinian Authority for their invitation to conduct this first E4 DXpedition as well for granting visitor licenses number one through four. Also, the assistance and support of Yaesu Musen Co. Ltd. (http://www.yaesu.com or http://www.yaesu.co.jp) was highly appreciated.

Please QSL E44DX via OH2BN. A multi-color, folded QSL card is being designed. Meanwhile, an on-line log search is now available at the official E44DX web site:

http://www.n4gn.com/e44dx/

Due to the number of requests from DXers with e-mail-only accounts, the same log search database may now also be searched via e-mail! Simply send a message to e44dx-log@n4gn.com with your call sign at the beginning of the SUBJECT line. The BODY of the message is ignored.

Coming soon--the E44DX Internet Slide Show! Watch the web site for further details.

Source record: 149281

Will be running SSTV during the Hamvention from the room in the evenings on 2m. Anyone else planning this, we have no local SSTV activity on 2 but have heard many others talk about groups in thier cities. Frequency? Running Chromapix, Quick Cam and an HT to a 7/8 wave whip.

Tim ka8ddz

Self proclaimed vigilantism is not a course of action for you (or anyone else) to take. When you become "Knighted" by Mr.. Hollingsworth and the FCC, then you can police the bands. Until that time, do yourself, and everyone else a favor and just file complaints to the FCC for any alleged illegal activities.

PS. Under US Postal Law your warnings can be taken as a personal threat (assault) which because it is delivered by US Mail is a Felony. Think twice before you do this.....

Shouldn't be. The rollover on GPS dates is this August when the
1024th week since the constellation was launched occurs. The
date counters roll over to zero at that point and most older GPS
receivers will have to download a new ephemeris from the satellites
before they can track. That takes about 15 minutes.

What do y'all make of this situation?

I'm a "Power Walker", which means I take long, brisk walks as part of
my
daily workout routine. I average 8 miles/day, 6 days/week. I live in
a
fairly new Orange County subdivision with a neighborhood elementary
school. Since we moved here last July, my daily walks have taken me
through the parking lot of the school. Not into the school building,
not
onto the playground; simply across the length of the parking lot. For
the
past 11 months, nobody has had a problem with this. Today, I was
stopped
by a security guard and questioned as to what I was doing there. After
I
explained that I lived in the neighborhood and was on my daily walk, I
was
told that all "visitors" on the school grounds must sign in and be

assigned a "badge." When asked why nobody had mentioned anything to me
over the past 11 months that I have been walking through there on almost a
daily basis, I was told that it was because "a parent called and
complained. She was concerned about the childrens' safety."

So, let me get this straight...even though I am a law-abiding citizen who
PAYS for that school with my property tax dollars...even though I had done
nothing suspicious, committed no crime, and did nothing to endanger the
safety of anyone at that school...even though I have no children of my
own, but yet am forced to pay ridiculously high school taxes to support
the education of other people's children...I cannot walk through the
PARKING LOT of my neighborhood school without being given official
permission to do so, simply because a parent (whose children I am
supporting with my property tax dollars) feels that my walking through the
school parking lot may be a threat to the "childrens' safety?!"

If there are any legal professionals in the audience, I would like an
opinion as to whether or not they have a legal right to prohibit me from
walking on the premises. If not, what is my legal recourse in the event
that they attempt to force me from the premises?

Thank you, Gary. I was gonna say sumpin bout dat, but I forgot exactly when
the 1KW (One kilo-week) was up. Also, I believe some of the more primitive
sets are "locked in" without the capability to download the ephemeris.
Marine Log had a notice to that effect about 6 months ago.

4960. Re: QST no longer carried locally, due to lack of interest

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-28 00:00:00 UTC
From: "Robinson, AB5VH" <rc@crusoe.org>
Message-ID: <7bakkd$2et$2@news-2.news.gte.net>
Source record: 149306

I notice it can be hard to find, too. I am a life member, but I'm away from home so much that it is nice to pick up the odd issue here or there sometimes.

One thing that hurts the newstand sales, I would imagine, is the large (I admit I am guessing/speculating) proportion of regular readers who subscribe, i.e. are ARRL members. QST is not really something that a non-ham would pick up for light reading or current affairs. All the hams are mostly either members or they borrow from a member. Not much call, then, for newsstand copies. I see CQ slightly more often on the racks than QST, even though CQ probably has a smaller readership. Again, I will go out on a limb and guess that most ARRL members, like me, won't subscribe to CQ, but don't mind buying an issue once in a while if there is something interesting in it.

I heard the "racial slurs" as you call it made by 0tk. IT WAS A REFERANCE TO WHAT HE CALLED WHITE NIGGERS. The use of the term had nothing to do with color. OTK was slaming "bubbas" "crackers" ie stump jumpers in other words.

But what the hell. When did truth get in the way of a stump jumper.Perhaps I should see if the spaced out bell show would play the tapes of oka calling phill nigger 9 goofy old riging, brillo head, and other such crap. Or the tapes of jamming while talking to frankie on a speaker phone open mike.

The 10.5 G nal was explained and dealt with. Another truth does not get in the way situation. How stupid can you get.

Did you see a copy of The Bulletin, the research journal of the American Mathematical Society? Probably not, for, like QST, it is too specialized a periodical for a common bookstore to carry permanently. (At $35 per copy, it's also too expensive for a common DJ to afford.)

>I notice that QST was no longer among the available
>titles. Curious, I asked the store manager why they were no longer carrying
>this particular magazine. "Nobody buys it. There used to be a few old guys
>who would come in and buy it...but now, we don't sell any at all."

Just for fun, let me call your bluff: Provide the phone number of the bookstore so I too can hear the same remark the seller made to you.

Message-ID: <7baqr7$8tu$1@gaia.ns.utk.edu>
Source record: 149311

Well... this is another reason why I am very happy I got rid of my
VX-5R also. I mean the idea is great. But I'll stick with my trusty Icom
IC-T8A, and the ever faithful HTX-202 I ahve ahd and so dearly love. I mean
when I spoke to the Yaesu tech. on the phone about the MANY BLOCKED Freqs.
(I mean from 900MHz UP! Not the NORMAL cell freqs.) he told me plainly that
the reason was because of cell images. Hmmm, now in MY opinion it would be
better business for Yaesu to do MORE R&D on the VX-5 and SOLVE this....
But ahhhhh, well, I guess it is dificult to do in a package SMALLER than
a pack of cards, that has RX from .5MHz (500kHz) - 999.999MHz. Instead
we will block all we have to to get it FCC type accepted. Well, THAT to me
is poor business.... and VERY UN-LIKE the Yaesu of old..... so, I'll keep
away from the new HT's for a while now.... maybe for good.

just my 2 cents worth... :>

Message-ID: <OBgCmc7Y#GA.222@nih2naad.prod2.compuserve.com>
Source record: 149319

The most common problem with battery packs is that one cell has gotten weak. As soon as any cell in the pack is depleted, the whole pack is unusable. Batteries will frequently "come back" on their own, but I'm a bit puzzled by lasting another hour. You may want to verify the voltage readings with a DVM somehow.

Cells get out of sync due to the small variation in construction and self-discharge rate.

The only way to equalize the batteries is to trickle charge them at a slow rate to keep the cells that are charged from overheating.

Most trickle chargers create problems because they are "dumb" and keep charging forever. Manufacturers claim it doesn't harm the cells but others are not so believing. At a low enough rate it's not so bad, but it does cause the cell to get warm and may cause it to vent. Cell manufacturer's ratings may not be correct when you lump several cells together in a plastic case.

Fast chargers can burn a cell by fast charging when that one cell has already reached full charge (but the rest haven't so it doesn't sense that condition.)

Using a battery after a cell has dropped out causes that cell to be reversed charged. Very damaging to that cell.

I believe 2 years is about right for rechargeable batteries unless unusually good care have been given.

<<What's the difference? Why would I buy a 'base station' radio if it costs much more than the mobile 'version'?
As-in... Two radios from the same company with the same features (to my 'tech' eyes) usually have a much different price-tag. It'd seem that the mobile, being much smaller, would cost more to build, but... usually costs less than the comparable base-radio...
>>

Well, the base station radio usually is larger, because of a power supply integrated into the radio. Also they have more features.

Joe Cassata, my father-in-law, owns a small wire business which sells
magnet wire and coax. I know he supplies magnet
wire to retailers who resell the wire to Tesla coil builders.

He sells small quanities direct, too.

Well if the FCC needed to get both of these guys OTK and OKA off the air
all they would have to do is listen to them. OTK used racist remarks
over the air all the time. He also is guilty of Jamming people who are
in moblies on 20 mtrs and OKA is guilty of the same on 75. OTK is also
not a curtous operator. If a station isn't strong enough he ignors them.
Last night on 75 mtrs there were two light stations trying to get in and
he wouldn't allow them. Now lets suppose that these people had some kind
of emergancy. This emergancy didn't let them have a big antenna or alot
of power. Mr OTK is not a radio operator but a over grown CBer. Heck I
know CBers that have better operating techniques then OTK. This guy
seems to foget what ham radio is trully about. Its not a hobbie but a
service 97.1 states that. I ran with OTK for 2 years and in that 2 years
I found out what kind of person this guy is. I don't think that he
should be held accountable for his actions over the air. In the two
years I have known him he would start trouble if things where to be
calming down he would go to 38.945 and stear it up again. I WILL TESTIFY
IN COURT IF NEED BE to that fact. I can't belive that the press is
covering OTK when I belive that they should be asking questions like DID
YOU EVER CAUSE QRM Mr OTK? Questions of this sort. PORKBUT will aways be
a trouble maker and as things calm down his true colors will come out.
Thats just my opinion I could be wrong.

Let's not forget that up until just a few years ago, QST wasn't available
at the newsstand. You were suppose to get it as part of your membership,
and there was limited distribution to ham radio dealers and perhaps some
electronic stores. The move to making it more commonly available came in
this decade, and was undoubtedly an attempt to reach a broader audience.
It seemed to coincide with the "New Ham Companion" section. There have
always been articles for beginners, but such heavy segregation seemed to
be a new thing.

>much more than the mobile 'version'?
>As-in... Two radios from the same company with the same features (to my
>'tech' eyes) usually have a much different price-tag.

Can you give an example of this?

The use of the expression "base" (and also "unit") did not find its way into general ham parlance until the advent of the no-code Tech, and the large influx of former CB enthusiasts. "Units" used to be "rigs," "radios," or "equipment." There were no real "bases," either, although there were "mobiles."

Anyway, to get back on the topic, a "base" rig implies to me that it is equipped with a built-in 115v ac power supply; a mobile would be set up to run from 12vdc. This easy dicotomy has been blurred by manufacturers trying to keep prices down by leaving out the 115vac supply on the assumption that everyone already has a 12vdc supply.

What's difficult about doing such? I know several guys who carry 2m HT's on BICYCLES... One has a 4' (or so) antenna with 3 little 6" 'radials' on the luggage rack on the back, and the 'bud' style ear-speaker/mic.. No one has ever complained about his signal and he rides just about everywhere with it. I'd do such, but I'd probably get myself killed.. It's hard enough dividing my attention between the road and the radio in the car... :)

Dunno... I go into the store and there's these 'giant' 'base' radios that would not fit in my little car, that have 40-50 different buttons on the front. The mobile radios are smaller than most car-stereos, and have those 40 controls 'stuck into' about 6-7 buttons which you access by pressing one while turning the power on, while pushing a function-key, alt-key, turning the volume control after pressing a menu-button, etc. etc..
Anyway.. You did, round-about, answer my question..
Thanks.. ;)

George,

Your Hitler Youth talk doesn't frighten me. You began an e-mail exchange with me after reading one of my posts. It obviously set you foaming at the mouth. I discouraged you from sending me private e-mail.

you wrote:

"Poor Dave,
How in the hell did you get through the question on radio law.
The amateur community should petition the FCC to refuse renewal
on you license until you can pass the test again.
NOTHING TO BACK UP CLAIMS??? What a mental cripple you are."

I snipped the long list of government regulations you added.

You followed that one with:

"How representative of the worthless turds, tyrants, liars
disloyal socialists, and pedophiles that populate the
current administration and government positions of dishonor."

If you are worried about me, write your own congressman and your Senators and ask them remove me from my position. Be sure and let them know the truth about Waco, your views on the President and so forth. That'll certainly carry a lot of weight and allow them to know what an upstanding citizen they're dealing with.

I hope you don't mind that I've kept copies of your e-mail and the information from your newsgroup postings and Web page so that I can supply them in response to any requests for information I receive.

Your Web page is filled with distortions and untruth and your conclusions defy logic. Why not barricade yourself in your own little compound and wait for the black helicopters, nutball?

Generally, the base radios are rated for longer tx times, higher
power, and made more for home use.. Most likely the mobile radio will
advise you to refrain from long conversations.

5006. The REAL story behind 14.313 and 3.950

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-28 00:00:00 UTC
From: Clean-Up-The-Bands <protect-ur-kids@ham.net>
Message-ID: <abhC2.10687$po.4530@c01read02.service.talkway.com>
Source record: 149352

Don't you ever wonder why Herbie-baby gets the "hook" from ham radio over something that isn't even amateur related....yet Pork Butt is still on-the-air and his $10,500 NAL excused???

Wonder why a poor, lonely old drunk gets suspended from HF for six months, yet for SIX YEARS, a SOBER AF2Y has been doing THE SAME malicious interfering that W2YEE does, yet nothing happens to Doc???

Ever wonder why WA9KJI gets his "Quiet Hours" lifted from the FCC "for good behavior", IN SPITE of the fact that Mr. Castle was violating those imposed quiet hours by the FCC, for WEEKS ON END????

As much as you may want to sweep it under the rug, and as much as you want to yell "conspiracy nut", these cases are
ALL politically motivated. Some time back, AF2Y and W2OTK enlisted the help of the Anti-Defamation League of B'nai B'rith. (ADL for short) The ADL has now become the top law enforcement agency for the U.S. government. The ADL became involved in amateur radio during the early days of Herbie-baby. The ADL's purpose was to get Herb off of ham radio because he was an "anti-semite". When Herbie-baby fought back, and wouldn't go peacefully...many amateurs, along with the help and FINANCIAL ASSISTANCE of the ADL, set out to destroy Herb.

AF2Y helped to broaden the involvement of the ADL in ham radio by introducing them to 3.950. There, WA9KJI was given BRAND-NEW amateur radio equipment, purchased by the ADL, to "jam" any conservative or right-wing conversation on the frequency. If you've ever seen WA9KJI's "shack", it is TRULY a "shack". The man lives in absolute poverty, yet has visibly high-priced, state-of-the-art amateur transceivers and amplifiers stacked on top of wooden crates that are sitting upon a dirt floor.

ALL of these amateurs, plus other recruitments by them, have been given immunity from FCC prosecution, thanks to the ADL. That's why you'll NEVER see them get ANY punishment from W. Riley Hollingsworth, and why the amateur bands will remain in chaos.

A few notes on chemistry and history. Before diodes were
Gillette "Blue Blades"; before Blue Blades were crystal
sets. The Blue Blades worked because the point contact
between the iron selenide coating on the blade and the
carbon point formed a rectifier. Selenium rectifiers
were also available as packaged components in power
supplies of this era. Real crystal sets used a cubic
crystal of galena (lead sulfide) and a "cat whisker"
contact to form a diode. Since the crystals were not
perfect the point had to be played across the surface
to find a hot spot. Modern "crystal" sets used the
ubiquitous germanium diode.

You might use a soft graphite pencil lead instead of
the carbon rod. Softer grades of pencil leads contain
less clay and more graphite, have a lower resistance,
and since purer, will tend to have fewer dead spots.
Alkaline batteries do not have a carbon center electrode.

>Thanks
>-John K7TY

Take a look at the Standard C508A. It is a dual bander, very small, and
uses 2 AA batteries. Battery life is quite good too. I've carried one for
several years. 300 mW transmit, and good receiver. I also have a VX-1R,
which has more bells and whistles, but it uses a Li-ion battery which must
be recharged. (There's an optional AA battery pack, but it only uses 1 AA
cell, and is basically only useful for receiving.) You could buy a second
battery for the VX-1R. Battery life is pretty good, so a pair of Li-ion batteries
would carry you between places where you could charge them.

Alinco has a couple of pocket radio lines too, one uses AAs, but it is single
band and kind of shabby, the other (credit card size) uses an internal rechargable
Li-ion cell. I've got one, but it tethers you to a charger for anything but short periods
of use (IE you can't swap battery packs).

Alinco also has a big clunky 2m HT that uses AAs. The radio isn't bad, but there
are lots of problems with the AA pack. Most of the "full power" radios that offer
AA packs have problems with contact resistance. They get flaky long before the
AAs are exhausted because of the voltage drop across the contacts. That's not
so much of a problem with the low power radios because they draw so much
less current, so there's less I^2 * R drop across the several spring contacts.
Full power HTs really need soldered packs.

We have indeed seen some excellent quality communications privacy (encryption devices) gear showing up for sale at regional ham fests for use with amateur radio VHF/UHF equipment.

These items are very popular and reasonably priced. The vendor has several demonstration units set up at ham fests and potential buyers are encouraged to try out the gear before buying.

This is high-quality equipment, not junk!

But I thought amateur radio and the ARRL was a hobby which appealed to lots of folks, not just those in one particular occupation or area of expertise. Isn't that part of its, errrrr, "charm" ? Or does CW have the charm market all sewn up ?

So the parents will take away the kids' ham gear, and we lose some of the "new blood" which has been attracted to the hobby--all because of what is happening on one of hundreds of thousands of frequencies. Is this a good idea?

Before mailing those letters, I recommend that the members of your group visit a nearby theater and view the film "October Sky." It might give you some ideas about how to proceed with your "project". By the way, how long has it been since you saw an audience APLAUD at the end of a movie? Well, that happened at the showing of "October Sky" that I attended.

Best regards,
K5PF

It is fairly simple to do, but will cost you some bucks. Why not change the rate plan on your Cellular service? Or, check out the services of companies like Nextel. You can use the walkie-talkie feature to communicate with family members. If you need to go outside your group, you still have cellular service.

> If you use a repeater to, say, order a
>pizza, that is considered "commercial use" and the FCC can come down on
>you like a load of bricks.

You should get an update course on Amateur rules. The Order-A-Pizza arguement was solved long ago and is an allowable communication. I recommend the FCC Rule Book, an ARRL publication. It gives lots of good info pertaining to auto-patch operation.

> One alternative might be to use the FRS band, since
>that is less regulated and offers some kind of rudimentary security.

Connection of FRS units to the telephone system is specifically prohibited by the Rules. You also will be disappointed in the range, which gets spotty beyond 3/4 mile under average conditions. There is no security on FRS.

> Better still, are there any amateur transceivers that can
>transmit a full-duplex, encrypted, digital signal? If the answer is no,
>then why is the amateur market so technologically far behind cellular?

As a hobby-type radio service, we abide by the FCC Rules. Encryption is not permitted.

One final point: There is reason to believe that you are not a licensed Amateur Radio operator. If that is the case, all of this is a moot point. Do not even THINK of firing up the equipment you've suggested without a license--for any purpose. Amateurs jealously guard their frequencies against intruders. Contrary to what you may have heard, we have strong support from the FCC in this matter. In fact, just a few days ago, the FCC (responding to info provided by the Amateur Auxiliary) shut down a repeater system in California because of non-licensed users.

More evidence that ham radio is dying:

I went in to the local bookstore today and searched their extensive selection of magazines in the racks. I notice that QST was no longer among the available titles. Curious, I asked the store manager why they were no longer carrying this particular magazine. "Nobody buys it. There used to be a few old guys who would come in and buy it...but now, we don't sell any at all."

Plenty of computer and Internet magazines in the rack, though. Plus PopComm and Monitoring Times. Ham radio is dying.

This should prove to be the final nail in the ham radio coffin. And rightfully so. In these days of government nannying all aspects of our lives, we have to "protect the children" from anything deemed unsafe or dangerous. Why should ham radio be any different? I propose mandatory warning labels be attatched to all ham radio equipment sold in the United States.

See? Just wait until I turn loose what I discovered today. I discovered something myself (not off the net) that will just blow you away. I want to tell you now but I can't. I must collect a little more data before I turn it on the world. I found some damning evidence that will make national news the same day I open my mouth. Just to make sure the word gets out, I told a few key people. Someone has to give up a secret (long suspested) or kill me, one or the other. Maybe demonize me. Typical...

"MF",

>>>>Enforcement actions are geared at California repeaters and Northeast HF "trouble-makers". This makes manifest the Californian's century old distrust of the Easterner.<<<<

This might bear some truth except for the fact that enforcement actions have recently been enacted against Hams in all regions of the country.

And for anyone that has had to tolerate some of the "Gordo" trained "Hams" in southern California, no one would question the enforcement actions there.

I was stationed in SoCal from 79-83 and again in 86 until retired in 92. Some of the "shennanigans" going on the repeaters out there go beyond "mischieviousness" or occassional pranks. Some repeaters are nearly 24 houR smut-spewers and are an embarrasment to the Amateur Service.

And unfortunately, it's these examples that usually get the press...not the 99% of other repeaters and Amateur operations that benefit the communities and are compliant with regulations. It's just like the 99% of airline flights. You never know or think about them until one plows into the ground at 500MPH.

It has nothing to do with East-West/North-South. It only has to do with regulation enforcement and common decency. And it's about time.

What's the difference? Why would I buy a 'base station' radio if it costs much more than the mobile 'version'?
As-in... Two radios from the same company with the same features (to my 'tech' eyes) usually have a much different price-tag. It'd seem that the mobile, being much smaller, would cost more to build, but... usually costs less than the comparable base-radio...

Thanks.

The key phrase here is "a couple of hams." Several more are still jamming the frequencies on a regular basis. Listened to the chaos all weekend. The FCC's recent "enforcement blitz" seems mainly symbolic at this point. Perhaps just a publicity action to (hopefully) ward off upcoming Congressional attempts to scale back or eliminate the Commission?

DAMN, I am amazed that anyone at ARRL can READ!! What
you have done, and they will kick you ass for this,
is acknowledged that someone at ARRL knows about this
and continues to let it slide. Are you THE Hans
Gooseschtepper, Hitler's Butt Buddy?

Want the tyrannical misrepresentation of ARRL over the
amateur service to end? Force them to account for not
publishing the information at the website below, which
Hans knows about by the way. Right Herr Goosey-mann?

> >> country of laws - it is a country of gangs with criminals running it.

Gingrich is only the tip of the iceberg. The real reason for
this bill is that the folks in government carelessly discuss
criminal operations on the cell-phone during the commute from
Northern Virginia and other suburbs into DC. Somehow they
think security is someone else responsibility. They don't
realize that critical phones have already been cloned, and
no laws or encryption will not save them. New laws aren't
needed, education for the turkeys who discuss sensitive
matters on the phone is what's needed.

Whereas everyone can't park on the side of the road in DC
next to a cell-site that handles these calls, it would be
an education, and it would make a big difference in the way
naive liberals vote in the next election, if only they could
listen in and discover how government really works.

My friend I hardly need a Masters in Criminology to discuss this topic with
you.
Regardless of what may have happened at Waco, your paragraph above makes no
sense what so ever. Please don't refer me to your website, I'm discussing the
issue with you, not a web page, and yours does not answer the questions below.

How does Newts resignation stop Ken Starr and Henry Hyde from moving on
anything?
After working for years through Whitewater, Travelgate, Monica Lewinski and
several others why on earth wouldn't Starr and Hyde use the FCC information
during the impeachment trial? They threw everything they had at him and the
FCC information was never once mentioned during this process, why?

Yes they are, but what does this have to do with the ARRL? What part of the Waco incident was the ARRL involved with?
My local newspaper didn't mention the FCC jamming activity either, are they somehow co-conspirators in treason because they didn't write about that particular event?

> Janet Reno says your date

Sure have. The result was complete replacement of 100k units because
of an undiscovered software bug that only happened when interrupt
number three occurred during the 11th cycle of a divide instruction.
There is no possible way to simulate every possible combination of
asynchronous events.

So, instead of, say, 25 stations in a market, all being actively unlistened to, somehow having 125 stations being unlistened to will be better? These stations will be ego trips for wanna be broadcasters! Its bad enough that the shortwave bands are clogged with preachers all proclaiming their sole knowledge of the path to salvation, we don't need to give every Bible-thumping corner preacher his own "mircobroadcast" station.

5078. VX-5R expanded TX???

Newsgroup: rec.radio.amateur.misc
Date: 1999-03-01 00:00:00 UTC
From: egrebot@internet.com.mx
Message-ID: <7bd373$j5a$1@nnrp1.dejanews.com>
Source record: 149226

Hello.
I finally got my VX-5R in Mexico...
I have one question:
Is there a way to expand the TX down to 138 MHz (or lower)???
With the mod that appears everywhere I can only go down to 140 MHz...
Any ideas?
BTW, something new about Cell RX?

Thank you all,
Emilio XE1YGN.

5083. ICOM 2100H minor problem

Newsgroup: rec.radio.amateur.misc
Date: 1999-03-01 00:00:00 UTC
From: Joe Mehaffey <joe@mehaffey.com>
Message-ID: <36DA1B7A.F3B8816A@mehaffey.com>
Source record: 149231
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment

Last year, I got rid of all the family's older 2M radios and installed three IC-2100H units in the vehicles and one additional unit in the house. The House unit runs on 13.6volt DC battery power float charged continuously. These units have been VERY satisfactory once I solved the following problem.

The problem that I have seen on ALL FOUR radios is as follows:
1) If the TONE SQUELCH is set to anything but the default of 100 hz,
AND
2) You set the frequency to <say> 186.2 hz tone squelch
AND
3) You LEAVE THE OPTIONS MENU SITTING ON EITHER THE 186HZ RX OR 186HZ TX set frequency (as opposed to say the .600mhz offset or the dimmer setting or the color setting) when you push the MEMORY WRITE button,
THEN
3) Within a day or two you will notice that your radio does not work and when you LOOK AT THE TONE SQUELCH FREQUENCIES, you find they are BOTH (tx and rx) at the default 100hz setting instead of 186.2 where they should be.

This has routinely happened on all four radios, EVEN the one connected to the unterruptable battery power source.

Icom says they never heard of this problem.

The workaround is to be sure to have your OPTIONS MENU sitting on <say> the color selection option when you push the MEMORY WRITE key. When I do this, I have never had the tone squelch settings change.

Does anybody have a fix for this problem? I am SURE if all four of my IC-2100H radios have this problem, I am not the only one having the problem despite Icom's story.

Thanks
Joe Mehaffey

Anyone have information on which pins are used for frequency
programming with a uPD861C PLL chip? I would like to raise
its output frequency say, one megahertz. (Converting a CB
for 10m CW.) I believe this is an easier route than replacing
the PLL's reference crystal.

5088. List of the rec.radio newsgroups

Newsgroup: rec.radio.amateur.misc
Date: 1999-03-01 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <7bdc1g$kuv@news.Hawaii.Edu>
Source record: 149236
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

```
Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate
audience, below is a list of the rec.radio newsgroups. In most cases,
a group's name will explain its purpose. Cross-posting should rarely
be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-
built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local
restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed
with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-
running thread results from a single cross-posted article, and the
contents of such a thread drift further and further away from being
"on-topic" in the various NGs that receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups"
posted on the 15th of each month.

Jeffrey Herman, WH6U
(rec.radio.amateur working-group)

What is a "Base Station"? Some people insist if it doesn't have a built in power supply then it's a mobile. So to them I say 10-4 Good Buddy. If you don't have to impress anyone with the size of your "RIG", get the cheaper (smaller) one. The bigger radios have more room for knobs and buttons so you can access controll functions manually without having to go into a menu system to make the radio do what you want. The newer and bigger the radio, the more menu options it is likely to have. IMHO.

Oris,
Have you tried Surplus Sales of Nebraska, do a look-up and they have an excellent on-line catalog, with pictures of the switches. Also if the switch is the same, or similar to the Heathkit SB series, they have an exact replacement for it. Check the page under ceramic switches. It was 45 bux, but steep. But it's a sellers market.

97.1 Basis and purpose.
(d) Expansion of the existing reservoir within the amateur radio SERVICE of trained operators, technicians, and electronics experts.

> him with such rage?

Hey Jeff,
Who is this Zimmerman guy, one of you anti-American Zionist
Socialist friends? I don't fund Amerika's Wafen SS because I
don't pay taxes that I don't owe. The IRS doesn't mess with
me, I know the law. They go after cowards like you. The
evidence of your cowardice is your continued use of a
Followup To address to nowhere. You can't handle the
truth or any opposition.

Want the tyrannical misrepresentation of ARRL over the
amateur service to end? Force them to account for not publishing
the information at the website below.

Want the FCC removed from authority over the amateur service?
Contact your Senators and Congressman. Ask them to force
Henry Hyde of the Judiciary Committee to convene a hearing to
determine why FCC Chairman Kennard is not enforcing the
Communications Act against the FCC and FBI for jamming
licensed broadcasters and the Amateur Radio Service.

3 ea. RC100 Repeater Controllers $140.00 each With rack mount chassis and doc's. Work great!! Was just removed from service because of upgrade to Link RLC-3 system.

1 ea. RC85 Repeater Controller (PCB only)$200.00 Was purchased from ACC in 1989. Also lost's of doc's and old ACC news letters from the 80's

1 ea. ACC FP-900 with CTCSS Interface $100.00 Is to be used with the RC85 controller and Icom band units.

1 ea. ICOM IC-900 UHF Band Unit $175.00

> > to account for the FCC part in the criminal jamming.
>
> And here I thought Gingrich resigned because of Republican
> losses in the last election. Goes to show how little I know.

You're absolutely right, you are pretty much clueless, and
your response did not show much pondering of the issue.

Gingrich could never be defeated in Georgia's 6th District
so long as he was alive and running for re-election. The
losses in the House had nothing to do with Gingrich or the
manner in which the campaign was run. The cause for losses
is based on 52 percent of the population being controlled
by a gene-based Myers-Briggs ES personality. These Extroverts
do not have an individual self and therefore will not act in
their own best interest because they not not recognize self-
interest. This same 52 percentile is good at Sensory type
activity like sports, but powerless in the realm of spirituality,
intuitive perception, or critical, analytical thinking. They
get their way on election day because of their numbers, but to
their own ultimate destruction.

Gingrich did not have to resign, his resignation came hours
after his staff presented him with my letter asking for an
investigation of FCC Chairman Kennard. His replacement is
a Gingrich clone, proving the numbers were still in his
favor, no matter what.

Tired of the FCC ruling over the Amateur Service, even
without moral authority to do so? Have your Congressman
contact Henry Hyde at the Judiciary Committee. Demand they
convene a hearing to find why FCC Chairman Kennard does
not enforce the Communications Act against jammers working
at FCC, FBI and the US Air Force. Details at the website
below.

Tired of ARRL misrepresentation of the amateur community?
Force them to account for not publishing the information
at the website below concerning jamming of the Amateur
Radio Service by FCC and FBI. Since ARRL does not truly
represent amateur radio, why would any operator be a member?

Expose the treason, dump the ARRL.

>Hardly anyone listens to broadcast radio anymore, a sure indication that
>micro broadcasting is needed to restore life to the medium. The FM stations
>play the same music over and over, wind up losing money, and get sold to yet
>another owner.

Lets see, _Advertising Age_ says FM radio ad revenues are at an all time high. _Broadcasting_ magazine's listing of sales prices of FM stations shows that stations are also selling at all time high prices. (Example, a station in this market which was purchased for $5 million ten years ago recently sold for $55 million. Another example, a small station in this market which sold for $120,000 14 years ago is currently estimated to be worth between $5 and $7 million if the current owner were to put it on the market.) That doesn't sound much like a dying medium to me.

>AM broadcast stations try to make money by running mostly syndicated shows
>grabbed from a satellite feed, running as many cheap commercials as possible,
>and keeping their staff down to an all time low.

AM is hurting. The only format that draws an audience worth counting is talk radio, and except for a very few strong personalities, that's going nowhere. Audience numbers are down, ad revenues are down, and sales prices of stations are down. AM can't compete with FM, and that trend has been firmly established for a long time now. Some smaller AM stations have even gone dark (IE closed down, surrendered their licenses), a historic first for broadcast. There's hope on the horizon, with an imminent digital transmission format for AM stations which will put them back on a par with FM, but it will be a long road since listeners will need new receivers. I estimate it will take over a decade to reverse AM's fortunes and put it back near par with FM broadcast, and that's probably optimistic.

>But it doesn't work any more. Hardly anyone is making money in broadcast
>radio because hardly anyone is listening to it any more. Broadcast radio has
>driven its former listeners to using a CD or tape player while in the car
>(practically the last place where regular listeners are to be found), and it
>has become a niche market.

You obviously haven't looked at a rating book, or at the annual reports of the major broadcast players. (Hint, industry average return on investment is running at 22%. Practically no other industry in the US has that large a return on investment (newspaper ROI is running under 5% for example). Broadcast, at least FM broadcast, is a major cash cow for the media companies.) In the key drive time periods, radio is doing better than ever, at least FM radio is. What holds that audience is the frequent news/traffic/weather reports interspersed in the popular music formats. A bit of DJ comedy also gives the commuter something to crib for the bull sessions around the water cooler. CDs and tapes can't compete.

>Yes, broadcast radio is dying if not dead. Time to look for fresh ideas, and
>micro broadcasting is one such idea whose time has finally come.

Microbroadcasting offers nothing to the primary radio listening audience
since its range is too short. Your potential listeners want a station that
they can receive for their entire commute. A station that fades out after
only a couple of minutes is of no interest.

>The FCC knows all too well that broadcast radio is dead and is simply trying
>to revive it.

Actually, the FCC has fallen prey to the same lunacy that brought us LPTV.
That went nowhere too. Thousands of licenses were issued, at a fat net to
the US Treasury, but few of the stations ever made it on the air, and fewer
still are still on the air. It was a dumb idea then, and it's a dumb idea now.
Broadcasting is a mass medium, and that requires stations to have the
range to serve a mass market. The economics don't work any other way.

5100. Revoke my License Please

Newsgroup: rec.radio.amateur.misc
Date: 1999-03-01 00:00:00 UTC
From: md <arufon@erols.com>
Message-ID: <36DAD87A.7A40C2A9@erols.com>
Source record: 149248

Dear Mr. Hollingsworth,

-These are not joking matters. BUT, I am and will merely use the very same logic previously presented (on the air) from other amateur radio operators... I use that term loosely.

-I will, of course, Cc: without using the quote "FAGOT-BASTARD" from K5BLB's fine tolerant amateur radio practice, to my Senators, Congress Person and
the ARRL.

Mr. Hollingsworth, I understand you and the FCC are very busy working very hard to clean up amateur radio and save the hobby, I will support you in this. I also understand that action has been taken against a few violators and I support that as well.

For all of your work yet done, I wish you luck and all the speed necessary to achieve your goals. However, even with all your hard work and best intentions, I don't think you have anything in your bag that will help me...

Whether or not this is called a premature act or an immature act on my part does not matter. What matters is that I've had enough! (Yourself and others with the FCC have already been informed about these matters in earlier communications from me) And that is, For better than six years now I (for one) have been labeled and repeatedly harassed with indefensible charges from -many- fine upstanding, slanderous, jamming, ignorant, truly bigoted, and well meaning amateurs from around this great country. Some of those fine amateurs now occupy the oasis I thought I had found for my amateur radio enjoyment. In light of the very serious claims and charges leveled against me, I must confess that I am un-fit to hold a valid amateur license any longer. It's time to clean up amateur radio for good!

Amateur radio will be better off without my "political/current event/I love whitey/white pride" rhetoric discussions producing most if not all of the hate and discontent throughout the honorable hobby you seek to save. You must help stop my "I love whitey" rhetoric speech before it leads to accepting and promoting lynching or the indiscriminate dragging deaths of innocent non whites or even worse, yelling FIRE! in crowded theaters everywhere... God forbid. I too, will benefit from swift, sure and severe action, because, what little free speech enjoyment left on the amateur radio frequencies for me is quickly disappearing anyway... Everybody wins!

Mr. Hollingsworth, You will be helping save amateur radio from the recidivous "RACIST/WHITE-SUPREMIST/SEPARATIST/NEO-NAZI/FAGOT-BASTARD" that I am accused of being by many fine fellow amateurs like W2OTK; aka "P.B." (your 'self appointed' helper) and WA9KJI, AF2Y, K5BLB, KK7HO, KF3AB, K5MVK and a host of others too numerous to include in this short letter. But, every single one of the station call signs listed above has used the amateur radio spectrum to publicly state either that the FBI, FCC, etc., were going to -get me off the air- or that they (meaning them) were going to take whatever frequency I'm using away from me. Well, here's the chance they've been waiting for... I'm turning myself in! I can't stand it anymore!

-Publicly Revoke my Amateur Radio License Please-

-Please help them save amateur radio and this great country, from someone like me.

Good luck in the contest,
Mike

P.S. - I've been told that a Dr. Jack Kevorkian can help me with the other problem I have... living with a chronic case of "White Pride"! After all, a modern multicultural society has no place for "White Pride"... now does it?

So why did he resign? Simply because he was presented with this letter? Not very logical, what would have been the result if he had ignored your request for an investigation? Since an investigation of the FCC carrys little or no political importance why would he have resigned over such a matter?

> Tired of ARRL misrepresentation of the amateur community?

Of course the ARRL is a publishing company, you might consider starting a ham radio organization that publishes a monthy magazine, providing educational books on antennas, microwave, DX'ing, etc. Provide a lab that evaluates performance of new amateur gear, then start an outgoing QSL service that is free to your members and provide licensing information on all countries that you may want to operate from while visiting. After you grow your membership to that equal to the ARRL you too can afford to pay lobbyists to visit Washington. While the ARRL may not do everything I want done I must look at thier efforts collectively, when I do I come to the conclusion that no other organization does more for amateur radio than they do, which is why I am a member.

Hey, I'm not that well up on radio stuff, so excuse me if this is the wrong place for asking this.

A client of mine just bought some Motorola GP340s (he rents them out to film studios) and has a problem with them. Apparently, when you turn them on they take around 5 seconds or so running self-checks before they can be used. This is bad because they have to be turned off when shooting (for obvious reasons) but as soon as 'Cut' is called they need to be on, straight away.

His older ones were more basic and didn't have whatever techno stuff the new ones do and therefore didn't need the self check, they just came right on.

Anyone know if this kind of things can be circumvented, or else can suggest a more appropriate place for this question?

TIA, Matthew

This problem is common in newsgroups. Read all the information at
the website, study the relationship between Gingrich and Clinton
and their membership in the Council on Foreign Relations, go to
college for six years, get a Masters in Criminology, then we can
finish this conversation. Gingrich saw the authorization path
led to the White House back in 1994. Causing harm to a fellow
lodge member is an executable offense and Ken Starr and Henry
Hyde were holding the evidence and ready to move on this.

In a previous article, dvmcguire@mindspring.com (David V. McGuire) says:

>L=468/F for the quarter wave dipole. What would the formula be for a
>full wave? Double wave? I'm thinking for 10m. Thank you.
>
L=468/F is for a half wave dipole, each leg being 234/F long (quarter
wave). Any other lengths would be a multiple of this. BTW, full wave
and double wave antennas probably will not present a good match to a
transmitter without some type of matching circuit. The half wave antenna
is a full size antenna.

What the heck, Dan - let's post all of 97.1:

97.1 Basis and purpose.
The rules and regulations in this Part are designed to provide an amateur radio service having a fundamental purpose as expressed in the following principles:
(a) Recognition and enhancement of the value of the amateur service to the public as a voluntary noncommercial communication service, particularly with respect to providing emergency communications.
(b) Continuation and extension of the amateur's proven ability to contribute to the advancement of the radio art.
(c) Encouragement and improvement of the amateur service through rules which provide for advancing skills in both the communications and technical phases of the art.
(d) Expansion of the existing reservoir within the amateur radio service of trained operators, technicians, and electronics experts.
(e) Continuation and extension of the amateur's unique ability to enhance international goodwill.

That was my point. Jogging has been shown to have many many
health benefits. Of course I'm sure all runners have their share
of trips and run-ins, but I certainly wouldnt call that
self-destructive in light of the benefits.
I'm sure some will have serious medical problems...I'm
also sure that the greatest number of these will be pre-existing.
For instance asthmatics. Believe it or not, jogging can actually
reduce the occurence of asthma in certain sufferers. Problem isthat
sometimes when exerting yourself you can have an attack. Its still
beneficial.

Don't even * THINK * of equating the current level of childish bullshit on those
frequencies with the late Capt. Mike Galego, KA4MUJ.

Mike had more honor, wisdom and common sense in his left thumb
than most of the people who populate those frequencies before and
now.

Ham radio LOST a great op. when Capt. Mike passed on. And those who
bothered him and Judy - KA1SKV, should hang their heads in shame,
asssuming they are not so extraordinarily dull in their thinking capacity,
and thus be incapable of experiencing such feelings.

Believe me, when the Commission needs to do something, it has a way of finding the troops to do it. "Think harder, work smarter...."

I should know - my job there was finding and coordinating troops for special targeted operations (I was chief of enforcement in San Francisco for 18 years). Some involved the amateur service, most involved other services.

You are right - smell the roses, and make sure what you are smelling is not yourself being held over the coals.

How about ever moving when you don't have to. Walking around the house, or
god forbid, leaving the house-- what a HUGE risk!
What about actually choosing to go for a drive in the car? Sounds too risky
for my blood, I'm going to stay at home.

<giggle> Yeah, that's it, we all have a secret desire to be movie stars
and figure if we suck up to Hollywood enough they'll cast us. (Except
Ed; he's too ugly.)

>

You can't (easily) find unbuilt SB102s and the like, but what you can do
is look through old ARRL Handbooks for fun projects that can be built
using parts from places like http://www.tubesandmore.com. The old
Handbooks are a dime a dozen on EBay and elsewhere, and surprisingly a
lot of the older parts are still available without much scrounging at
all.

Dear Friends

Can anyone please give me the circuit diagram of the FT707 transeiver from
Yeasu. We have to get it repaired and we do not have any local dealer of
Yeasu here. Please send me an electronic/hard copy of the circuit diagram.
I will be ready to pay for the postal charges.

Hi All;

I am putting together a new radio site which will contain a section on modifications.

Do any of you have any good, or new mods for scanners, or transceivers? I already have the ones found at qth/qrz and barc.
What I am looking for is *new* mods, or websites where they can be found, although with the websites, only send details is those websites have the mods in text form, and not HTML

Thanks In Advance;
Stew

5160. ALINCO web page price warning!

Newsgroup: rec.radio.amateur.misc
Date: 1999-03-02 00:00:00 UTC
From: rsdeputy@aol.com
Message-ID: <19990301210057.18429.00000849@ng17.aol.com>
Source record: 149153

I thought I better post this as a service to any others who might be using ALINCO's web page to purchase manuals and accessories for their radios. About a week ago, I purchased from their web page (http://www.alinco.com/usa.html) a owners manual for the DR-110 and a service manual for the DR-130. The web page showed (and as of this writing still shows) the DR-110 manual to be $5.95 and the DR-130 service manual to be $14.95. When my manuals arrived today, I was charged $7.95 for the DR-110 manual and $19.95 for the DR-130 manual. This is a 33.4% markup over what the web page shows. So, I called them and disputed the overcharge. The first two people I talked to told me that they had a price increase and the web page was out of date and that the price I was charged was the "correct" price. I told them it was not good business to jack up the price without telling me they were doing it. And I pointed out that the order confirmation email I got from them also had the old prices on it! When I finally got passed to a third person, I was told they will credit me for the difference. Too bad they won't pay me for the long distance phone call I made to correct their mistake!

So, in closing, if you are planning to order anything from ALINCO's web page, you better call them for current pricing before you press the send button. You just might end up getting charged 33% more than you thought!

>Mark is on loses contact with Air Inc, ("Aeronautical Radio Inc.")

It's usually abbreviated "ARINC" in the trade.

>(possibly due to Air Inc's computer-controlled radios malfunctioning).

don't know if they have a lot of "date" functions there -- they probably worry more about time of day and other propagation measurements to select HF operating frequencies...but then they probably monitor everything they're supposed to use just in case someone's got a stuck or broken radio..

>Now those pilots are unsure if there's another plane at their altitude
>that might be crossing their flight path, for Air-Inc normally does the
>choreograph work for such transoceanic flights. Now what, Bill?

TCAS/Mode-S..the aircraft talk amongst themselves now.

Radar doesn't have the resolution or the senstivity that the TCAS system can
provide.

Radar is for finding stuff like storms and turbulence.

Collision avoidance is handled by TCAS.

Get rid of your predjudices (however that's spelled)....
Anyway.. I use ham-radio (well, not much yet.. mostly just 2meters/440) and
I use computers, but I build & program computers as a hobby.. I'm about
ready to build an interface (A dumb tnc, I guess) and write a terminal prog
for the ham-radio, but I don't plan on ever 'tinkering' with the radio, so
am I still an 'appliance-operator'?....

Jeffrey Herman <jeffreyh@Hawaii.Edu> wrote in message >

Has anyone here bought used equipment through the mail?

I found a TS-830s for sale from a gentleman near Buffalo, NY. I think I am going to buy it. It doesn't have a CW filter, but I can install it well enough.

So, my options are to have him ship it COD UPS, or I can drive to Buffalo this weekend. I live near Detroit, so I could drive there and back in a day.

Someone mentioned a WEB site for parts for Kenwood equipment a while back. Would you please repeat that?

Thanks in advance
Bob

Mr. Fisher hasn't been getting his much needed attention on the ham lists lately, so he has switched to other lists. This is from a divorce support group.

He has also infested Jewish news groups, weather news groups, any place he can find so that SOMEBODY will pay attention to him.

Bob

>Hardly anyone listens to broadcast radio anymore?
>You're joking, right?...
>

The other problem with the scenario of broadcast radio dying is that despite
the cookie cutter formats, the chain ownership, and sheer blandness for
the most part, the amount of money that radio attracted in the form of
advertising is apparently way up. One can offer various explanations, but
if people aren't listening, those that listen, must be buying a lot of things
and services from those who advertise.

>
>

Very rare! The last Heathkit I found was an infrared security system, unbuilt. I found it at a hamfest and the fellow had about six of them, as I recall.

A friend and I assembled it, but we had to burn in the capacitors for 24 hours before it would work. (I don't know how old the unit was). Anyway, that would be a consideration if you find the SB102!

For comparison, my son and I recently purchased an Oldsmobile which had been sitting in a garage for many years. The car only had 50,000 miles on it, and we got it cheap. But we had to replace numerous rubber things (door gaskets, seals, belts, etc.). Then, we started on the brakes. <grin>

We wound up with a pretty good car, however, We drove it from North Carolina to Houston with no problems, and it's still running up and down I-10 to this day.

>nightmare. Mission Impossible!

You must have your head in the sand, Jack. Do you not READ?

Let's talk about the cases in Arizona, New Orleans, and half-dozen other cities where bootleggers and jammers have been shut down, hard!

Were you sleeping this past week when the FCC shut down an entire repeater because of unlicensed stations?

>Bootleggers don't use call signs, at least legal ones.
>Smell the roses & wake Up!
>
>

Call signs? Don't make us laugh! If you were a real ham, you would know how stupid that remark is in view of current technology. Okay, so you're gonna tell me you're a ham--you just don't want to give your call sign. Fine. Then go to QST (March 99) and look at page 69, bottom right corner (in the box). See the web sites under CHANGES AT AGRELO. That little black box DFs signals as brief as a "Kerchunk". The really awesome thing about it is that it is most accurate when mounted in a moving vehicle (which cancels multi-path).

By the way, "Jack", welcome to the Internet. I know you're a newbie, or you would have known better than to make a blanket statement that two meters is "full of bootleggers from 144 to 148." You'll learn quickly that NG participants will ask for specifics: In what city did you listen? What time of day? What kind of receiver and antenna did you use?

In fact, now that I mention it, "Jack", what city DID you listen in? And what kind of rig were you using?

: trouble with that is, I don't know of any FRS radios with DTMF keypads.
: Are there any? Better still, are there any amateur transceivers that can
: transmit a full-duplex, encrypted, digital signal? If the answer is no,
: then why is the amateur market so technologically far behind cellular?
Amateur radio is not really technologically far behind cellular. Take a
gander at the frequency that the cell system uses and you will see how
such a small device can have the ability to run full duplex. Then look at
the size of the duplexers that you need for say 2 meter full duplex
operation. By the way, in the ancient past car phones used to run in the
400 meg ranges and they had a trunk full of equeipment, well not full but
a rather large transciever/duplexer unit back there to accomplish this.
Physical size of components in the system are very decisive factors in the
game. Not so much the technological ability.

As I am sure you will hear the standard ones - this is a slightly
wierd one:

Black Beauty Races Other Young Geldings Beating Very Great Winners

for Silver or Gold (to cover the tolerance bands)

I believe this was thought up by somebody who was upset about the
objections to:

Bad Boys Rape Other Young Girls But Violet Gives Willingly
for Silver or Gold.

which has always been the standard one I have heard.

Side comment - Political Correctness of color code mnenomics. After
having just spent several years in the Navy as an Electronics Tech, I
was sitting in the sauna at the Intramural gym at the University of
Washington when someone was so upset at my suggestion that a tech might
find a dirty mnenomic easier to remember that he started yelling at me
about being racist, sexist and classist. This was a bit confusing to me
because I didn't think it likely that I was looking down on myself as
inferior, having just spent several years as an enlisted sailor, and as
far as I could tell race had never entered into it. I suppose he could
have had some point on sexist, because I was willing to admit to the use
of a mmnemonic that was unfavorable to women, but I didn't intend any
advocacy of rape or prostitution by using a convenient memory device.
For a few minutes I thought things were going to get to the point of

fisticuffs. This can be a touchy issue.

At the time there was a big thing going because someone had made a
sexual harassment charge because of the "Violet" mnemonic being
mentioned in an EE lecture.

Sure... you can find 'em on eBay, at swap meets, in magazine ads,
and so forth. But be prepared to spend ALL of your life's saving
on them! Unbuilt Heathkits make Collins gear seem cheap.

5210. vols needed for 1999 Bay to Breakers

Newsgroup: rec.radio.amateur.misc
Date: 1999-03-02 00:00:00 UTC
From: Bay to Breakers Red Cross Team <baybreak99@hotmail.com>
Message-ID: <36DC11DE.C76B168F@hotmail.com>
Source record: 149203
Cross-posted to: misc.emerg-services,sci.med.nursing,rec.radio.amateur.misc

On Sunday May 16th, 1999 nearly 100,000 people will run 7.2 miles
from the San Francisco Bay to the Pacific Ocean. Some will
wear running shorts, some wear costumes, and a few wear nothing.

Some of these runners will also fall and scrape their knees/elbows,
many will get blisters, and a few will have some serious medical
problem. The Red Cross is there to help these folks make it to
the finish line, or the ER as needed.

In the past years we have seen many lives saved by the prompt efforts
of medical and communications volunteers like you. If you are an EMT,
RN, LVN, MD, have been trained in Red Cross Emergency Response, or
are an amateur radio operator, we need your help.

There is a big need for medics and communicators who are fit and
able to run along with the pack of runners. We deploy 20 foot
patrol teams along the way. There are also 8 fixed aid stations
along the way.

The day starts at 0500 and goes till 1500. We feed you lunch and
give you a T-Shirt.

To sign up please reply to this message and and edit to include
your personal information. You will also need to print this
and send it via snail mail with copies of your certifications.
After sending in the application you will receive an info packet
around the first week of May.

For more info see the Bay to Breakers website,
http://www.sfgate.com/breakers/index.html
or email us at baybreak99@hotmail.com,
or call Natalie at 425-427-8000.

Send it to:

Wouldn't prevention be a better solution? Why encourage such a
self-destructive behaviour pattern?

Again, if this activity is putting people in such danger that EMS action
was needed to save their lives, isn't something wrong here?

It probably would be really cool to build one from the box, but
they are rare and very expensive. You might find just as much
satisfaction from finding one that doesn't work (or work well) in good
cosmetic condition and then rebuilding it. After all, most of the old
carbon composition resistors will be out of value, the electrolytics
could be bad, etc. I am reworking a SB-300 now, and it is close enough
to building it new to suit my tastes.

> And that's just my opinion, I could be wrong. :)

And then again, you might be right.

In general, hams are honest folks, and they are not anonymous. You
should check out the dealers in new and used equipment, to see that
what you are paying is reasonable, but I hear very little complaints
about people buying stuff from hams. Especially HF stuff.

Hey folks,

Does this not show we OWN these Stumper fools or what? This idiot knows
nothing about what this "fray" is all about. He sits there all night with
his ear glued to the speaker...listening for anything at all, so he can
"reply" here. What a life this young man has. Course now that you have
come clean, please resist transmitting on 3901 again until you get a license
to do so. You wouldn't want to go down that ole Franky Todd (SJ # 18) road
now would you? BTW stumper, how you like Bama? A bit of advice, keep your
mouth shut in public, those good Alabama folks wont put up with your chip
too long. When I head back home to Alabama, I'll drop by for a nice chit
chat. What say punk?

I'm looking for a dual band mobile radio, basic requirements are remote mount, alpha tags, and preferably wide band RX (UHF would be nice to get to 488, VHF 160 is about as high, with AM air reception). Anyone have any mods for the Kenwood V7A to open it up to 488? The Yaesu 8100 looks nice, but lacks Alpha. I do news photography on the side, and our fire departments are on 488, so would like to listen to both.. Please reply here and to eplatt at wco dot com please.

Thanks.
To reply via e-mail, please use eplatt at wco period com. Sorry, but this is the only way to despam my address.

Heck, that's nothing. The inverter and trigger transformers in disposable camera flash units use something like #44 - #46! Talk about being weaker than a hair! :) Try to disassemble one of those without breaking the wire!

With the possible exception of the "socialist" word, this sounds like
a good description of the room your computer is located in.

>FCC JAMS HAMS,

How many times are you going to re-post this silly diatribe unchanged
to the same set of newsgroups? Are you drunk? You're certainly dull.

Dave

5229. AES?

Newsgroup: rec.radio.amateur.misc
Date: 1999-03-03 00:00:00 UTC
From: JD Erb <ka0mgm@netins.net>
Message-ID: <7bkkb8jpg1@ins8.netins.net>
Source record: 148972

I have done business with AES out of Milwaukee many times over the years. Early this year, I ordered an Oak Bay low pass filter after I fried my old B&W. After waiting for quite a while, we called LD, only to be told the item was back ordered.
I received no notification of backorder even though I had included my email ad with my order.
I inquired for the 3rd time this week only to be met with a short, curt "the part is still back ordered". No approximate shipping date, nothing.
Am I the only one having this problem or is this common business practice with AES these days?
Any recommendations on another mail order business to buy ham gear from?
Thanks.

Jim

I have two transmitters, one on 6 meters and one on 2 meters, for my repeater under construction. I will be using a dual-band repeater antenna and need to find out if I need a transmitter combiner or would a duplexer, such as the kind used with multi-band transceivers, work?

Thank you,
Christopher Zeman, KB9RHA

#1) It's called "self-policing"....remember????

You are kidding right?

#2) If the guy simply warns the parents about vulgar amateur activity, that's not a threat to ANYONE!

Its not up to ANYONE to warn ANYBODY about ANYTHING unless you have the PROPER AUTHORITY to do so. Since when is it your responsibility to parent other peoples kids??????!!!!!!!

#3) Now go back to your 75m QSO, with all your old fart friends, and talk about your heart ailments, and your arthritis, and your bowel movements, etc.

GROW UP!!!! If you cant play by the rules, get out of the game. Do you actually (or nievely) think that this is the first time the bands have had problems with nitwits????? Wake up. Save the vigiliatism for the Charles Bronson movies.

5232. .Jobs in Electronics

If you're interested in putting your electronics knowledge to work, check out this offer:

http://www.faa.gov/ats/best/

You will have to jump through a few hoops(it is a government job, afterall), but they are looking to hire by the end of this year.

From: munsch@ibm.net
Message-ID: <36de028e@news1.us.ibm.net>
Source record: 148979
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.swap

If there are no frequency related spurious (harmonics and the like) then a simple band split combiner will be adequate. If, on the other hand for example, some particular harmonic of, say the 2 meter transmitter falls within the passband of the 6 meter receiver, there ain't no way you're gonna make it work anyway. Suggestion: Try the two repeaters through a combiner into a dummy load and see what happens. Band reject duplexers, the kind we can afford, do not suppress out of band emissions very much. A transmitter suck out cavity on each opposite receiver may be necessary, depending on the specific hardware. The old tube type boat anchors were better in this regard. We all had to relearn the isolation curves when solid state came along.

5237. Need info for Project: Compiling 6m Net List.

Newsgroup: rec.radio.amateur.misc
Date: 1999-03-03 00:00:00 UTC
From: "S.M.A.R.C." <N7RCM@POBOX.COM>
Message-ID: <7bkt71$1pc@enews4.newsguy.com>
Source record: 148980
Cross-posted to: alt.ham-radio.marketplace,rec.radio.amateur.misc,rec.radio.swap

I totally enjoy working six meter. So i'm taking it upon myself to put together the biggest list of 6m nets around, with your help. Whether just in the U.S. or the world.

We need more activity on this band. Not because we'll loose it, because no one want's low band anymore, but because of getting the hobby a kick to get up and going.

I don't know about your neck of the woods, but here in Las Vegas there are about 30 or so repeaters, not just on six, but other bands, and there are times when you will not here a single person for hours.

If we had some sort of net going on all the time, not 24hrs now, but in some places the times would be feesable and if you want to get up at 3am local time and work a DX station from Europe or so, you may just catch that great opening.

So, how about some help. I'll post the list, if it turns out to be worth posting, on these amateur newsgroups, some of the reflectors and maybe upload, with permission, on some of the amateur web pages so all can take advantage of it.

You all know that the repeater directory guide book does a fairly good job of listing repeaters, but what about nets and stuff. We'd have to listen 24hrs of so many freqs just to catch a net.

Here's what I'll need. The net name and location, Day or Days held, The time that it's held in UTC format, Frequency (ies), whether in AM, FM, SSB, PL if used, and who the net control operator is.

What I'd also like is the call, if possible, of the machine or who is the owner, club etc.

Thanks all in advance and we'll see where this goes. 73 de N7RCM

VERY impressive credentials and a sweeping
enforcement statement!

You are more than qualified to enlighten us
neophytes then as to how, given this massive enforcement
army, that KV4FZ has managed for over 25 years to
elude and frustrate the commission? Perhaps he has
"thought harder and worked smarter" than this mighty
enforcement army which has mobilized against him?

From: algo@bellatlantic.net
Message-ID: <7bje2b$q08$6@news-2.news.gte.net>
Source record: 149023

This Saturday, March 6, is the Split Rock Amateur Radio Assn Hamfest, in Parsippany NJ, Route 46 and Baldwin Road. This is the first hamfest of the season in the Northern NJ area and is well attended by vendors and buyers with cabin fever. Easy access from Interstate 80 and 287, talk in on 146.985, PL 131.8 and on 146.52 simplex. Short drive from anywhere in NY metropolitan area and Eastern Pennsylvania. VE session for getting/upgrading the license. League speaker is Ed Hare, W1RFI, from ARRL Hq. Tailgating if weather permits.

Vendors, 6:30 AM, buyers 8:00 AM. VE Registration at 8:30 AM for examinations to begin at 9 AM.

If you have not checked out the Message board on the CB City website, you are missing out. There are tons of CB & HAM gear in there listed by all sorts of people. If you have something for sale you may want to post it there as well. In 2 months time it has had over 6,000 hits, so it is being viewed by a lot of people. Don't just take my word for it, check it out for yourself. You will be glad that you did.

It is located at www.cbcity.com

Nope. Herb has taken full advangage of all the "appeal"
process that is available to all citizens of the USA - if
one can afford it. You can bet it has cost him plenty. And
recently I read that his 'final appeal' has been denied, so
now he WILL be leaving the air.....

Do license plate letters and nymbers in your head as you drive around. Sounds stupid, but it works. Also listen to W1AW code practice. About 15-20 min 3 or 4 times a week will do it in abt 5 or 6 wks.

Chris,

I don't recommend "artificial" practice techniques such as you describe (short groups of characters). Listen to on-the-air QSOs and W1AW code practice. Copy as best you can and don't worry if you're not getting every character.

Another technique that I used was to create a lot of short text files (about a paragraph or so in length) and got a shareware program that would send morse on the computer and listened to these at various speeds. Again, don't worry about 100 percent copy. In my case I used Aesop's Fables, excerpts from The Gettysbury Address, etc. -- anything that I was not famaliar with. A good morse program is the one from Stormy Weather Software.

These techniques worked for me. When I took my General license test, to my utter amazement I passed the 20 WPM code test. The VEs had to talk me into giving it a try, and of course I'm glad they did.

Good luck and 73

And they booked me for two presentations, one of them is a hands-on demo (my hands) of the construction of an all-copper 2-meter 4-element Yagi. (See firsthand whether I set my tie on fire with the blowtorch, or set off the smoke alarm and sprinkler system). The other presentation is on RFI and the VHF amateur.

Both are followed by Q&A ("Stump the Speaker -- TM"). Come by and harrass me. :-)

Hi

Just a warning : the packet radio firmware in this transceiver is n o t compatible with DAMA . Here in Europe at least in Germany you can not use it to connect to a digipeater because of this mode lacking. There was an announcement by Kenwood Europe that you can return the unit and get your money back.
Maybe you are not using DAMA at all over there .

Gee, who would want to visit a socialist hellhole
populated by excruciatingly dull drunks.

Returning to the topic of the thread and
reporting some of the details at my website,
http://www.atlcom.net/~geozim/index.htm

FCC JAMS HAMS,
the FCC is a criminal faction of a criminal executive branch,
engaged in a criminal coverup which is further protected by
a criminal Justice Department, also a party to the crime.

The FCC knowingly, intentional, deliberately, willfully and
purposefully supplied radio jamming equipment to the FBI and,
with reasonable assumption, to the US Air Force for the
purpose of jamming AM and FM radio broadcasters, TV
broadcasters and the Amateur Radio Service. The amateur
station jammed was defined as a Title 47, Code of Federal
Regulations, Part 97.405 Station in Distress, relaying
emergency communications critical to safety of human life.
As a result, appoximately 100 people died.

FCC is also a deliberate violator of the Freedom of
Information Act, using an exemption of documents not
allowed under the list of exempted documents types.
Whereas, I have not posted details on this to the
website yet, you can read the 36 descriptions of
FOIA requested documents in the FOIA Administrative
Appeal letter. All of these are denied on the basis
that I have figured out what the nature and content
of the documents are, and the FCC does not want to
verify my logical, analytical and deductive work
that has narrowed down the documents almost to the
point of writting them myself. Actually, I already
have two of the documents, and stand ready to
publish them, as soon as I can arrange to leave the
country, and post them from a safe place.

Neither last nor least, but in closing on FCC criminality,
FCC is a criminal co-conspirator with FBI to classify
documents pertaining to the criminal operations of the
FCC and FBI. Such classification of documents for the

purpose of avoiding criminal prosecution is specifically described as a criminal violation in any Executive Order pertaining to such classification at the time of classification.

Get the FCC out of the control business, contact your Congressman, ask that he support Henry Hyde of the House Judiciary Committee to convene a hearing into the criminal coverup by FCC Chairman Kennard of the criminal operations of the FCC and FBI and US Air Force engaged in Communications Act violations.

Get the American Radio Relay League out of its tyrannical misrepresentation of the amateur community. Publish the fact that the ARRL board voted not to reveal the criminal operations of the FCC and FBI. What decent person would be a member of such a criminal organization. If you are in the ARRL, moral integrity demands you quit.

You are on the right track looking for Jerry Zilliaks high speed code
course.His call is KB6MT I think,look him up on QRZ I tried a few
things for 3 months and was at 5WPM then got his course and listened
only while driving (and delivering the mail at the same time) and went
to 23WPM in to months.0-23WPM in 5 months.Another hint,DO NOT PRACTICE
SENDING.Plenty of time for that later,same goes for trying to copy off
the air.AB7RS

Now that we have heard from Canada's Minister of Tourism,
maybe we can reward him by reducing the exchange rate to
$0.02 per Canookie dollar. I believe they are printing
their script on Caribou dung these days, right Chuck?
Or we could recend the mutual defense pact and allow
the Ethiopian Navy to land their dugout canoes and
take over their country and teach them a real language
rather than that silly French.

Returning the discussion to the original topic I
report some of the details at my website,
http://www.atlcom.net/~geozim/index.htm

FCC JAMS HAMS:
the FCC is a criminal faction of a criminal executive branch,
engaged in a criminal coverup which is further protected by
a criminal Justice Department, also a party to the crime.

The FCC knowingly, intentional, deliberately, willfully and
purposefully supplied radio jamming equipment to the FBI and,
with reasonable assumption, to the US Air Force for the
purpose of jamming AM and FM radio broadcasters, TV
broadcasters and the Amateur Radio Service. The amateur
station jammed was defined as a Title 47, Code of Federal
Regulations, Part 97.405 Station in Distress, relaying
emergency communications critical to safety of human life.
As a result, appoximately 100 people died.

FCC is also a deliberate violator of the Freedom of
Information Act, using an exemption of documents not
allowed under the list of exempted documents types.
Whereas, I have not posted details on this to the
website yet, you can read the 36 descriptions of
FOIA requested documents in the FOIA Administrative
Appeal letter. All of these are denied on the basis
that I have figured out what the nature and content
of the documents are, and the FCC does not want to

verify my logical, analytical and deductive work
that has narrowed down the documents almost to the
point of writting them myself. Actually, I already
have two of the documents, and stand ready to
publish them, as soon as I can arrange to leave the
country, and post them from a safe place.

Neither last nor least, but in closing on FCC criminality,
FCC is a criminal co-conspirator with FBI to classify
documents pertaining to the criminal operations of the
FCC and FBI. Such classification of documents for the
purpose of avoiding criminal prosecution is specifically
described as a criminal violation in any Executive Order
pertaining to such classification at the time of
classification.

Get the FCC out of the control business, contact your
Congressman, ask that he support Henry Hyde of the House
Judiciary Committee to convene a hearing into the
criminal coverup by FCC Chairman Kennard of the
criminal operations of the FCC and FBI and US Air
Force engaged in Communications Act violations.

Get the American Radio Relay League out of its

The stock transformer has a hard time handling just the two tubes that
are in it (the JB10-80 model).

The JB2000 does not have enough drive from the built-in driver to 'tax'
the transformer...

> The one knob wonder w/ a bypassed driver

And the smaller transformer!

Hi,
I have a Tait Mariner II marine band transceiver that I wish to swap
for an amateur transceiver. The Tait is synthesized, covers all
marine channels, has Channel 16 scan and dual watch. The
transmitter is rated at 35W output. The unit is 12V operated.

I am interested in swapping for an amateur radio transceiver,
either a 2m or 70cm mobile rig, or even an HF rig. What have you?

I live in South Auckland.

Would you believe 468/Fmhz = a 1/2 wave dipole.
Assuming free space of course, and a wire element.

To determine the length of a harmonic wire antenna (1/2 wave multiples).
use the following: 492(N-0.05)/Freq. in Mhz. Where N= number of HALF
waves in the antenna. This formula takes into account the end effect of
longer wire antenna's.

P.S. Dont try to feed it directly with 50 ohm coax..unless its a simple
half wave.

Well said, Mr. Kane!

The following is a repost for those who missed it first time around:

SB QST ARL ARLB013
ARLB013 FCC shuts down troublesome Bay Area repeater

The FCC has shut down for 120 days the K7IJ repeater facility on Grizzly Peak in the San Francisco Bay area. The FCC also told the licensee, Bruce Wachtell of Carson City, Nevada, that his ham ticket could be in jeopardy. The FCC took the action by modifying K7IJ's license to prohibit repeater operation starting midnight February 28, 1999. The repeater operates on 145.29, 223.78, 440.175, and 441.175 MHz.

In related actions, the FCC also set aside recent license grants of four individuals accused of unlicensed operation on the repeater prior to obtaining their amateur tickets and other behavior. The cases, the first major VHF/UHF enforcement actions the FCC has taken in recent months, were brought to the Commission's attention by the Amateur Auxiliary.

The FCC's Riley Hollingsworth, K4ZDH, said that for almost a year, the repeater's control operator, identified as Blake B. Jenkins, N6YSA, of Berkeley, California, ''has apparently not only allowed, but encouraged, use of the repeater by unlicensed operators, rebroadcast of cordless telephone calls, playing of music, and profanity and obscenity.'' He said extended QSOs have taken place between the control operator and unlicensed stations.

Hollingsworth said the situation was brought to Wachtell's attention, but nothing was done. He said Jenkins' ''actions and omissions'' while control operator were under separate FCC review, along with those of the secondary control op, Steven R. Rossi, KE6LNH, of Novato, California. The FCC set aside the recent license grants or upgrades of James C. Walker, KF6VAA; Gordon B. Reese III, KF6QKA; Michael J. Nichols, KF6UAS; and Eric B. Shuler, KF6BMG (ex-KF6UJU) pending further investigation. The FCC has permitted Reese, who just upgraded to Tech Plus, to retain his Technician operating privileges while its investigation continues.

The FCC also issued warnings to two other individuals in the case.

5304. Re: Resistor Color Code Acronym

Newsgroup: rec.radio.amateur.misc
Date: 1999-03-03 00:00:00 UTC
From: "Robinson, AB5VH" <rc@crusoe.org>
Message-ID: <7bi63g$49$1@news-2.news.gte.net>
Source record: 149108

Yeah, the Political Correctness thing is getting a bit tiresome. For some, not being PC can even cost them their job or reputation. All the wimps, SNAGS, and various pointy head types who have always secretly wanted to become a "jackbooted thug" can now do so. All they have to do is join the "thought police" and participate in the PC witch-hunts. Instant power.

Respect for minorities, etc is a good thing,, but respect for EVERYBODY should neatly cover that. Respect MY right to speak, and you will know my thoughts. Force me in some way to keep my thoughts a secret, and there is just one more festering sore in our society; one more bubble of malcontent that exists unbeknownst to the blissfully ignorant pollyannas who think everything is just peachy.

In the case of the resistor mnemonic, we are looking at a nonsensical phrase that has no meaning except in the order of the first letter of each word. It has nothing to do with anything, and anybody who reads disrespect in it is being pretty damn paranoid, or is just on the PC power trip.

As a practical way of dealing with the problem, I suggest letting the students make up their own mnemonic, giving a non-controversial one as an example, and recommending that the student's mnemonic be outrageous enough to easily remember. That should keep the PC thugs at bay, and still retain a valuable teaching tool.

5305. CW ques: Koch method etc

Newsgroup: rec.radio.amateur.misc
Date: 1999-03-03 00:00:00 UTC
From: brewsterc@excite.com
Message-ID: <brewsterc-0203992203330001@pm5-151.msp.infi.net>
Source record: 149109

I'm in the usual frustrated condition about raising my code speed (currently around 7--dismal). I've read lots of people's advice, including one about the Koch method. It pointed out that a code tutor box allows one to use the method, so I bought an MFJ. Now I realize I'm not totally clear on the method. I'm supposed to listen to short character groups at a high speed and gradually make the groups longer. So I'm using three-letter groups. But I have to use the box's Pause function after each group or I don't have a prayer of copying. Is this how the method is supposed to work? My pauses are way longer than normal word spacing. Way *way* longer.

Related question. I want to get tapes to use not as my main method, but to listen to while I commute. I've heard recommendations for some methods, but what about specifically for listening in the car? Also, where does one find these, such as Jerry Ziliak's? I can only find ARRL (I did NOT like their beginner set!), Gordon West, and Code Quick. Thanks for answers...

Request: If you respond to this posting, please send me a copy. My net access is intermittent. Many thanks...

Disloyal to whom, George? To you? I owe you no allegiance. Disloyal to my country? I don't need to prove myself to you. I served my country in Vietnam during my military days and I'm doing so now in the Foreign Service.

Psssst, George--let me clue you in. You don't get to decide who is loyal and who isn't. Nobody put you in charge.

What medicine? Nobody else has any, you took it
ALL, YOU SHAMELESS DOPER! I guess it would be
impossible for someone to be clean and sober
and have any self respect when they were named
after the HERDY GERDY!!! ;-)

Now back to what the folks really want and
some of the details at my website,
http://www.atlcom.net/~geozim/index.htm

FCC JAMS HAMS:
the FCC is a criminal faction of a criminal executive branch,
engaged in a criminal coverup which is further protected by
a criminal Justice Department, also a party to the crime.

The FCC knowingly, intentional, deliberately, willfully and
purposefully supplied radio jamming equipment to the FBI and,
with reasonable assumption, to the US Air Force for the
purpose of jamming AM and FM radio broadcasters, TV
broadcasters and the Amateur Radio Service. The amateur
station jammed was defined as a Title 47, Code of Federal
Regulations, Part 97.405 Station in Distress, relaying
emergency communications critical to safety of human life.
As a result, appoximately 100 people died.

FCC is also a deliberate violator of the Freedom of
Information Act, using an exemption of documents not
allowed under the list of exempted documents types.
Whereas, I have not posted details on this to the
website yet, you can read the 36 descriptions of
FOIA requested documents in the FOIA Administrative
Appeal letter. All of these are denied on the basis
that I have figured out what the nature and content
of the documents are, and the FCC does not want to
verify my logical, analytical and deductive work
that has narrowed down the documents almost to the
point of writting them myself. Actually, I already
have two of the documents, and stand ready to
publish them, as soon as I can arrange to leave the
country, and post them from a safe place.

Neither last nor least, but in closing on FCC criminality,
FCC is a criminal co-conspirator with FBI to classify
documents pertaining to the criminal operations of the
FCC and FBI. Such classification of documents for the
purpose of avoiding criminal prosecution is specifically
described as a criminal violation in any Executive Order
pertaining to such classification at the time of
classification.

Get the FCC out of the control business, contact your
Congressman, ask that he support Henry Hyde of the House
Judiciary Committee to convene a hearing into the
criminal coverup by FCC Chairman Kennard of the
criminal operations of the FCC and FBI and US Air
Force engaged in Communications Act violations.

Get the American Radio Relay League out of its
tyrannical misrepresentation of the amateur community.
Publish the fact that the ARRL board voted not to
reveal the criminal operations of the FCC and FBI.
What decent person would be a member of such
a criminal organization. If you are in the ARRL,
moral integrity demands you quit.

March 5, 1999
Target: rec.radio.amateur.*, uk.radio.amateur

Welcome to the W8MMQ Wire, for March 5, 1999! This newsletter is distributed weekly by W8MMQ and the Radio Society of Central Michigan, and is available free to all radio amateurs.

If you would like to receive this newsletter via email, or would like to be removed from our mailing list, contact Dan/W8MMQ at w8mmq@voyager.net. Your email will be answered as soon as possible.

In this issue: no First Amendment protection for rules violators; the FCC shuts down San Francisco Bay repeater; when microchips meet RF; upcoming contest information; and much more!

NO FIRST AMENDMENT PROTECTION FOR RULES VIOLATORS
If you are one of those hams who feel that you can violate the Amateur Service rules and then get away with it by claiming the protection of the Constitution's First Amendment, the FCC has a surprise for you. The agency's Riley Hollingsworth, K4ZDH says that the First Amendment is not going to protect rules violators in the Amateur Radio Service. The FCC attorney says that the two are not even remotely related:

Hollingsworth: "It has nothing to do with the First Amendment. The First Amendment is alive and well and certainly does not need any help from Amateur Radio. Amateur Radio was not set up to enhance the First Amendment. If these groups keep it up, they will be on Internet chat lines in the future talking about how they pushed for First Amendment on ham radio. They will be asking whatever did happen to those ham frequencies? Who bought them at auction? What third-world countries ended up using them for a national telephone system?

This has nothing to do with the First Amendment and that is not the justification for Amateur Radio."

Hollingsworth made that comment in his exclusive interview with RAIN Producer Hap Holly, KC9RP. In another area, Hollingsworth also says that the FCC is happy with the results of his two forays into on-the-air ham radio trouble spots. As a result, K4ZDH has decided to continue to show up unexpectedly on the air. Who knows, he might even become a part of your next QSO:

Hollingsworth: "This on the air work will be done periodically. We are taking an in-your-face approach to clear up the problems and I am more than willing to do it."

By now you may be wondering what other surprises the FCC and Hollingsworth have in store as they proceed with this ham radio clean-up. There are quite a few including the fact that inspectors can now accurately pin point any signal within a few feet even if they are monitoring from thousands of miles away.

Taken from Amateur Radio Newsline, 2/26/99

THE FCC SHUTS DOWN SAN FRANCISCO BAY REPEATER
The FCC has shut down for 120 days the K7IJ repeater facility on Grizzly Peak in the San Francisco Bay area and told the licensee his ham ticket could be in jeopardy. The FCC took the action by modifying K7IJ's license to prohibit repeater operation starting midnight February 28, 1999. The repeater operates on 145.29, 223.78, 440.175, and 441.175 MHz. The FCC also set aside recent license grants of four individuals accused of unlicensed operation on the repeater prior to obtaining their amateur tickets and other behavior. The cases, the first major VHF/UHF enforcement actions the FCC has taken in recent months, were brought to the Commission's attention by the Amateur Auxiliary.

The FCC's Riley Hollingsworth, K4ZDH, said that for almost a year, the repeater's control operator, identified as Blake B. Jenkins, N6YSA, of Berkeley, California, "has apparently not only allowed, but encouraged, use of the repeater by unlicensed operators, rebroadcast of cordless telephone calls, playing of music, and profanity and obscenity." He said extended QSOs have taken place between the control operator and unlicensed stations.

Hollingsworth said the situation was brought to the attention of the licensee, Bruce Wachtell of Carson City, Nevada, but nothing was done. "Such operations are not only contrary to the Amateur Radio Service rules and frequency allocations, but degrade the service for legitimate radio licensees as well," Hollingsworth said in a certified letter to Wachtell February 25. "The operation of the K7IJ repeater system in this manner may reflect adversely upon your qualifications to hold a Commission license."

Hollingsworth said Jenkins' "actions and omissions" while control operator were under separate FCC review, along with those of the secondary control op, Steven R. Rossi, KE6LNH, of Novato, California. The FCC set aside the recent license grants or upgrades of James C. Walker, KF6VAA; Gordon B. Reese III, KF6QKA; Michael J. Nichols, KF6UAS; and Eric B. Shuler, KF6BMG (ex-KF6UJU) pending further investigation. The FCC has permitted Reese, who just upgraded to Tech Plus, to retain his Technician operating privileges while its investigation continues.

The FCC also warned Mervyn Ehambrave of E Palo Alto, California, about unlicensed operation on the K7IJ repeater, and warned Timmy O Sheen Sr, N6MZA, about behavior including "jamming and rebroadcasts of cordless phones" on the repeater, Hollingsworth said.

Taken from the ARRL Letter, 2/26/99

WHEN MICROCHIPS MEET RF ...
In the old days, the worst thing that stray RF would do to a car was cause static on the optional, in-dash AM radio. Today, cars, trucks, and vans should be renamed mobile computers due to the extensive use of micro-chips to control almost every aspect of operation. As you know, these pesky, little things really donï¿½t like RF very much.

Outside RF sources, such as the former Voice of America site near Cincinnati, have been known to actually cause early electronics to fail entirely. Whereas, our own ham radios have caused everything from glowing dashlights, rear window-wipers running on their own, to uncontrolled acceleration in 1988 Mustang GTï¿½s that were equipped with 5-liter V-8ï¿½s.

You ask, "why does all this mayhem occur when chip meets RF?" Well, we can thank the Faraday effect for the problem because in reality, a printed-circuit is no more than a snare of copper loops. To illustrate, all printed circuits contain various copper traces acting as miniature antennas. In fact, long, skinny, numerous parallel traces pick up the most unwanted signals. To combat the effect, manufacturers try to keep these traces as short as possible and avoid parallel runs. Further, the designers shield the chips and boards using ground planes and sealed EM-resistant boxes. Nevertheless, how do the car companies know that the shielding will really work?

Per Dan Neil, contributing editor with Car and Driver magazine, companies go directly to the source: huge, short-wave transmitters like the Voice of America site in Pitts County, North Carolina. This 500,000 watt monster has played host to testing everything from the exotic Porsche Boxster and BMW Z3 to good, ole GM products.

On the day of Danï¿½s visit to VOA, a team from Volkswagen found power densities of 150 volts per meter within the siteï¿½s antenna farm. Talk about being fried! In fact, the VW engineering team trolling the farm looking for the highest power densities wore special RF-resistant suits to deflect some of the energy. Another favorite site for testing is the Catholic Churchï¿½s Eternal Word facility in Birmingham, Alabama. This site has also been found to contain power densities equaling or exceeding 100 V/m.

So the next time that you tool down the road listening to a SW station on your mobile HF-rig, just think, that station may have actually helped prevent the premature deployment of your airbag as that semi goes by running 1000 watts to talk on the Teen-agerï¿½s Net in Southern California!

via Scott/W8SRN (w8srn@arrl.net)

POLICE DEPARTMENT LOSES ITS REPEATER
In Miami, Oklahoma, police were recently forced to use 11-meters to handle their radio traffic.

Apparently, the North East Oklahoma Electric Cooperative repossessed the police department's repeater system after they refused to pay the

monthly bill.

Sheriff Jack Harkins said that the department had purchased the repeater in 1997, and have always had trouble with it. They were not going to pay the bill until the repeater was serviced.

The police department did pay the $2,100 bill the next day, and the repeater was back on the air.

According to the Cooperative, the repeater was never removed from the site, it was simply shut down until payment was received.

W8MMQ/KC8KFZ

UPCOMING CONTESTS AND EVENTS
For the latest amateur radio contest information, visit the ARRL's Contest Calendar, at http://www.arrl.org/contests/. Also, for the latest information on upcoming events and hamfests, visit the ARRL's Hamfest Calendar, at http://www.arrl.org/hamfests.html.

The 1999 ARRL International DX Contest will be held on March 6 and 7. For more information on the contest, visit http://www2.arrl.org/contests/announcements/99/intldx.html.

DX REPORT
From Cuba, T48RAC will be operational from the 1st to the 8th of March. This counts as NA-015 for the Islands on the Air awards programme.

From Hawaii, NE8Z/NH7 is active until the 6th of March, using CW on the WARC bands. This counts as OC-019 for IOTA.

From Seychelles, S79AG and S79XB will be on the air from the 1st to the 14th of March, on 40 and 80 metres only. This counts as AF-024 for IOTA.

And from Wallis and Futuna, FW5FN will be active until the 8th of March, on 10 to 160 metres, using mostly CW, but also some SSB and RTTY. This counts as OC-054 for IOTA.

These DX news items came from the weekly RSGB DX News Sheet, edited by Chris Page, G4BUE.

Taken from the Radio Society of Great Britain

SPOTLIGHT: FEATURED AMATEUR RADIO WEB SITE
From time to time, we review great web sites that have something useful to offer to the amateur radio community. We look at dozens of sites per week, and with the help of the many emails we receive from our readers, we pick one of these great sites and present it to you here.

This time, we feature the KB9JJA Amateur Radio Links Page. This web site has over 1,200 links to various amateur radio web sites, of all types. You will find links to club sites, companies, organizations, individuals' pages, and more.

Bookmarks can sometimes become cumbersome and difficult to manage ... all you have to do is bookmark this one web site, and you are set!

Visit the KB9JJA Links Page at http://users.accessus.net/~dwentz/kb9jja/jja_ham-links.html.

If you have found a web site that you think we should review, just send the url to Dan/W8MMQ at w8mmq@voyager.net. We receive a lot of mail, but will try to get back with you as soon as possible.

AND ... IN CLOSING
Thank you for reading this issue of the W8MMQ Wire. We hope that you have enjoyed it, and please, feel free to pass it along to others.

To read the W8MMQ Wire online, visit http://my.voyager.net/w8mmq/. An archive of past newsletters is now available from the web site.

Information from the following sources was used in the production of this newsletter: Amateur Radio Newsline, the ARRL Letter, the RSGB web site, and other published reports.

Problem is, it creates another Problem.

I recently had to give up chasing some South Pacific DX
because a 20-over-9 CW signal repeating something like
"CBers GO AWAY" was QRMing the DX. I never heard the Mexican/
South American CBer he was trying to evict. Also hearing SSB
Frequency Cops (gee, isn't phone operation illegal on the low end?)
telling the CB (obviously outside the US) that they are in
"violation of Federal Communications Commission Laws" and cannot
operate there, and Cease Immediately. More QRM.

I utter the occasional expletive when I hear the lids, kids and
ladies in whatever Spanish-speaking country operating on "my" band, too.
It's especially frustrating that there's also no rhyme or reason to
operating mode. It's hard to filter FM, AM, and both USB and LSB QRM
at the same time.
Don't know the answer, but QRMing them by plopping the occasional
ASCII and RTTY burst mostly QRMs me and the stations I'm trying to work,
and never seems to drive the interlopers away.
Didja ever notice that during major Contest weekends 10M CW band is
almost void of CB QRM. _Lots_ of "legal" signals seem to be the only
thing that has an effect. Use It or Lose It, I guess.

Being a waitress has got to be one of the worst jobs in the world. Having
lived in Alabama for 20 years I learned that 2.01 plus tips don't go very
far. Most of these ladies are doing this job because it is ALL they can
get. The husband ran off and left them holding the bag. Child support?
good luck. Some of us hams are a bit overbearing. But deep down MOST OF US
are decent human beings. Take care Laura and have a nice day.

97.1 Basis and purpose.

(d) Expansion of the existing reservoir within the amateur radio
SERVICE of trained operators, technicians, and electronics experts.

Of course these two no code geeks would support illegal CB use of 10 meters.
That is where they operate ALL THE TIME. Why is that? Because they are both
too lazy to learn the code. Both are members of the "ME GENERATION".

Can anyone imagine wanting to be like Drew (CBRambo)?? You know what is
interesting about Lloyd? NOTHING. I own these guys so much that they
can't resist making a smart ass comment about ANYTHING I POST. You can
crawl back under your rock now Lloyd, just move rambutt over one.

Newsgroup: rec.radio.amateur.misc
Date: 1999-03-04 00:00:00 UTC
From: Paul Larson <plarson@xmission.com>
Message-ID: <7bmda8$289$1@news.xmission.com>
Source record: 148884

Scott,

My initial post was to point out that those signals are there, and on a regular basis. It is now obivious that many amateurs already had known of their source. I only recently became aware of them, and their increasing numbers. After a lull in my 10 meter operating (due to solars) I was surprised and a bit angry after returning to the band to find the stink.

I prefer to not take a passive approach to the problem, and pretend that it is not there. I would like to see these bums dealt with. The enforcement issue seems likely to change soon.....I am hopeful.

I do not fit the anarchists stereotype outlined, and it certainly does not fit the majority of amateur operators. I also do not feel the need to defend the hobby to someone that is on the outside, trying to look in. That, (as you say) is pointless.

The fun of the hobby for me was derived primarily from learning the technical aspects in relation to an electronics career as a whole. Then operating after building and using home built equipment. Anyone who is starting out in electronics might also see the usefulness of getting a license to accentuate their interests or education in the electronics or wireless communications fields.

So I beleive, operating on the air, is only part of the fun.

The threat, (however you choose to view it) is real. And I think it is time for licensed individuals to do some damn loud whining about illegal operating, instead of doing nothing. Loud whining done constructively, in the correct forum, and to the right people is not all pointless.

PL

Hello to the group,
My name is Mark (KC4NYH) and I have a Sony Mavica FD-7 Digital Camera, the feature are as follows:

1.5 hr battery with quick charger,
2" X 2" Color LCD monitor to view the snap shots,
Writes pics to a 1.44mb floppy drive for PC & Macintosh formats,
Menu driven interface for the following:

resolution change (high/low)
format disk
delete pic from disk
look at thumbnail shot of all pic on disk
and much, much more...

unit has built in flash,
10x zoom,
digital special effects,
auto / manual focus switch,
auto lighting adjustment,

This is a VERY NICE camera for anyone who needs fast digital photos without the hassle of interface cords, cards, and other forms of downloading the pics to the PC!

Can see some of the shots I've taken with this Camera at:
HTTP://www.mindspring.net/~chainsaw1

I paid $700.00 for the camera new about 5 mos. ago and it's got about 2 hrs of use on it (Like New!)
I will sell it for $500. or I'll trade it for a Icom IC-271a with pre-amp and DC power supply options installed.
Or I will entertain the idea of trading for (4) Cushcraft 13B2 beams with phasing harnesses!

Contact me at:

Gordon West Radio School Presents Classes For:

Technician No-Code
(Fri/Sat/Sun)

And

General 13-wpm Morse Code
With Theory Review
(Sat/Sun)

April 16th, 17th and 18th

No-Code Technician Class - 4/16 (evening), 4/17 and 4/18
==========

Location: West Side Police Sub-Station, Costa Mesa, CA

Have you always been interested in ham radio, but been put off by the Morse code requirement? Well, now you don't have to learn *any* Morse code to get your license! Earn your entry level "Technician No-Code" amateur radio license in one weekend! Use ham radio to stay in touch with fellow hams as you travel across the county, or across the world. Use ham radio phone patches to keep in touch with family and friends when using a regular phone system is inconvenient or impossible. As a ham, you can even help your community's disaster preparedness group by volunteering your communications expertise and equipment!

This fun and entertaining two-and-a-half day class starts on Friday afternoon and covers everything you need to get your Federal Communications Commission No-Code Technician license. Take the two multiple-choice exams right there in class and get your callsign two or three days later! Students who pre-register will receive the Gordon West "No-Code Technician Plus" textbook, theory cassettes, and a special pre-study package. The class fee includes nineteen hours of tuition, beverages, lunch on both days, a barbecue on Saturday night, and a special Saturday night after-class workshop detailing installation and use of ham radio equipment in houses, cars, RVs and even boats. Attend the class, and stand-by for one of the best educational experiences you'll ever have! Oh yes, someone needs to bring a fresh pickle to class! :-)

Students that pre-register for class will receive the exclusive Home Study Package that includes Gordo's book, valuable gift certificates and pre-class homework assignments.

General 13-wpm Morse Code with Theory Review Class - 4/17 and 4/18
==========

Location: West Side Police Sub-Station, Costa Mesa, CA

Are you a terminal tech? Have you tried to pass the General Class code test before on your own? Have you "hit the wall" at 10-WPM and need help over the "plateau"? The General Class code weekend course is your answer to the Technician Class blues! The new "no code" license offers no privileges for worldwide communications. You will need the General class ticket for worldwide voice DX. Gain voice privileges on 10m, 12m, 15m, 17m, 20m, 40m 75m and 160m! Build your code speed up to 5-6-WPM now, then pass the 13-WPM, or even the 20-WPM code test in class on Sunday 17th April! This is the fun and stress-free way to upgrade.

This class is for hams that want to upgrade to the General Class license, but like many people, find the 13wpm Morse Code requirement their biggest stumbling block! Make 1999 your year to upgrade. Don't let the Code hold you back any longer, the Worldwide HF bands are waiting for you. Your instructor will take you from a shaky 5-wpm all the way up to 13-wpm, or higher, in preparation for your exam on Sunday afternoon! Techniques to help you pass the CW exam will be taught, and there will be multiple demonstrations showing just how easy it is for YOU to pass the 13-wpm, or even the 20-wpm code exam! Theory review sessions are held throughout the two days to help make passing the written exam even easier. Students that pre-register will receive the Gordon West "General Class" textbook, Gordo's exclusive CW tapes, and a special pre-study package. The class fee includes sixteen hours of tuition, beverages and lunch on both days and a barbecue on Saturday evening. General Class students join Gordo and his No-Code Technician class for an operating session and workshop dedicated to installing, using and maintaining ham radio equipment.

Only Prerequisite: All students must be able to copy code at 5-WPM prior to coming to class.

Students that preregister for class will receive:

o Home study package consisting of CW tapes, book and
computer software
o Audio tapes for home study
o Sample test preparation exams, just like the real thing
o Multiple code test-passing opportunities

--==--

Both weekend courses include:
o Beverages, snacks and lunches
o Saturday night "Operating Session" with Gordon West
o Multiple live demonstrations
o Multiple examination passing opportunities

For full details on either of the classes described above, please call Gordon West at (714) 549-5000 between 10am and 4pm, Monday through Friday.

Amateur Radio Spectrum Protection Act of 1999 (Introduced in the House)
HR 783 IH

106th CONGRESS

1st Session

H. R. 783

To ensure the availability of spectrum to amateur radio operators.

IN THE HOUSE OF REPRESENTATIVES

February 23, 1999

Mr. BILIRAKIS (for himself and Mr. PALLONE) introduced the following bill; which was referred to the Committee on Commerce

A BILL

To ensure the availability of spectrum to amateur radio operators.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. SHORT TITLE.

This Act may be cited as the `Amateur Radio Spectrum Protection Act of 1999'.

SEC. 2. FINDINGS.

The Congress finds the following:

(1) More than 650,000 radio amateurs in the United States are licensed by the Federal Communications Commission.

(2) Among the basic purposes of the Amateur Radio and Amateur Satellite Services are to provide voluntary, noncommercial radio service, particularly emergency communications.

(3) Emergency communications services by volunteer amateur radio operators have consistently and reliably been provided before, during, and after floods, hurricanes, tornadoes, forest fires, earthquakes, blizzards, train accidents, chemical spills, and other disasters.

(4) The Federal Communications Commission has taken actions which have resulted in the loss of at least 107 MHz of spectrum to radio amateurs.

SEC. 3. FEDERAL POLICY REGARDING REALLOCATION OF AMATEUR RADIO SPECTRUM.

Section 303 of the Communications Act of 1934 is amended by adding at the end the following new subsection:

`(z) Notwithstanding subsection (c), after July 1, 1999--

`(1) make no reallocation of primary allocations of bands of frequencies of the amateur radio and amateur satellite services;

`(2) not diminish the secondary allocations of bands of frequencies to the amateur radio or amateur satellite service; and

`(3) make no additional allocations within such bands of frequencies that would substantially reduce the utility thereof to the amateur radio or amateur satellite service; unless the Commission, at the same time, provides equivalent replacement spectrum to amateur radio and amateur satellite service.'.

Source record: 148897

You are, in fact, misinterpreting the way the Koch Method works. I don't know where you learned about the Koch Method, but your starting point should be:

http://www.ees.nmt.edu/sara/sara/finley.morse.html

Your questions and many others are answered in my book, "Morse Code: Breaking the Barrier," published by MFJ. You can read more about the book at:

http://www.sdc.org/~finley

For the record, the Koch Method is the fastest, most effective Morse training technique ever devised, producing, under laboratory conditions, a level of proficiency in 12-13 hours that other methods required 60-80 hours to produce. In my opinion, however, speed is not necessarily its main advantage. Its principal benefit is that, unlike other techniques, it provides constant positive feedback that helps the self-study student remain motivated and avoid frustration.

Best of luck and 73,

Dave Finley, N1IRZ

5350. Strange Propagation During this Cycle

Newsgroup: rec.radio.amateur.misc
Date: 1999-03-04 00:00:00 UTC
From: wb5agz@dc.cis.okstate.edu
Message-ID: <7bmtkf$kc5$1@sunhub-tulsa.onenet.net>
Source record: 148900

This may be my imagination, but there is something strange
about this Solar cycle, so far. I have lived through 4 previous
cycles except I was too young in the fifties to appreciate that one.
In the cycles I do remember, propagation between 25 MHZ and higher
frequencies was usually incredible during the Winter with the
occasional day or two of dead air just after or during a Solar storm.
Last Fall was like this for the first time in this cycle. In North
Central Oklahoma, I could hear the FM frequencies at the high end of
10 full of perfectly strong signals, sometimes several deep.
Commercial traffic on the VHF low band was audible up to around 35 MHZ
and the bootleg frequencies just above and below the CB channels were
a wash in chaos. The CB channels themselves were 40 peaks of
incredible noise with so many carriers that they all blended together
to make a roar.

What I have noticed since around the first of the year is that
all skip signals are still there, but they seem muted compared with
last Fall. This is definitely not a receiver or antenna problem as I
have two receivers that I can use on 10 meters and each has its own
antenna. Also, the level of local background hash is the same as
always. It just appears that something is happening to the
propagation and I wonder if anybody else has noticed.

The Solar flux from Boulder has touched 200 at least once over
the last couple of months so we should be able to hear the local
oscillators on receivers in Oregon from here, but such is not the
case.:-)

>privileges for worldwide communications. You will need the General
>class ticket for worldwide voice DX.

But...you just told me above how WUNDERFULLL that no-code Technician license
was. Now you're saying it isn't any good and I have to acquire this instead?
Me is confused!

>Gain voice privileges on 10m, 12m,
>15m, 17m, 20m, 40m 75m and 160m! Build your code speed up to 5-6-WPM now,
>then pass the 13-WPM, or even the 20-WPM code test in class on Sunday 17th
>April! This is the fun and stress-free way to upgrade.

Of course the easiest way (and the cheapest) would be to wait a few months
until the CW requirement is lowered to 5WPM across the board. Even the
holdouts in Oldington have signed on now, so it shouldn't be long at all.

>This class is for hams that want to upgrade to the General Class license,
>but like many people, find the 13wpm Morse Code requirement their biggest
>stumbling block! Make 1999 your year to upgrade. Don't let the Code hold
>you back any longer, the Worldwide HF bands are waiting for you.

Yes! Porkbutt, Hanoi Dan, Dumba** Donnie, Oris, Sir Sidney, Walter Barstool,
etc., are all waiting to welcome you with open arms! Enjoy the nightly jamming
contests, profanity, threats, and slander on those WUNDERFULLL "Worldwide HF
bands!"

>Your
>instructor will take you from a shaky 5-wpm all the way up to 13-wpm, or
>higher, in preparation for your exam on Sunday afternoon! Techniques to
>help you pass the CW exam will be taught, and there will be multiple
>demonstrations showing just how easy it is for YOU to pass the 13-wpm, or
>even the 20-wpm code exam! Theory review sessions are held throughout the
>two days to help make passing the written exam even easier. Students that
>pre-register will receive the Gordon West "General Class" textbook,
>Gordo's exclusive CW tapes, and a special pre-study package. The class fee
>includes sixteen hours of tuition, beverages and lunch on both days and a
>barbecue on Saturday evening. General Class students join Gordo and his
>No-Code Technician class for an operating session and workshop dedicated
>to installing, using and maintaining ham radio equipment.

NOW are you going to tell me what all of this costs?

>Only Prerequisite: All students must be able to copy code at 5-WPM prior
> to coming to class.
>
>Students that preregister for class will receive:
>
> o Home study package consisting of CW tapes, book and

> computer software
> o Audio tapes for home study
> o Sample test preparation exams, just like the real thing
> o Multiple code test-passing opportunities

Um...cost? Expense? Fees? How much? Dinero? Lira?

>*Both* weekend courses include:
> o Beverages, snacks and lunches
> o Saturday night "Operating Session" with Gordon West
> o Multiple live demonstrations
> o Multiple examination passing opportunities

How about cheap whiskey (essential for sustained operation on 75 meters.) Is that provided, too?

>For full details on either of the classes described above, please call
>Gordon West at (714) 549-5000 between 10am and 4pm, Monday through Friday.

Cool! Call the long-distance number and MAYBE they'll tell you the cost.
Gosh, darn...where do I sign up?

Ah, I believe I have spotted a great contradiction from He Who Does Not Work
for a Living...

Hanoi Dan, you claim that I am Drew Durigan, correct? Let's take a looksie at
the FCC database, courtesy of our friends at qrz.com:

Callsign: KF4DDM
Name: DREW A DURIGAN
Addr1: 2841 SE 7TH ST
Addr2: OCALA FL 34471
Country: USA
Class: Tech Plus
Effective: 06 Sep 1995
Expires: 06 Sep 2005
Zip Coords: 29.169 N 82.092 W Marion County
Email: mnmaniac@aol.com

You will see, Hanoi Dan, that the licensee above is of Technician Plus class.
That would seem to indicate that he has passed a Morse code test. So my
question to you, Hanoi Dan, is "how can someone who has passed a Morse code
test and been issued an FCC license of the appropriate class be...in your
words, Hanoi Dan...'too lazy to learn the code?"

Please provide your answer in the space below:

The solar flux is only 1 factor and not a meaningful one if the "A"
index is high.This cycle is a sleeper(very poor) compared to the last
2.Check it out for yourself at<http://www.dxlc.com/solar/cyclcomp.html>.

No, FCC won't do anything, they have the evidence all neatly
classified. Disloyal Chairman Bliley at House Commerce Committee
will not investigate Disloyal Chairman Kennard at FCC;
Disloyal Janet Reno will not investigate Disloyal, and
Zionist, Director Freeh at FBI. FCC making a martyr of
me would be a really dumb-assed thing to do. Not only

would it bring the militia out in a blood-rage, but it
would focus attention on an issue that the most cowardly
black man in America is trying to hide. Kennard is one
easily frightened bro', hiding the worst shame in all
of FCC's history.

Expanding the info on CS gas, the breakdown products in
a fire are deadly cyanide radicals binding to hydrogen
from water in the air to form hydrogen cyanide gas,
deadly oxides of nitrogen, and methyl alcohol, also
deadly.

The evidence belies the claims the FBI did not return
fire on April 19, 1993. Autopsy reports give one
comfirmed kill with direct hit to the chest with
a ferret CS round.

The infrared signatures of machine-gun muzzle flashes
recorded by aerial video cameras explains the autopsy
reports of 9 mm bullets fired from behind into the heads
of many victims. While explained as mercy killings
of one Davidian to another, these wounds are better
explained by the scenario of 30 people who fled from
the fire only to be fired at by FBI. Those running
from their executors would be shot in the back of
the head. Other bullet holes were not observable
due to extensive burning. The refrigeration at the
morgue was deliberately turned off to cause rotting
and destruction of the remaining evidence. This killed
any possibility of a second forensic examination.

Damnit, Chuck, just how pathetic can you and your
silly-assed arguments be. You want me to prove that
FBI and FCC were running so much power that the
electromagnetic waves fried the Davidians. No,
DIPWAD, the Davidians died because they were
denied the ability to negotiate with anyone who
would ACTUALLY negotiate. The House Judiciary
and Oversight Committees have found that the
criminal homocidal maniacs of the Hostage
Rescue Team only wanted to kill, not negotiate.
Grow up, Chuck, reality is never going to be
the way some jerk FASCIST idiot wants it to
be, accept your defeat. LIVE WITH IT!!!

I return the discussion to the original topic and
report some of the details at my website,
http://www.atlcom.net/~geozim/index.htm

FCC JAMS HAMS, and
the FCC is a criminal faction of a criminal executive branch,
engaged in a criminal coverup which is further protected by

a criminal Justice Department, also a party to the crime.

The FCC knowingly, intentional, deliberately, willfully and purposefully supplied radio jamming equipment to the FBI and, with reasonable assumption, to the US Air Force for the purpose of jamming AM and FM radio broadcasters, TV broadcasters and the Amateur Radio Service. The amateur station jammed was defined as a Title 47, Code of Federal Regulations, Part 97.405 Station in Distress, relaying emergency communications critical to safety of human life. As a result, appoximately 100 people died.

FCC is also a deliberate violator of the Freedom of Information Act, using an exemption of documents not allowed under the list of exempted documents types. Whereas, I have not posted details on this to the website yet, you can read the 36 descriptions of FOIA requested documents in the FOIA Administrative Appeal letter. All of these are denied on the basis that I have figured out what the nature and content of the documents are, and the FCC does not want to verify my logical, analytical and deductive work that has narrowed down the documents almost to the point of writting them myself. Actually, I already have two of the documents, and stand ready to publish them, as soon as I can arrange to leave the country, and post them from a safe place.

Neither last nor least, but in closing on FCC criminality, FCC is a criminal co-conspirator with FBI to classify documents pertaining to the criminal operations of the FCC and FBI. Such classification of documents for the purpose of avoiding criminal prosecution is specifically described as a criminal violation in any Executive Order pertaining to such classification at the time of classification.

Get the FCC out of the control business, contact your Congressman, ask that he support Henry Hyde of the House Judiciary Committee to convene a hearing into the criminal coverup by FCC Chairman Kennard of the criminal operations of the FCC and FBI and US Air Force engaged in Communications Act violations.

Get the American Radio Relay League out of its tyrannical misrepresentation of the amateur community. Publish the fact that the ARRL board voted not to reveal the criminal operations of the FCC and FBI. What decent person would be a member of such a criminal organization. If you are in the ARRL, moral integrity demands you quit.

> in the United States of America. If it was jamming of Iraq, eastern
> Europe (Yugo.) The its not a violation of any rule. This are hostal
> war areas and all is far in LOVE AND WAR!!

How many people died as a direct result of the Titanic
striking an iceberg? Let me see....uhmmm...zero. Yeh,
thats it! The iceberg had nothing to do with it.
Why, if that iceberg hadn't been there, a total
breakdown of law and order would have resulted, but it
in no way contributed to any fatalities.

I want to see the Congressional Declaration of War on the
Davidians. Surely such must exist. Maybe FCC has it right
next to the other classified documents:
* Duty log showing AM and FM stations to be jammed.
* List of programs too subversive to be broadcast in Texas.
* Names of Air Force personnel who violated Communications Act.
* Names of FCC personnel who violated Communications Act.
* Names of FBI personnel who violated Communications Act.
* Operators Manual for jamming equipment.
* Files on radio traffic of amateur station in church.
* Files on radio amateurs in church.
* Files on all members in Heart of Texas ARC.
* Records of all mail cover operations (FCC addresses)
* Records of FCC mail illegally seized from USPS.
* Orders from President Clinton suspending Communications Act.

The FCC will arrest me after they have machine-gunned to
a bloody ooze the very last kid talking over the very last
Mister Microphone, then declare that a total breakdown
of law, order and public morals would have resulted.
Why...they just had no choice, don't you see. They
had to do it.

Returning the discussion to what the readers really want, I
report some of the details at my website,
http://www.atlcom.net/~geozim/index.htm

FCC JAMS HAM:

What is DAMA? Is that an acronymn? BTW, I plan to connect Linux with this TH-D7x... Here's a posting from Radek OK2JBG about DAMA, still I dunno exactly what DATA is all about:

Subject: DAMA problem - solved ?
From: "Radek Burget" <powershot39@hotmail.com>
Date: 1999/02/17
Message-ID: <fa.gmc80nv.1lgkuq7@ifi.uio.no>
Newsgroups: fa.linux.hams

Hi there,
I studied the kernel sources yesterday and I found this:
The ax25 module is set to the STD_SIMPLEX protocol after initialization.
In this mode no DAMA checking is done. I didn't find any way to change
this mode. So I changed the header file
include/net/ax25.h at line 133 from
#define AX25_DEF_PROTOCOL AX25_PROTO_STD_SIMPLEX
to
#define AX25_DEF_PROTOCOL AX25_PROTO_DAMA_SLAVE
and recompiled.
In this mode ax25 works in both CSMA and DAMA modes and correctly
switches between modes. Is there any way to do this without changing
this file ?

I also found another strange thing in net/ax25/af_ax25.c at line
996. There is #ifdef AX25_CONFIG_DAMA_SLAVE. Is this correct ?
I would expect CONFIG_AX25_DAMA_SLAVE.

73! Radek OK2JBG

Tapes? Good idea. Make your own! That's what I did. I made mine with output
from the PC speaker generated by SuperMorse, on micro-casettes, the ones
that were used in answering machines before they went digital. The recorders
fit nicely in a shirt pocket, so you can listen anywhere, and the best part
is you can make a fresh tape every couple of days, tailored to your problem
areas and learning progress. Don't buy them. Make them!

Have you tried like the manual suggests and only write to the memory channels when in VFO mode not in another menu ? I think you are just not writing the memories correctly . The mmanual does not say you can write to the memories from any old screen you desire to do so from. I suspect this is the trouble, the cpu does not know what to do with a memory write from the wrong location.

And digital stuff, too.

Useful or not, they're still illegal.

Not all of us beep, and not all of us are geriatric.

>>Hell bent on your little personal crusade for chaos and anarchy in the radio
>>spectrum?
>
>Ooooh...did I hit a nerve here?

Actually, if hams were unruly enough they would very easily overrun
the CB frequencies. Since they actually earn licenses, however, they
have something to lose.

Every ham shall feel very, very free to transmit at any legal power
over (once again, do we have to always resort to this?) anyone who's
not supposed to be there.

If you hear a roger beep and voice, there's a pretty good chance that
signal's not supposed to be there.

>
>>You are twisted.....and just plain boring.

I am back and the name is Laura.Well first off I would like to apologize for the
post I sent about a month ago in reference to the fact that I am a waitress
at a local haunt that hams frequent and their lack of tipping .I had just split
up from my husband and things were starting to get to me. This group of hams
would come in every week and occupy my table for quite some time and leave
a minimal tip. I have learned to accept you folks I cant blame my bad day and
take it out on you people I received several e mails from hams complaing about
my statements and for that I am sorry. I never realized how many hams or
amateur radio operators there were in the area. I saw your true colors one
night
when I was leaving work and slipped on the ice in the parking lot of my
workplace
I cant tell you how helpful all you people were that night with your support.
I view you folks alot diffently now and for my past statements I take
everything
back My god forgive me and again I will never forget the night I fell when that
so called Jerk of a person in a hat will letters k blah blah blah came over to
assist
me. Sorry ladies and gentleman..

Hi Jimmy

DAMA is a protocol extension to AX25 and avoids collisions .... the digipeater
is polling your station
after your connect frame and so gives all stations(also low power stations
etc.) a chance .

FLEXNET digipeaters and others using it here in Europe ....

Please have a look on

I want to knoww how 100 people died. It seems to me that if that many people died as a direct resault of Jamming I want to know how! I think you are posting a bunch of lies and if you are posting lies the FCC will put a stop to you. I don't think that the FCC would cause people to die in the United States of America. If it was jamming of Iraq, eastern Europe (Yugo.) The its not a violation of any rule. This are hostal war areas and all is far in LOVE AND WAR!!

> in the United States of America.

Indirectly (or directly), they did. One spoke in the wheel...

The CN part of CS gas is very flammable and CS will cause you to do the funky chicken while you are incapacitated on the floor. Babies and old folks could die. While it was used to get enemy soldiers out of caves in Vietnam, that and a flamethrower, it was banned by the Geneva Convention. Use of military tactics on US civilians is breakig a serious law, yet no one took responsibility. Except Janet "The buck stops here" Reno. That and smashing the escape routes killed those people.

> If it was jamming of Iraq, eastern
> Europe (Yugo.) The its not a violation of any rule. This are hostal

That is a war overseas against the enemy! Not citizens, unless we are considered the enemy and that's my point.

Source record: 148828

I had been around around huge IBM environment before working around
downsized mainframe using Pick OS/RDBMS. My present job still link to the
EDSNET in variety of platforms. As in Pick OS/RDBMS it use internal system
date representation in "integer" where is 1/1/1900=1 and 1/1/2000=36526.
It's up for programmers if to make API showing as 6 or 8 digits. Even the
some PC-based program like Microsoft Excel and Access has adapted integer
as internal date representation. See some Y2K FAQ at
http://unix.cc.wmich.edu/rea/Y2K/FAQ.html.

Some companies now are using PCs to simulate Y2K scenarios because it will
be very stupid to be waiting for any hardware/software glitches than
finding fixes.

There may be problems but IHMO it may not be that widespread.

May be you wanna buy a Kenwood TH-D7A Data Communicator to be used either
as for voice or packet communiation just in case...?

Howdy, Tom. Check out "Now You're Talking!" published by the ARRL, and available at any ham radio store, and also at Rat Shack. Pretty easy material, and it has a lot more than just the test material in it. Lots of hints on how to buy gear, set up your station, operating practices and procedures, etc. By your post and sig, I would guess that you are fairly intelligent. You certainly ought to be up taking the written test a few days after you crack the book. The only benefit I see in you taking a class is in socializing with other hams and wannabe hams, which sure as hell won't hurt.

As for the code, try Nu-Morse. It is a native Windoze program, unlike my personal favorite, SuperMorse which is an older DOS prog. Both are downloadable from many sources, including my website, url in the sig. If you decide to go with SuperMorse and have problems getting it to run, get in touch, because it can be made to run on ANY machine using DOS, Windows, or OS/2 with an 8088 or better processor if you know the tricks.

If you are going for the No-Code Tech license, well, disregard the second paragraph, and welcome aboard anyway.

If you are running split site (which I assume you are?) and
will not be using duplexers to keep the TX out of the RXs..
then you can easily tie the 2 TXs together by using a LP
filter for the 6mtr side with a cutoff of say 70MHz and a HP
filter for 2 with a cutoff of say 140 MHz....the COMET or
DIAMOND diplexers for crossband operation will work just
fine for this...or you CAN easily homebrew...
BTW a DUPLEXER allows you to operate DUPLEX (TX and RX)...a
DIPLEXER allows you to feed multiple TXs into the same feedline.
A CROSSBAND coupler (also called diplexer) allows different
freq band TXs OR RXs to share one feedline......

To move the CB, DONT touch the PLL chip or its xtal....
find the main LO xtal (a 37 or 39 MHz xtal)...change THAT
by how much you want to change Channel 1 (take the lowest
freq you want on 10 then subtract CB Channel 1 at 26.xxx MHz
and ADD that difference to the xtal freq and order one from
ICM or similar....then retune the rig! And youre on 10!

Well the new band switch is in the Clipperton L. Come to find out the band switch in the SB 220 will work as the rear waffer in the clipperton band switch. The only problem is I lose 10 meters in the amp. I need some help on the parasidic cokes. The original chokes had 100 ohm 2 watt carbon resistor in them. Being how I can't get a 100 ohm 2 watt carbon resistor any more if it was ok to parallel 2 1 watt 200 ohm resistors in the place of the 2 watt 100 ohm resistors. After I replace the parasidic chokes on the plates of the 572b's the amp should be back in service less 10 meters.
thanks for reading

I believe the projections for a peak are actually off by two years.
There was a secondary "bottoming out" of the last cycle just 2 years
ago. That means the "peak" won't happen until the middle of 2002.

I don't see any reason that it would not work. The chokes are not very critical. Just try to keep the wire (coil) around them about the same size as the origional.

I am just getting started with amateur radio, and
would like to solicit some opinions from experienced
amateur radio operators out there in cyberspace.

I would like to purchase a handheld FM transceiver that
has a lot a functionality and is powered by AA batteries.
(For example, I looked at a Yaesu VX5R, and while it had
a lot of good features it was powered by a Li-ion
battery).

What recommendations would you offer? What manufacturers
and models have you had success with? Which features
have been particularly useful? Are there any pitfalls
you'd recommend that I should avoid?

Any and all constructive advice is welcome. Thanks
in advance.

Kevin

Watch out! many PLL in CB use the same crystal for the inloop mixer, and
the pll reference, and maybe even the IF. In order to change them, you have
to leave the on board crystal as the reference, then add an outboard
oscilator for the inloop mixer only.

AMATEUR RADIO SPECTRUM PROTECTION ACT OF 1999 INTRODUCED

It's round two in Congress for the Amateur Radio Spectrum Protection Act. At the request of the ARRL, Rep Michael Bilirakis introduced the 1999 version of the proposed legislation, HR 783, on February 23.

The bill is aimed at ensuring the availability of spectrum to Amateur Radio operators. It would protect existing Amateur Radio spectrum against reallocations to or sharing with other services unless the FCC provides "equivalent replacement spectrum" elsewhere. Bilirakis, a Florida

Republican, also sponsored last year's measure, which attracted upwards of 83 cosponsors on both sides of the aisle. Rep Frank Pallone Jr, a New Jersey Democrat, is the initial cosponsor of the 1999 bill.

ARRL Legislative and Public Affairs Manager Steve Mansfield, N1MZA, says the 1999 bill "is largely the same as last year's HR 3572." The major difference is that the 1999 version adds "Amateur Satellite Service" frequencies to "Amateur Radio Service" in detailing the frequencies that would be afforded protection under the act.

Specifically, HR 783 would amend the Communications Act to require the FCC to provide "equivalent replacement spectrum" to Amateur Radio and the Amateur Satellite Service in the event of a reallocation of primary amateur allocations, any reduction in secondary amateur allocations, or "additional allocations within such bands that would substantially reduce the utility thereof" to amateurs.

Mansfield said it's too soon to predict how HR 783 will fare in the new Congress, but said the fact that it has been introduced so early in the session "bodes well for our prospects." He said that a number of the cosponsors from last year already have indicated an interest in signing on again, "so I think we'll have a lot of support."

Mansfield also hopes the bill can take advantage of a desire on the part of the House leadership to move a lot of legislation through this year. "I'm hoping our bill will get caught up in their enthusiasm," he said.

A copy of the measure is available via the Thomas Web site, http://thomas.loc.gov/

BAY AREA REPEATER SHUT DOWN AFTER FCC ORDER

The San Francisco area's K7IJ Grizzly Peak repeater system is off the air in the wake of an FCC shut-down order, and the FCC's amateur radio enforcer Riley Hollingsworth, K4ZDH, says he's been in touch by telephone with the repeater's licensee and owner, Bruce Wachtell of Carson City, Nevada. Citing what it called "an alarming and unacceptable lack of control over the operations of these repeaters," the FCC had notified Wachtell that it was ordering his system shut down for 120 days as of midnight, February 28. The K7IJ system includes repeaters for the 146, 222, and 440 MHz bands.

Wachtell, 64, a shipboard operator on a container vessel, has been at sea in the Pacific and did not receive the FCC's notification. Subsequent efforts to reach him by satellite telephone proved unsuccessful. On March 2, after he had not heard from Wachtell and was unable to contact him, Hollingsworth got the repeater site owner to shut down the four K7IJ machines and lock out access. Hollingsworth said he considered the K7IJ system "a runaway repeater" since the licensee apparently was not in control and was unavailable to the FCC.

Hollingsworth said that while he and Wachtell had a generally fruitful conversation, the repeater will remain shut down, and the FCC still expects Wachtell to respond fully and in writing to FCC inquiries. In his letter to

Wachtell, Hollingsworth requested a reply within 30 days as to "any detailed steps you may propose to take to correct the operational problems with your repeater system and in regard to the control operator."

In the meantime, the FCC continues to look into "actions and omissions" of the individual identified as the K7IJ control operator, Blake B. Jenkins, N6YSA, as well as the conduct of an alleged secondary control operator Steven R. Rossi, KE6LNH. Hollingsworth said the FCC has information indicating that Jenkins "invited unlicensed operators to use the repeater, encouraged jamming, and has otherwise taken no action to control the repeater systems to ensure compliance with our rules."

The K7IJ shutdown has put some repeater operators into a panic, Hollingsworth said. "There is no general cause for alarm," he advised. The only repeater owners who need to be worried are those who fail to maintain control over their repeaters, he said.

In a related move, the FCC also set aside recent license grants or upgrades of four operators while it continues its investigation. The FCC said three of the four--James C. Walker, KF6VAA; Michael J. Nichols, KF6UAS; and Eric B. Shuler, KF6BMG (ex-KF6UJU)--used the K7IJ system before obtaining their amateur licenses. The Commission said it had evidence that the fourth operator, Gordon B. Reese III, KF6QKA, was "engaging in rebroadcasts of cordless telephone calls and other broadcasting, along with profanity & obscenity." The FCC has permitted Reese, who had just upgraded to Tech Plus, to retain his Technician operating privileges for now. Hollingsworth said he's been in touch with all four individuals and will carefully consider their written explanations.

The FCC also issued warnings to Mervyn Ehambrave about alleged unlicensed operation on the K7IJ repeater, and to Timmy O Sheen Sr, N6MZA, about alleged jamming and rebroadcasts of cordless phones.

HAMVENTION ANNOUNCES 1999 AWARD WINNERS

Kenneth M. Miller, K6IR, of Rockville, Maryland, has been named the Dayton Hamvention's 1999 Amateur of the Year. Miller was cited for "leadership, vision and dedication exhibited during his nearly 60 years of continuous involvement in Amateur Radio." Miller says he was very surprised and honored when he got the word from Hamvention Awards chair Cathi Hoskins, N8ZCQ.

First licensed in 1940 as W9NQT, Miller has remained an active amateur and premier Honor Roll DXer. He's a member of the Potomac Valley Radio Club and the National Capital DX Association as well as a Director of the Radio Club of America. Now retired, he once headed Penril Corp, a multimillion dollar international manufacturer of modems and other electronic devices. He also is a former executive with LearJet and Wilcox Electronics.

The Hamvention's Technical Excellence award will go to Alfonso R. Torres, KP4AQI, of Huber Heights, Ohio, recognized for "his numerous designs and inventions that have enhanced the art and science of Amateur Radio operations."

Special Achievement Award winner Paul D. Lieb, KH6HME, of Hilo, Hawaii, was cited for "his pioneering and record-setting work in tropospheric ducting and VHF, UHF and microwave communications." Miller and Lieb are ARRL life members. The award winners were announced March 1. The awards will be presented at the 1999 Dayton Hamvention banquet May 15.--Dayton Hamvention

HAARP TO CONDUCT LISTENING, AMATEUR TESTS

The High Frequency Active Auroral Research Program (HAARP) facility in Alaska, will conduct a second HAARP Listening Test in late March. HAARP also will conduct an Amateur Radio experiment earlier in the month.

HAARP will transmit March 26 0800-0830 UTC and March 27 0700-0730 UTC, seeking reports from hams and SWLs in Alaska and in the "Lower 48." The HAARP facility rarely transmits, but its previous listening test in March 1997 was so successful that it has decided to conduct another one.

The listening test transmissions will be on or about 3.4 MHz and 6.99 MHz. HAARP will send a CW message and request signal strength reports. HAARP's Ed Kennedy, K3NS, points out that the test times are early ones for those on the East Coast, but he says they represent the best chance for listeners in that part of the world to hear HAARP. "They lost out last time due to poor propagation conditions," he said.

The 1999 listening test will begin on the hour on 6.99 MHz with an ID, followed by three four-minute periods of carrier only for signal-strength measurements, then a CW message. A somewhat shorter test will begin at 20 minutes past the hour on 3.39 MHz, with an ID, followed by one four-minute carrier and a CW message. QSLs will be available only for reports mailed to HAARP, PO Box 271, Gakona, AK 99586

HAARP also will conduct what Kennedy calls "a true Amateur Radio experiment" in conjunction with the March research effort. The ham experiment, March 20, 2200-2400 UTC, is being organized by Ed Cole, AL7EB, with cooperation from several participants in Alaska and Canada. As Kennedy explains it, "HAARP will attempt to generate field-aligned irregularities in the F-region over the HAARP facility, and the participants will attempt to establish communication links by scattering VHF signals off the FAI."

Each HAARP transmitter can produce 10 kW of RF output between 2.8 and 10 MHz. For the listening test, HAARP will use all 48 available antenna elements but run transmitters at half power, around 480 kW. During the Amateur Radio test on March 20, HAARP will run full power--960 kW.

HAARP's stated scientific purpose is to study "the properties and behavior of the ionosphere, with particular emphasis on being able to understand and use it to enhance communications and surveillance systems for both civilian and defense purposes." For more information, see "The High Frequency Active Auroral Research Program" (QST, Sep 1996, p 33) or visit the HAARP Web site, http://w3.nrl.navy.mil/haarp.html

WRTC 2000 SITE, SCHEDULE, TEAM ALLOCATIONS SET

The site, schedule, and team allocations have been announced for the next World Radiosport Team Championship. The international Amateur Radio competition will be held in the tourist city of Bled, Slovenia, July 8-9, 2000, concurrent with the IARU HF World Championship event. The 2000 event will be sponsored by The Slovenia Contest Club, which sent a large group of contesters to the last world event, WRTC 96, in the San Francisco Bay area. The top-scoring team from that event--Jeff Steinman, N5TJ (ex-KR0Y) and Dan Street, K1TO--will defend their title in next year's WRTC as one of two special teams.

WRTC 2000 Organizational Committee member Tine Brajnik, S50A, said 15 teams have been allocated to North America--12 US, 2 Canadian, and 1 wild-card. Europe will field 25 teams, including five wild-card teams, while Asia gets six, South America three, and Africa and Oceania one each, both selected as wild cards by the WRTC organizer. As WRTC 2000 organizer, the Slovenia Contest Club will field a second special team for the event.

Branjik said the national team allocations were based upon the number of contest logs that beat respective continent-average scores in different categories. Wild-card teams will be picked from the list of applicants, he said. He invited applications via e-mail to scc@bit.si or via mail to Slovenia Contest Club, Saveljska 50, 1000 Ljubljana, Slovenia.

While the on-air competition will cover only July 8-9, the official WRTC 2000 events schedule begins July 5 with the opening of the contest office and a picnic for competitors and concludes with a closing ceremony, dinner, and awards July 10. For more information, visit the official WRTC 2000 site, http://wrtc2000.bit.si/center.htm

VELCRO TO HOLD FIRST ISS HAM HARDWARE

Velcro will be used to hold initial Amateur Radio gear in place aboard the gravity-free environment of the International Space Station. Since the Russian-built Service Module lacks rack space for amateur equipment, the Amateur Radio on the International Space Station ham gear will be attached to the wall using Velcro. The use of Velcro to keep tools and equipment in place has become widespread over the years on the space shuttles as well as aboard the Russian Mir space station.

ISS Amateur Radio equipment development by ARISS volunteers continues in the wake of January meetings in Houston of most ARISS partners. During the gatherings at NASA's Johnson Space Center, ARISS Hardware Team leader Lou McFadin, W5DID, said initial development of Amateur Radio for the ISS supports the start-small-and-get-bigger approach to Amateur Radio deployment on the ISS recommended by ARISS-Russian's Sergej Sambourov, RV3DR.

Sambourov confirmed that four dual-use antenna feedthroughs have been installed on the Russian ISS Service Module. Plans call for these feedthroughs to support both Amateur Radio operations and ISS proximity video capability during Russian and US spacewalks. Cables have been installed internal to the Service Module to attach the four feedthroughs to the ARISS-coordinated Amateur Radio station.

ARISS Hardware Team members also have agreed on antenna design concepts, including a VHF/UHF antenna for 2 meters and 70 cm, and a flat, spiral antenna that will serve for an amateur radio L and S-band antenna. Yet to be defined is an antenna for HF. Sambourov says the antenna systems would be mounted on handrails near the back of the Service Module during spacewalks. Antennas would be secured using a clothespin-type clamp provided by Energia. The ARISS US and Italian teams will supply the antennas, diplexer, and mounting plate.

The ARISS team will provide training hardware for the equipment to be housed in the Service Module as well as antennas and antenna mockups for EVA training in Russia.

AMATEUR RADIO FORUM SLATED FOR HURRICANE CONFERENCE

A ham radio forum is on the schedule for this year's National Hurricane Conference, March 29 to April 2 at the Omni Rosen Hotel, Orlando, Florida. The forum, "The Role Of Amateur Radio In Hurricane Communications," takes place March 30, from 1 until 5 PM.

"This is a great opportunity for emergency planners and amateur licensees alike to gain a fuller understanding of Amateur Radio in the context of major hurricane disaster planning and operations," said ARRL Field Services Manager Rick Palm, who will be among the presenters. "The programs have been well-received at past conferences."

The program, moderated by conference vice chairman T. Michael Carter, N3PDK, features segments on Amateur Radio operations in support of state and local disaster relief, wide-area Amateur Radio hurricane operations, and a roundtable discussion on the future of Amateur Radio emergency communications.

In addition to Palm, presenters include National Hurricane Center Amateur Radio coordinator John McHugh, KU4GY, and Hurricane Watch Net Manager Jerry Herman, N3BDW.

Discussion topics include an overview of Amateur Radio disaster operations, Amateur Radio operations in the Florida Keys, panhandle, and Caribbean during Hurricane Georges; the role of ARRL Headquarters; the Hurricane Watch Net; National Hurricane Center operations; and National Red Cross Disaster Operations Center Amateur Radio operations.

All hams are welcome at the forum and do not have to register for the conference. For more information, contact Rick Palm, K1CE, k1ce@arrl.org.

1999 YOUNG HAM OF THE YEAR NOMINATIONS OPEN

Nominations are due May 30, 1999, for the Amateur Radio Newsline 1999 Young Ham of the Year (YHOTY). Now in its second decade, the YHOTY award goes each year to a US amateur 18 or younger who has used Amateur Radio to significantly contribute to the benefit of the hobby, to the state of the communications art, to the community or to the nation.

To obtain an official application, send an SASE to 1999 Young Ham of the Year Award, Newsline, 28197 Robin Ave, Santa Clarita, CA 91350. Nomination

applications also are available at http://www.arnewsline.org.

The award presentation is scheduled take place at the 1999 Huntsville Hamfest in August. The 1999 Young Ham of the Year also will spend a week at Spacecamp in Huntsville.

Newsline editor Bill Pasternak, WA6ITF, says the purpose of the YHOTY Award is "to highlight the accomplishments of the nation's many young radio hobbyists, and to encourage the entry of more young people into the exciting and rewarding hobby of Amateur Radio." Corporate sponsors include Yaesu USA and CQ magazine. The 1998 YHOTY was Richard Paczkowski Jr, KF4BIA, of Edgewater, Florida.--Bill Pasternak, WA6ITF

SOLAR UPDATE

Solar solon Tad Cook, K7VVV Seattle, Washington, reports: Average sunspot numbers for the past week were up when compared to the previous week, while average solar flux was down. How could this be? If you look at a graph of the two indices at http://www.dxlc.com/solar/ or http://www.wm7d.net/hamradio/solar/, you can see that a recent minimum followed by a rise in solar flux lagged sunspot numbers. So the minimum solar flux of 115.1 occurred during the past week, while the minimum sunspot number of 38 was during the previous week.

Geomagnetic conditions have been active, with A indices in the double-digits over most of the past week. The worst day was March 1, when the planetary A index was 33 and the K index was four or five for most of the day. This is generally bad for HF, but often provides interesting VHF propagation. N5JHV received television signals from New Zealand, and V73AT was hearing California Highway Patrol around 42 MHz on Monday.

For the ARRL International DX Phone Contest this weekend, look for improving conditions with a rising solar flux of 150, 158 and 165 March 5-7. Geomagnetic conditions should settle down, indicated by a falling planetary A index of 18, 15 and 9 for those same days. The first day of the contest may be a little rough, with geomagnetic conditions possibly unsettled to active.

After the weekend expect the solar flux to peak near 200 around March 13, then drop below 170 five days later, then down to 130 on March 21, and 120 from March 23 until the end of the month. Days with possible unsettled to active geomagnetic conditions are March 10 and 11 and 27 and 28.

Sunspot numbers for February 25 through March 3 were 66, 70, 93, 145, 127, 143 and 148 with a mean of 113.1. The 10.7-cm flux was 119.5, 115.6, 115.1, 123, 120.2, 129.9 and 137, with a mean of 122.9. The estimated planetary A indices were 7, 3, 5, 14, 33, 18 and 15, with a mean of 13.6.

IN BRIEF:

* This weekend on the radio: The ARRL International DX Contest (SSB) is the weekend of March 5-7. See December 1998 QST, page 97, for details. Just

ahead: The QCWA QSO Party, the Missouri QSO Party, the Wisconsin QSO Party, the World Wide Locator Contest, and the RSGB Commonwealth Contest (CW) are March 13-14. The CLARA and Family HF Contest is March 16-17. See March QST, page 96, for details on most of these events.

* Vanity update: The FCC reports it has processed vanity call sign applications received through February 12. On March 4, the FCC granted 99 applications. Another 115 applications landed in the work-in-process (WIPs) stack.--FCC

* Wireless Privacy bill passes House: HR 514, the Wireless Privacy Enhancement Act, passed the US House on a vote of 403 to 3 (with 28 not voting). The bill passed by a similar margin last year, but the Senate never acted on it. But for one line, HR 514 is identical to the amended version of last year's HR 2369. The new line, the product of a floor amendment, clarifies that if one "discloses" protected communication without being aware that it was illegally obtained, one cannot be held culpable under the law. HR 514 was introduced by Rep Heather Wilson of New Mexico. It now goes to the Senate.

* Texas PRB-1 bill reported out of committee: The Texas amateur antennas bill, HB 1345, has jumped through its first hoop, receiving a favorable recommendation March 1 from the Texas House Land and Resource Management Committee. The committee okayed the bill without amendment on a vote of 8 in favor and 1 absent. About a dozen hams turned out for the hearing to support the bill. The measure now goes to the House floor, probably within the month.--thanks to Karl Silverman, N0WWK, Alan Wormser, N5LF, and Tom Blackwell, N5GAR

* E44DX log search: The historic first DXpedition to E4 by W3UR, OH1RY, OH2TA and OH2BH, ended up putting nearly 34,000 contacts in the log during seven days of operation in February from Gaza City, Palestine. QSL E44DX via OH2BN. An online log search now is available at the official E44DX Web site, http://www.n4gn.com/e44dx/. The same log search database also may be searched via e-mail. Send a message to e44dx-log@n4gn.com with your call sign at the beginning of the Subject line. The body of the message should be blank.--thanks to Tim Totten, N4GN

* New Alabama Section Manager: Alabama has a new Section Manager. The appointment of Bill Cleveland, KR4TZ, of Mobile, was announced March 1 by ARRL Field Services Manager Rick Palm, K1CE. Cleveland's appointment is effective immediately. He replaces Scott Johnston, N4YYQ, of Vincent, who resigned. Members may contact Cleveland at bill@taprov.com.

==========

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259. Rodney J. Stafford, W6ROD, President; David Sumner, K1ZZ, Executive Vice President.

Delivery problems (ARRL member direct delivery only!): letter-dlvy@arrl.org
Editorial, Rick Lindquist, N1RL, e-mail elindquist@arrl.org.

Visit ARRLWeb at http://www.arrl.org.

The purpose of The ARRL Letter is to provide essential news of interest to active amateurs promptly and efficiently, and in advance of publication in our official journal, QST. The ARRL Letter strives to be fast, accurate, concise, and readable.

Material from The ARRL Letter may be reproduced in whole or in part in any form, including photoreproduction and electronic databases. Credit must be given to The ARRL Letter and The American Radio Relay League.

==>How to Get The ARRL Letter<==

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ.

To subscribe, unsubscribe or change your address for e-mail delivery: ARRL members first must register on the Members Only Web Site, http://www.arrl.org/members/. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. Registered members may visit the Member Data Page, under "What's available here?" on the Members Only Web Site, to change their selections. Click on "Modify membership data," check or uncheck the appropriate boxes, and click on "Submit modification" to make selections effective. E-mail delivery changes typically are effective immediately. (NOTE: Please do not ask individual HQ staff members to change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

Members Only registration also provides access to The ARRLWeb Extra, a news and feature magazine.

For members and nonmembers alike, The ARRL Letter also is available free of charge from these sources:

* ARRLWeb, http://www.arrl.org/arrlletter/. NOTE: The ARRL Letter will be posted each Friday as soon as possible after publication.

* The Netcom listserver operated by volunteers from the Boston Amateur Radio Club and Mike Ardai, N1IST: Send e-mail to listserv@netcom.com (no subject needed). The body of the message should say "subscribe letter-list" to subscribe or "unsubscribe letter-list" to unsubscribe. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via the Netcom listserver.)

* The ARRL Technical Information Server (InfoServer): Send an e-mail message to info@arrl.org. The subject line should be blank. In the message body, type "send ltrmmdd.txt", where mm represents two digits for the month and dd represents two digits for the day (The ARRL Letter is published Fridays). For example, to request The ARRL Letter file for Friday, November 6, 1998, type "send ltr1106.txt". Then, on a separate line, type "quit". The ARRL Letter should be available via the InfoServer no later than the Monday after the date of publication.

Rambo?......wait a minute,

This pathetic loser plays disc jockey for a living! He plays contemporary music for the general public! This must make him sick to his stomach, portraying that creamy, condescending attitude on the FM airwaves, and not being able to lash out and trash his audience like he does on the news groups.

How many years of college did it take to reach that level? NONE. He is Mr.disc jockey spewing a muzzled version of his ego-centric crap on FM broadcast. He has to be a much kinder-gentler "take-it-in the-butt" sort of guy, both to his boss and to his listening audience. He too, has to bend over to someone elses authority. This does not remind me of Rambo at all.

This guy is in charge of nothing and no one. He cannot demonstrate any self control over his postings. He spews green flem at almost everyone he makes a comment to. Get help before you hurt yourself or someone else.

The twisted anarchist jerk of the news groups.

How about opening the case of your 8500, and looking for the small green wire close to or on the back of the face plate. Cut or desolder it then reset your radio with wide receive option. For a detailed procedure got to www.qrz.com and check out their mods section. The 8500 is listed there along with many others.

"Entitled" is the end of the arguement, Good Buddy. What hams talk about on 10 Meters is not an issue. They have the right to be there and they can discuss anything they want.

Unlicensed operators do NOT have a right to be there, no matter what noble and lofty ideas they discuss.

Why don't YOU explain why you get so uptight every time a ham operator shows up on the CB Newsgroup? It certainly appears that you are afraid they will take over. Balls in your court. Wanna try 'em and see if they can do it? Just sit here getting the hams wired up like you've been doing.

Want to hear something funny. About a year ago, somebody in the NG wrote to participants and suggested that everyone ignore CBRambo for a week to see what he would do. Everyone agreed it would be an interesting experiment.

After four days, he began to ask, "Is this getting through?" At the end of a week, he was chatting with his alternate screen names, just to have something to do.

That's the funny part. Now, here's the sad part. About 2 years ago, Rambo was making very decent posts. Instead of commenting on every little thing (like he does presently), he was helping newcommers and passing along very useful information. People in NG's actually LIKED him back then.

What changed? Who knows......dissatisfaction with the job, mom kicked him out of the house, maybe he got sick and the pain made him a grouch..or his.girl friend dropped him. (I know, I know. Girlfriend?????)

I'll leave that to the psychologists. All most of us know is that we are tired of his usless anti-ham comments. They contribute nothing to the NG, and they don't persuade anyone of anything. We found out a long time ago where he stands on issues. We don't have to hear it over and over. Meanwhile, he's really stretching things to the point of being silly. (For instance, it was obvious that his comments about Part 97 were just bits and pieces of things he has heard or read in Pop 'Com.)

So, he's a troll. We all know it. Paul Larson called it correctly in his quote, above. Rambo can't wait to get in front of the computer every day to log on and see what people have said about him. It's his life.

As an experiment showed, the best thing to do is to ignore him. Yes, it's difficult. Many times I've wanted to hit the keyboard and blast the guy over the stupid things and inaccurate things he posts. Usually, I manage restraint. If I had not killed a bottle of White Zif. tonite, you would not have gotten this. But hey, what's Friday (after work) for??? I was supposed to save that bottle for a party that my lady friend and I are throwing tomorrow night. So, back to the store in the morning and hope they have some left.....

Happy weekend, radio persons. Have many good phone or CW contacts--whichever you prefer!

> thanks for reading
> 73 from Oris
I want to say thanks to all that emailed me with all the good help. I
will have you know the Clipperton L is on the air with its rebuilt band
switch and new parasitic chocks. I went with the 100 ohm 2 watt
resistors ans rewound the coils. All though I didn't know that I could
of use metal oxcide resistors and wound the coils around air. HI HI. I
was sure that the resistor had to carbon. Which left me with the
question if they have to be carbon and people can't get the big carbon
resistors any more what do you do. So that answered that question. I got
a good report on the amp on 3.898 MHz and one on 3.915 MHz. Now to my
next project.
73 and thanks again
Oris
My next project is to redo the final stage of a SB 104. I would like to
use something else besides a NTI 325 (2N6456) They are just to
expensive and getting harder to get. Any ideas??

Interesting reply Yrac.

I do not post much, but this is certainly an eye opener.

Glad you are enjoying the Zif!

In a way, I think you might be saying that there is good in everybody?

But are you also, in any way saying that this Rambo fella' may be just slightly retarded? And therefore, I should cut him some slack and just laugh at his return posts?

I can do that. But he seems to like repeatedly slamming people for no real reason. Should that justify kindness to a retarded person? Maybe a straight-jacket is the answer. Then he would have to use his nose on the keyboard to reply. That would be a bitch!

My initial post was of a serious nature. However, the message is long dissipated into the internet ether. It does not matter. I have already resolved the question about the illegal stink. But this thread has really gotten.....well, amusing and out of hand.

It's great to laugh. I can see that it might be self stimulating (like mental masterbation) to have fun with and toy with other minds on the news groups. This is what seems to get Mr. Anarchy D.J. off.

That in mind, I suppose I am now prepared to avoid this guy.

Maybe he is having a hard time making friends on the net. Are there any disc jockey news groups available to help pump his ego up?

I would think that it would get boring after awhile, only making enemies and creating conflict.

But then his preface is "CB". He makes you think that CB is his lifeblood, and his cause for spewing flem is only Amateur Radio.

Two differing points of view make for good discussion, but Mr. D.J. anarchy does not listen to others.....he just pukes at the slightest mental trigger.

Anyway, this is getting boring to me. It's like examining another terd through the microscope, and trying to make a diagnosis.

Im afraid that might give him fodder.

Touche!

5471. Need Info For Project: Compiling 6m Net List

Newsgroup: rec.radio.amateur.misc
Date: 1999-03-05 00:00:00 UTC
From: "S.M.A.R.C." <N7RCM@POBOX.COM>
Message-ID: <7bqmgl$1bm1@enews3.newsguy.com>
Source record: 148944
Cross-posted to: alt.ham-radio.vhf-uhf,rec.radio.amateur.antenna,rec.radio.amateur.dx,alt.ham-radio.marketplace,rec.radio.amateur.misc,rec.radio.swap

I totally enjoy working six meter. So i'm taking it upon myself to put together the biggest list of 6m nets around, with your help. Whether just in the U.S. or the world. We need more activity on this band. Not because we'll loose it, because no one want's low band anymore, but because of getting the hobby a kick to get up and going.

I don't know about your neck of the woods, but here in Las Vegas there are about 30 or so repeaters, not just on six, but other bands, and there are times when you will not here a single person for hours.

If we had some sort of net going on all the time, not 24hrs now, but in some places the times would be feesable and if you want to get up at 3am local time and work a DX station from Europe or so, you may just catch that great opening.

So, how about some help. I'll post the list, if it turns out to be worth posting, on these amateur newsgroups, some of the reflectors and maybe upload, with permission, on some of the amateur web pages so all can take advantage of it.

You all know that the repeater directory guide book does a fairly good job of listing repeaters, but what about nets and stuff. We'd have to listen 24hrs of so many freqs just to catch a net.

Here's what I'll need. The net name and location, Day or Days held, The time that it's held in UTC format, Frequency (ies), whether in AM, FM, SSB, PL if used, and who the net control operator is.

What I'd also like is the call, if possible, of the machine or who is the owner, club etc.

Thanks all in advance and we'll see where this goes. 73 de N7RCM

> Good luck passing the exam again when your license expires in 2005, >Drew.

Guess you wouldn't make it as an FCC inspector, either. Here...I'll spell it out for you...NO REEXAMINATION IS REQUIRED to renew an amateur radio license. If it was, the HF bands would be nearly deserted. Do you really think Colostomy Bag Charlie and World War Two Warren could pass their exams again at age 85?

My suggestion: end your perverse fixation with myself and THE OYE BOY and get yourself an education. A mind is a terrible thing to waste...even for someone as sick as you who delights in using a silent key's name as his Internet ailias.

When accused of being a troll, Ramboo said that like fools, we keep responding to him. Fair enough. Let him shake, rattle and roll. No matter how outlandish his post, just let it go. It's not worth the hassle.

Be forewarned, however. He will feel threatened; this is his LIFE! The idea of being ignored will be devastating to Ramboo and you can expect every kind of stupid/vile/false response to any attempt to support this movement. Be strong. It may be loud and noisey for a short while, but there's no depth to the cry baby.

Date: 1999-03-06 00:00:00 UTC
From: Michael Willey <photog101@ameritech.net>
Message-ID: <36E1D19E.27A8@ameritech.net>
Source record: 148790

I am looking at an Emperor TS-3010 which has one modification in it at this time (The Tone switch changes the bands). I see that although the frequencies have a 6 digit display, this radio tunes in 10 kc jumps. Is there a modification to shift to either 1kc or .1kc jumps. I would like to do this without unlocking the clarifier.
What other mods can be made to this radio? Is there a good service manual available for this radio?
Thanks in advance to the group:

Is it relatively easy to replace the RAM battery in an HTX-202 2-m talkie?
How do you get to it? Does Radio Shack sell a replacement? Thanks!

5494. Re: Anyone have out of band tx mod for Yaesu FT-8500?

Newsgroup: rec.radio.amateur.misc
Date: 1999-03-06 00:00:00 UTC
From: Mick <noname@nowhere.com>
Message-ID: <7bsuti$9m4$1@remarQ.com>
Source record: 148792
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

By the way...cutting the small green wire also opens up the FT-8000. Cut it, and reset the the radio. It takes longer to re-install the freqs. than it does to make the mod. Having the ADMS-2 program does make it easier to reprogram.
Jarrod Boehme wrote in message ...

Doubt that you will find a HT powered solely by alkalines. What you may be looking for instead is a HT with a selection of battery packs.

If you do not want the newest with all sorts of bells and whistles, see if you can locate a good used Yaesu FT-470. It is an older HT but I have two of them and they are indestructible. Easy to operate; the pushbuttons are fairly intuitive. Dual-band, 40 memories per band, hi and low power, up to 5 watts, depending on battery pack.

You can get the standard NiCad battery pack that will give you 2-plus watts out; high capacity NiCad battery with 2 watts out but twice the life of the standard; or, can get a high-powered battery pack. And, you can get a battery case that holds AA cells.

If you want something a little more new, I also have a Yaesu FT-51R and am very pleased with it. It is a smaller FT-470 with a few more features and lots more memory. It is programmable off your computer with the ADMS-1 software and has a similar selection of battery packs -- low power, low power long life, high power, AA case.

Stay away from the Yaesu FT-50. I had one and could never figure out the buttons -- too damn many functions.

5497. How to - Cable to portable stereo??

Newsgroup: rec.radio.amateur.misc
Date: 1999-03-06 00:00:00 UTC
From: Greg <gregk*SPAM-B-GONE*@powersurfr.com>
Message-ID: <7bt7b1$a6j2@dagger.videotron.ab.ca>
Source record: 148795

Hi, I would like to get cable stereo on my portable stereo that does not have a cable input. Currently I have a wire attached to the inside wire of the coax coming out of my wall. This is attached to an alligator clip which I clip onto the antenna. I have purchased a coax connector and have drilled a hole in the case for it. The connector has a male side that accepts normal cable and the otherside has two solder points. I was going to connect it to where the antenna wires go to the pc board but the antenna only uses one wire???. How would I connect my cable to get better quality sound than I do now? Do I need a 75 ohm transformer in there somewhere?

Thanks in advance, Greg.

>>impossible to interfere with an unauthorized transmission" (FCC's words).

>Nope. Jeffy's words.

As much as you wish it's not true, that *is* the FCC's opinion, and it's
very easy for you to confirm - call them or just send them an email query.

>I have yet to see the FCC post here on the matter. "Where's that big 'ol
>CB RAMBO??"
> "I wanna hear him TALK TO
> UGH!!"

For the seven years I've been here I have never seen the FCC post a
regulatory interpretation to this NG. And just because they choose
not to post such a decision does not make it false. For example, that
you've never seen the FCC post the following here certainly does not
make it untrue:

97.1 Basis and purpose.
The rules and regulations in this Part are designed to provide an amateur
radio service having a fundamental purpose as expressed in the following
principles:
(a) Recognition and enhancement of the value of the amateur service to the
public as a voluntary noncommercial communication service, particularly with
respect to providing emergency communications.
(b) Continuation and extension of the amateur's proven ability to contribute
to the advancement of the radio art.
(c) Encouragement and improvement of the amateur service through rules which
provide for advancing skills in both the communications and technical phases
of the art.
(d) Expansion of the existing reservoir within the amateur radio service of
trained operators, technicians, and electronics experts.
(e) Continuation and extension of the amateur's unique ability to enhance
international goodwill.

>"Where's that big 'ol CB RAMBO??" "I wanna hear him TALK TO
> UGH!!"

"Period"? That's not true:
One-way code practice transmissions target both licensed and *unlicensed*
persons. Phone patches are usually conducted between a licensed operator
and an *unlicensed* person. While I was working at Coast Guard Radio
Honolulu we'd ocassionally have to fire up one of our marine band
transmitters on 20m to communicate with a distressed vessel; *unlicensed*
Coast Guard operators would converse with licensed hams on these vessels.
All perfectly legal.

Welcome to the Auxiliary Communications Service Newsletter, developed by the ACS Training Unit of the State of California Governor's Office of Emergency Services. Please visit our ACS Home Page at http://acs.oes.ca.gov

The purpose of this weekly newsletter is to bring those of us in emergency communications closer together by sharing common ideas, and by introducing new technology into the emergency services community. All individuals with an interest in emergency communications, disaster preparedness or helping the community at large are encouraged to participate here in an open forum.

You will find a virtual community here, with representatives from many different organizations with the same common goal: emergency response. We encourage everyone, from whatever organization you represent (or just yourself!) to bring us your ideas, suggestions, concerns, manuals, handbooks, or opinions so that we may share them with the group. To those of you who have just joined us, welcome aboard!

Current Events:

OHIO HAMS HELP SEARCH FOR MISSING GIRL

Hams in Ohio's Miami Valley helped to search for a nine-year-old girl reported missing February 7. Erica Nicole Baker of Kettering failed to return home after walking the family dog near the Kettering Recreation Complex. The dog was found--still wearing its leash--about three hours later.

The youngster's parents are separated. Erica's father had dropped her off at her mother's home the afternoon of February 7. She was last seen in the park wearing a pink raincoat, a Winnie the Pooh sweatshirt, and blue jeans. An official search, which included search dogs and involved dragging, then draining, a pond near the park complex, turned up empty-handed.

The Dayton Amateur Radio Association van, the Warren County Mounted Search Team, and RACES were called in to aid with the search February 11. Hams from Warren, Greene, Montgomery, Clark, and Darke counties aided police, fire, and search teams by providing communication in the field and maintaining posts around the search perimeter.

The search was expanded to cover a 150-square-mile area around the rec complex. Miami Valley Urban Search and Rescue Team asked the DARA van to return February 12 to serve as command post support at the Germantown Dam Reserve. A decision also was made to use HF and packet instead of the well-monitored VHF and UHF repeaters, to minimize eavesdropping. Among those assisting was ARRL Great Lakes Director Dave Coons, WT8W.

As of February 25, Erica remained missing, according to Kettering Police. Her disappearance has been the subject of episodes on America's Most Wanted. Anyone having information on the missing girl is asked to call the Kettering Police, 937-296-2570.--Bev Priest, N8VZV (The ARRL Letter)

This week's EMCOMM Bulletin:

EMC173 A lesson in Preparedness
To: Emergency Communications Units - Information Bulletin
To: Emergency Management Agencies via Internet and Radio
By: Auxiliary Communications Service (ACS) of the
California Governor's Office of Emergency Services

EMC173 A Lesson in Preparedness Release 3/1/99

A Lesson in Disasteer Preparedness
(original article by Bruce Miller, KC7IAY)*

"I learned something important during the fall l995 floods
here in western Washington. After confirming the need to help
filling sandbags, I headed north from Seattle at about midnight.
On the way, I thought, 'Maybe I should stop and get a gallon of
water.' But I didn't; I couldn't imagine a work station not
having drinking water.
After a couple of hours of physical labor, I got thirsty.
I found cases of soda pop in a (local) building. There was
also coffee, which I don't drink, but no drinking water. In
desperation, I grabbed a can of soda and went back to filling
sandbags.
An hour later, a Red Cross van arrived. 'They'll have
water,' I thought. Wrong. They had coffee and hot chocolate,
but no drinking water. I took a cup of hot water for the
chocolate and sipped on that. But that was too slow to replace
the fluid I'd lost hefting 40-pound sandbags.
Then I got hungry. I went back to the (local) building,
where I found plenty of food - mostly meat. I'm a vegetarian.
The lunches the Red Cross van dropped off were cold cuts on
white bread with corn chips. With lots of salt to make me
thirstier, that's not my idea of nutrition for hard work. So
I had hot chocolate.
Around 6 a.m. I headed into a nearby town where a massive
effort was underway to build a second wall to keep the Sagit
River out of the business district. After two hours of work
by hundreds of people, fluids ran short. I informed -the- net
control and a Red Cross van eventually appeared with drinking
water. But hot coffee for those with cold feet from wading in
the flood waters came later.
I'm not promoting vegetarianism. My point is that before
you go to help in an emergency, make sure you bring provisions
for your particular needs -- water, food, medicine, whatever.
It's not enough to be self-sufficient in radios and batteries.

It you don't provide for your own needs, you may not be able
to work effectively on behalf of others at the site.
In his book, 'Your Body's Cries for Water', (Global Health
Solutions) F Batmanghelidj, MD, explains why soda, coffee and
similar drinks can't substitute for water, and how _most people_
don't drink enough plain water to maintain good health, even
under normal conditions. I learned my lesson. I now carry at
least one gallon of drinking water in my car at all times, in
addition to backup batteries for the handheld radios."

After a couple of hours of physical labor, I got thirsty.
I found cases of soda pop in a (local) building. There was
also coffee, which I don't drink, but no drinking water. In
desperation, I grabbed a can of soda and went back to filling
sandbags.
An hour later, a Red Cross van arrived. 'They'll have
water,' I thought. Wrong. They had coffee and hot chocolate,
but no drinking water. I took a cup of hot water for the
chocolate and sipped on that. But that was too slow to replace
the fluid I'd lost hefting 40-pound sandbags.
Then I got hungry. I went back to the (local) building,
where I found plenty of food - mostly meat. I'm a vegetarian.
The lunches the Red Cross van dropped off were cold cuts on
white bread with corn chips. With lots of salt to make me
thirstier, that's not my idea of nutrition for hard work. So
I had hot chocolate.
Around 6 a.m. I headed into a nearby town where a massive
effort was underway to build a second wall to keep the Sagit
River out of the business district. After two hours of work
by hundreds of people, fluids ran short. I informed -the- net
control and a Red Cross van eventually appeared with drinking
water. But hot coffee for those with cold feet from wading in
the flood waters came later.
I'm not promoting vegetarianism. My point is that before
you go to help in an emergency, make sure you bring provisions

for your particular needs -- water, food, medicine, whatever.
It's not enough to be self-sufficient in radios and batteries.
It you don't provide for your own needs, you may not be able
to work effectively on behalf of others at the site.
In his book, 'Your Body's Cries for Water', (Global Health
Solutions) F Batmanghelidj, MD, explains why soda, coffee and
similar drinks can't substitute for water, and how _most people_
don't drink enough plain water to maintain good health, even
under normal conditions. I learned my lesson. I now carry at
least one gallon of drinking water in my car at all times, in
addition to backup batteries for the handheld radios."

Sure, but in an emergency no liscense is needed to use any means of
communication legally. And I do not consider a one way code practise
xmission a communication per se. But I do get annoyed at those who use
any ham freq. in any way that is against the law. Especially unliscensed
CB'ers. I was one once. It was worth the work to get my extra.

5508. Re: Programming info on a uPD861C PLL

Newsgroup: rec.radio.amateur.misc
Date: 1999-03-06 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <7bqibu$fag@news.Hawaii.Edu>
Source record: 148955
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.homebrew

John and Chris: This rig has two xtals in the PLL stage - 10.240 and 10.695 MHz. Also, a cross reference says that the uPD861 is almost identical to the 858, if that helps. I would have thought that adjusting programming of the PLL via its ten programming leads would have been a better approach.

Thanks for your help, guys. Got to get on 10m CW ACAP (as cheaply as possible).
Jeff WH6U

5510. Re: PorkButt - Cancer to Ham Radio!!!

Newsgroup: rec.radio.amateur.misc
Date: 1999-03-06 00:00:00 UTC
From: Mick <noname@nowhere.com>
Message-ID: <7bqn65ijo1@remarQ.com>
Source record: 148957

The racial fiasco instigated by this Ham have no bearing on his alleged bad checks. This also holds true of his accusers who have had alleged run-ins with the law themselves.
This recent spate of racial commentary was shameful to say the least, and there were many who heard it. I am sure that his claims that it was done "as a joke" are weak after the fact reactions, and as one who listened to it I was very ashamed for his crass stupidity. He made a very great effort to belittle the the Ham operator who may or may not have been a black American. This display of crass ignorance and effrontry is hardly excuseable as having been "a joke". This sort of "white eliteism" has no place on the Ham bands and should not be tolerated by fellow Hams. His was a very shameful display indeed. He owes a great many opologies which will likely never be forthcoming.

>>>One-way transmissions are permitted? Not the last time I checked Part 97.

More inaccurate legal advice from Drew "CBCRYBABY" Durigan, the man who spins '70's MOR music for a living. If Drew were a lawyer, he probably would have been expelled from the American Bar Association by now.
Chances are Drew hasn't read Part 97 since he got his ticket in '95, as he's always attacking amateur radio and bragging about how he's sold all his ham gear to buy a new computer in this and other newsgroups.
Good luck passing the exam again when your license expires in 2005, Drew. Based on your negative attitude towards the amateur radio hobby, you'll need it. Of course, you could always move (or be forced to relocate because of job loss . . . heh, heh, heh) to one of the 35+ states which don't require one to have an amateur license in order to operate a scanner in a motor vehicle, and then you'd be able to avoid the HORRENDOUS task of having to study Part 97 again.

5517. NSS- Annapolis

Newsgroup: rec.radio.amateur.misc
Date: 1999-03-06 00:00:00 UTC
From: donlewis79@hotmail.com
Message-ID: <DWbE2.1012$Ku1.1002417@newse3.tampabay.rr.com>
Source record: 148964

March 4, 1999 filename: nss0304.txt

Merle Parton,

In case you don't know the latest developments at NSS,
let me update you.

NSS was decommissioned in early 1996. The sole remaining
facility employee is John Schorpp, the antenna man.

The towers and transmitter building are scheduled to be
demolished by September 1999. There has been an
appropriation of $4.2 million to demolish the site and
convert it to a wildlife preserve.

There is a group of people, including John Schorpp, and
now me, who learned of this development only this past
weekend, that want to stop the demolition and convert
the site to a museum of VLF radio technology.

As a member of the Antique Wireless Association, I wrote
a letter to its president last night, citing the few facts I
know, and asking what it might be able to do to aid this
venture to convert to a museum. The AWA operates a
large communications museum in Bloomfield, NY, just
south of Rochester NY. It has ties with the Smithsonian
Institution.

There is a public hearing in Annapolis March 8, 1999. The
time is 6:00 p.m. of the Lowe Office Building. That's all
the address I have. I have handwritten directions to it that
John Schorpp handed out at a hamfest we attended this
past weekend.

John Schorpp has asked me to ask you to consider putting
a notice of this meeting on the NSS Web page. I know
this is short notice, and there isn't even a complete address,
but let me give you my name and phone number: Pete
Sypher, 301-601-2711. I'm going to the meeting. I'm going
to spend time and effort for this cause of converting the
site to a museum, even though the chances of this being
realized are slim, in my estimation.

73, let me know what you think about all this.

Pete Sypher

I am glad you have come to accept "us", but I for one would like to say to the group that you serve "Don't be cheap"! If you have a group like that and they take up seating for 10 then they should pay you at least $2.00 apiece for every hour they sit. I personally pay 20%+ on food purchases, and 100% for coffee.

The kind treatment that you receive should not be a trade off for your tips.

Also, being a waitress is not the worst job in the world, being a roofer takes that honor.

Best wishes
Brent

I have one of these radios and I like it a lot. However, because of the wide front end, it tends to get swamped due to cell phones and pagers if you are in the vicinity of one of the towers. I have resolved this with an amp with a built in filter. I know of others who have purchased a notch filter to remove the troublesome signals. I agree with the other person who responded if you can get the software and the cable up front. The programming is much easier on the PC.

You need only 15 mins. of practice per day. Concentrate on the whole character and stop trying to count dots. If you have to slow down, slow down. also practice your sending with a straight key or elec. if you prefer. I really isn't difficult to learn, the hard part is learning to concentrate.

I went from 5 to 20 wpm in a 2 weeks with just 15 min. per day.

let me know how its going.

If the extra 5 feet is enough, line-of-sight-wise, just to
clear a very nearby obstruction it would make a lot of
difference in that direction.

As it is only 5 feet above the ground, even without any
obstructions, a gain of 3 to 6 dB could be expected at very
low angles. It depends on type of ground and how much
low-angle power is lost in it at present.

> is irrelevant. But if it takes an act of congress to get a timely refill, a
> buck from the whole table ought to be sufficient. Ordinary service is
> included in the price.

Nonsense in this case. What you are describing is not "ordinary service". If you want to come in with a bunch of other folks, and occupy space/require constant attention & service for "several hours", then book a meeting room or "back room" which many restaurants have available for groups. Of course, this may require some sort of minimum charge, etc. which could be a problem for hams.

> Superior service merits a GENEROUS tip,

I would agree.

5530. Top of line 2 meter 440 and 6 meter Suggestions Needed

To all out here good day.
My wife as an anniversery gift want to by me some new amateur equipment for my new vehicle. She said she has no cap on spending How about that I wish she would say the same for my boat That doesnt happen LOL
I need some anwers. What would be the ideal setup to run 2 meter 220 440 and 6 meters in the new vehicle Should I go with a tribander or a few separate radios. Someone had mentioned the Kenwood tribander I believe the 742A. Now should I buy a separtate to meter rig in addition to a tribander I could
use some good advice I have no HF privelages so the FT 100 and the 706 should maybe be ruled out But my question is if it were you what would you be purchasing and from where How is the reputation these days at HRO
I will await some replies
Many thanks in advance

5531. How to jam a news group HEY DAN DA MAN

Your short answer is yes. This is a distance to "line of sight" problem to compensate for the curvature of the earth. As you probably know, VHF/UHF signals travel as far as they can see in a straight line similar to light beam (at least in theory). The following formula does not take into account for topographically challenged (hilly) areas or locations than contain obstructions. Ok, here we go:

Distance = 1.4 x the square root of the height difference (the amount you raised your antenna),

If the difference in antenna height is 5 feet,

The square root of 5 feet is 2.24,

2.24 x the multiplier of 1.4 = 3.13,

So, raising your antenna 5 feet will give you approximately 3.1 miles of additional "Line of Sight".

3.1 miles is a pretty substantial amount considering it might make the difference between keying up a repeater or not key up the repeater.

I hope this helps,

73's

I sent an e-mail to a friend in Northern Virginia asking if he had heard anything about EEB. Here is his response:

QUOTE

Hi Joe,
Yes it true and I don't know if you were aware but EEB went chapter 7 last year. Here is something I got a couple of weeks ago, don't remember just where :

Subject: EEB Saga!

A 67-year-old owner of a now-defunct government electronics equipment contractor in Vienna has been sentenced to four months in jail and four months of home detention for conspiring to submit false invoices to the Drug Enforcement Administration in 1995.

Richard Fleet Robinson, who owned Electronic Equipment Bank, also was ordered by Judge Leonie M. Brinkema to pay $52,100 in fines and restitution.

Robinson pleaded guilty in December to one count of conspiracy to submit false invoices to DEA in August 1995. The sentencing occurred Friday.

Robinson conspired with Robert Burchell, a telecommunications specialist at DEA's Northern Virginia headquarters, federal authorities said in documents filed in U.S. District Court in Alexandria.

Robinson was indicted on charges he submitted two bogus invoices totaling $50,000 to DEA for batteries used in DEA radios when, in fact, no such batteries were delivered, court documents state.

After Robinson received payment for the nonexistent batteries and kept an estimated $12,000 for his efforts, authorities said in the court documents, Burchell instructed him to pay the rest of the money to third parties.

Authorities said the third party payments actually were for Burchell's personal benefit. In October, Burchell was sentenced to 4 years in prison.

END QUOTE

i am really sad to hear this. I did business with EEB for years and they always shot straight with me. Guess things got too cutthroat.

FYI:

Subj: Announcement of Team USA Formation
Date: Sat, Mar 6, 1999 3:00 AM EDT
From: Homingin@aol.com
Sender: owner-fox-list@majordomo.netcom.com
To: fox-list@majordomo.netcom.com

Join Team USA for the ARDF Regional Championships
Applications now being accepted

Preparations are in full swing for the biggest radio-orienteering event in the Western Hemisphere. Never before have hams in so many countries made plans to compete in a foxhunt on US soil. The first International Amateur Radio Union (IARU) Region 2 ARDF Championships will be part of the sixth biennial Friendship Radiosports Games (FRG-99) in Portland, Oregon. This event is sponsored by the Friendship Amateur Radio Society (FARS).

If you are selected for Team USA 1999, you will vie for medals against foxtailers from Canada, eastern Russia, and Japan. Other countries that are likely to send teams include Bulgaria, France, Norway, Sweden, western Russia, Moldova and Ukraine. There will be practice and training events on August 9 and 10, followed by the official two meter and 80 meter competitions on the next two days. The closing banquet will be August 13.

You don't have to be an athlete or a marathoner. It's true that some gold medalists in the last World Championships bagged five fox transmitters in 45 minutes on a 8 kilometer course (about a 9 minute-per-mile pace). But that's the exception, not the rule. The median times (half faster, half slower) for the two-meter hunt at the last World Championships ranged from 75 to 95 minutes in the five age/gender divisions. Nineteen minutes per mile sounds much easier, doesn't it? It's often possible to briskly walk the course and still finish in plenty of time, if you are efficient at RDF. You can do that, can't you?

Don't put off registering, even if you're not yet sure if you will be able to attend. Depending on response, it may be necessary to hold a qualifying event or find another way to allocate the limited number of available slots. There is an application form for Team USA at my Web site:

http://members.aol.com/homingin/

Don't omit the forward slash at the end. Download the form, fill it out, and send it in to me via e-mail [homingin@aol.com]. Make paper copies of the form to hand out at your local foxhunts. Completed paper copies can be mailed to my postal box listed below. Hams not on the Internet can send a self-addressed stamped envelope to me, and I'll send back a form to fill out and mail.

Whether you are an expert foxhunter, a weekend jogger, an orienteering fan, or just want to see foxtailers in action, plan to be in Portland during the second week of August. Want to know more about the rules and suitable equipment? The Web site above has information on that, too, plus a link to the FARS Web site. You can also read about what it's like to attend an ARDF Championship event in the March issue of CQ VHF Magazine.

To compete for a country other than the USA, contact your country's ARDF Coordinator or national society headquarters. ARDF Coordinator for the Canadian national society (Radio Amateurs of Canada) is Perry Creighton VE7WWP. His e-mail address is ve7wwp@rac.ca

Don't leave out your family. Most ARDF Team USA members will be Amateur Radio Operators, but a ham ticket is not mandatory. Let others in your family try out your ARDF equipment as you practice. Maybe they will decide to join in the fun. Tell your local orienteering club about it, too.

See you in Portland!

Dan,

Yes, mine does the same. But as I wrote, I'd like to get it up to around 160 or

so if possible to listen to other things when I travel. The IC-28 expands up to

about 174Mhz. I'd like to do the same if possible.
It doesn't even have to transmit up there, I just want to listen.

Bob

I understand it's a simple matter of unsoldering the old and soldering in the new. Haven't done it myself yet.

73,
Tom

The term negro is derived from the spanish word
which translates to the english black.

A nigger is a worthless low life no account individual.Most blacks do not fit this discription many whites do.The town I live in is full of niggers and not one black person lives here.My home town is about 50% black. A man is to be judged by his character not by pigmentation.

The first clue is the drunken brain dead responce to life. An inability to live without a chemical crutch to fog over the sence of total worthlessness and uselessness.This is a usual indicator that someone has submarined there way to new lows. The drinking man is a pitiful shell of a human being. A weakling without back bone or morality.

For an example of these depraved traits just tune in to 3894.5.

Hear it for yourself, racism, facism,drunken ramblings, every nigh!

BUT NOT FOR LONG!!!!!

SB DX @ WW $OPDX.399
Ohio/Penn DX Bulletin No. 399

The Ohio/Penn DX PacketCluster
DX Bulletin No. 399
BID: $OPDX.399
March 8, 1999
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, WB2RAJ/WB2YQH & The 59(9) DXReport, W3UR & The Daily DX, K7BV, W8AEF, KE9KD & DX-Central, W9ZT, DJ5AV & DX News Letter, DL7VRO, EI6HB, G4BUE & DX News Sheet, HA0HW, IK3ZAW, IK0AZG, JA1HGY, OK2AP, ON6DP, OZ6ACD, PA1AW, PP8EB, SM7NAS, UA0CW, VK4AAR, VK6APK and XE1HBU for the following DX information.

5A22PA UPDATE. Veronica, IK3ZAW, informs OPDX that since the announcement of the 5A22PA operation she has been receiving a lot of E-mails asking whether she is Abu Baker's (5A1A) QSL Manager or not. Please understand that she will be the QSL Manager for the 5A22PA special event station ONLY (NOT 5A1A)! This special callsign has been issued to celebrate the 22nd anniversary of "The 1st Born Jamahiriya in History", and the suffix "PA" stands for "People Authority". QSL 5A22PA "ONLY" to: Veronica Della Dora, Piazza Fiume 14, 30126 Lido di Venezia-VE, Italy.

9H, MALTA. The "DX News Sheet reports that Andy, G4ZVJ, will be active this week as 9H3ZV (March 9-16th). His activity will include an entry in the RSGB Commonwealth Contest. QSL via home call.

C9, MOZAMBIQUE. The "DX News Sheet reports that Per, LA7FAA, is active as C91CV from Quipaco Island (NO IOTA Number). They state that he was spotted on 10 meters SSB (February 28th), his length of stay is not known. No QSNs have been reported on the Ohio/Penn Network. QSL via home call.

DXCC ACCEPTANCE OF ZL9CI. Ken Holdom, ZL2HU, Group Organizer/Team Leader/ QSL Manager of the Kermadec DX Association Campbell Island DXpedition, announced that the ARRL DXCC Desk has accepted the ZL9CI Campbell Island - January 1999 DXpedition for DXCC purposes. Ken also mentions that they are currently awaiting the printed cards from Japan and will post progressive updates in the near future.

E4, PALESTINE. Ayar, OZ6ACD, now active as E44/OZ6ACD, has informed OPDX that he will be active from the Headquaraters of the "Temporary International Presence in Hebron" (TIPH) in the West Bank. Apparently, Ayar is the first licensed station to operate with the E4 prefix from the West Bank.
This leaves the question of the E41/OK1DTP's legitimacy (mentioned in last week's bulletin). Some reports state that the Deputy Minister of the MPT (in Gaza) has no record of this station. Probably the most interesting thing is that operator David Lunak, OK1DTP, has put up a Web page at: http://okdxc.cz/e41/
The Web site contains a log search. As always, work first worry later. You never know what will happen.
Anyway, Ayar, E44/OZ6ACD, has receieved equipment from the Martti/OH2BH E44DX group and the JA1UT/E4 group. This equipment will be left behind for the newly established amateur radio group called the "Palestine Amateur Wireless Society (PAWS)" at the College of Technology in Gaza. E44/OZ6ACD will be active almost every day after 1400z, and on each Sunday morning until 0800z. However, he will be QRT between March 17-26th. Activity will be on all HF bands 80-10 meters. 160 meters is still uncertain, but 6 meters will be used frequently. Suggested frequencies are:
SSB (+/-QRM) - 3794, 7044, 14244, 18144, 21244, 24944 and 28444 kHz
CW (+/-QRM) - 3504, 7004, 10104, 14004, 18074, 21004, 24894 and 28004

CW activity will be limited, but OZ5IPA (as mentioned in last week's bulletin) will provide more CW activity when he arrives to be active from the same QTH (March 10-15th). QSL for E44/OZ6ACD should be sent to his QSL Manager OZ1ACB via the bureau or direct to: Allis Anderson, Kagsaavej 34, DK-2730 Herlev, Denmark. Ayar also mentions to please check the following Web site for the latest info and for QSO search: http://www.tiph.org/e44/search.htm

"The Daily DX" reports another operator is headed to E4-land. Peter, G3WQU, has submitted his paper work for a license to operate from Bethlehem, West Bank. He hopes to be active soon as E44/G3WQU.

E44/HA1AG WRAP-UP. Zoli/HA1AG, Gyula/HA1TJ, Laci/HA3NU and Anti/HA3OV are all back in Hungary without any problem. They are all in good spirits but are very tired. In less than 9 days with 4 operators, each operating 12 hours day in front a radio, they made 40500 QSOs. The only problems they had during the operation was with the hotel's phone and TV systems, but the staff was very tolerant! Look for more info to be forthcoming from Zoli soon!

EA8, CANARY ISLANDS. By the time you read this Holger, DL7AU, should be active from Fuerteventura for about 4 weeks. His callsign was not mentioned, but he will be active mainly on RTTY. He will also be active in the CQWW WPX Contest as a 10 meters single band entry. QSL via DL7VRO.

FT5X, KERGUELEN ISLAND. The "DX News Letter" reports that Helios, F6IHY, shall be once again on the air as FT5XN starting sometime this month.

IOTA NEWS.....
OC-136. Alan, VK8AV, is currently on a DXpedition to Phillip Island

and signinng VK8AV/3 until mid-March. He wants to work CW 30 kHz up from the band edges on 10, 12, 15, 17, 20, 30, 40 meters, but when things are slow he will work on SSB on the IOTA, DX and popular net frequencies. His QSL Manager will be Alan, VK4AAR, who will also be able to confirm other QSOs with VK8AV if needed. Please QSL DIRECT with SAE + postage to:
Alan Roocroft, VK4AAR, POB 421, Gatton 4343, Australia

OC-141. Stuart, VK8NSB, has announced that he will be going to Groote Eylandt from April 3-18th. He will use the callsign VK8NSB/P and will be operating a HF IOTA Station on 80/15/10 meters CW/SSB. QSL via VK9NS.

OC-170. Beginning 0400z Sunday, March 14th through 0000z Sunday, March 21st, a group of operators from VK6-land will be active from Woody Island. A team of 12 operators have finalized all their traveling plans and have received permission to operate from the island. The group will hopefully use the callsign VI6EWI. This is yet to be confirmed. The group will work all bands, 80-70cm, both SSB and CW from 4 HF and 3 VHF/UHF stations. They will be staying as close as possible to the recognised IOTA frequencies. QSL Manager for this expedition is Neil Penfold VK6NE. His address is "OK" in all callbooks and Internet callsign databases. Bureau cards will also be accepted.

JW, SVALBARD. Kjell, SM7NAS, will be active from Longyearbyen as JW/SM7NAS from April 2-8th. Activity will be on all HF bands, CW, SSB and RTTY using 1kW to a 5 element beam for 10, 15 and 20 meters 100 ft up, a delta loop on 40 meters and an inverted L for the other bands. The JW/SM7NAS log will be available soon after the operation at:
http://home.bip.net/kjell_adolf
QSL via the bureau or direct to: Kjell Adolfsson, Svensbackevagen 6D, SE-59096 Overum, Sweden

KG4, GUANTANAMO BAY (Update/Change). The following group of operators will be active March 18-25th and during the BARTG RTTY CONTEST (March 20-21st) as KG4GC and not KG4WB as reported earlier. Operators will be Bill/W4WX (KG4GC), William/N2WB (KG4WB) and Vance/N5VL (KG4VL). They will be on all bands before and after the contest using thier own calls. QSL KG4GC to W4WX and all others to the homecalls.

OH0/OJ0, ALAND ISLAND AND MARKET REEF. Dennis Motschenbacher, K7BV, Editor for the National Contest Journal, will be going to Aland Island to operate the new OH0Z super station in the CQ WPX CW Contest at the invitation of station owners Ari/OH1EH, Jukka/OH2MAM, and OH1JT. Look for OH0/K7BV to be used before and after the contest. Dennis states that there is a very high probability that his DXpedition will include a 3 to 4 day OJ0/K7BV operation from Market Reef thanks to a generous invitation from Seppo/OH1VR and Lars/OH0RJ who control the operations of the beacon on the reef. OH1VR will accompany him to the reef and then operate in the CQ WPX CW contest after Dennis's departure by helicopter to get back to OH0Z in time for the

same contest.
K7BV's DXpedition will occur between May 23rd and June 3rd. CW will be the preferred mode of operation on all HF bands including WARC band opportunities. Also, look for RS12 satellite activity (he will be on the air as frequently as possible). If a small transceiver can be borrowed, 6 meters will definitely get some attention. Carl, K9LA, will provide Dennis with extensive propagation forecasting support to insure the efficient use of the lower bands. Unfortunately, short hours of darkness, six in May in the northern latitudes, will severely limit opportunities to satisfy the need for these countries on 80 and 160 meters.
George K5KG (E-mail: GeorgeK5KG@aol) will perform Pilot Station duties and daily feed constructive input from the DX community to K7BV via HF skeds.
QSL Infomation: OH0 - OJ0/K7BV via KU9C and OH0Z via OH1EH, Ari Korhonen, Kreetalank. 9 As 1, FIN-29200 Harjavalta, Finland

PACIFIC TRIP CONTINUES (T30/T31/T33). The OK DX Foundation members Jarda/OK1RD, Jiri/OK1RI and Slavek/OK1TN continue to be active as T30RD from Tarawa until March 10th. At that time, they will be active as T31RD from Canton or as T33RD from Banaba Island until March 28th. They will then return to Tarawa and be active again as T30RD until April 8th. Their operations include two stations on 160-10 meters CW/SSB. QSLs via OKDXF, Box 73, CZ-29306 Mlada Boleslav, Bradlec, Czech Republic.

PY0. FERNANDO DE NORONHA. Look for Peter, PY5CC, to become active again March 21-29th, as PY0FF. Activity will be on all bands with special attention paid to 6 meters. QSL via JA1VOK.

QSL INFO AND NEWS.....
HC8L QSLS. OPDX has been receiving several messages asking where to QSL this station. The operator states to QSL via the bureau. Your editor has tried to find "the HC8 address" , but with no luck. I guess one could use the "ARRL Outgoing Bureau" and hope that someone will pick up the cards at the HC Ecuador Bureau. Reports indicate that the operator is Dave, W6NL (ex-W6QHS). The only thing we can suggest is to wait and see if something (address) comes out after this past weekend's contest.

IR0MFP. This special event station, whose suffix stands "Millennium For Peace", was active during last weekend's ARRL SSB Contest and has the QSL Manager of IK0AZG.

All the logs from the "OK DXpedition Pacific99" will be online very soon. Currently only the logs for 3D2TN have been entered.
Check the Web sites: http://www.okdxc.cz/pacific99

GOOD NEWS. The XZ1N cards have been coming out. Watch your mail box!

EJ7M. Several stations have asked about the QSL info for EJ7M which was active from Bere Island last July. The QSL Manager is Denis, EI6HB. QSL via the CBA or via the IRTS Bureau.

Vlad, UA0CW, operated in the ARRL SSB Contest this past weekend on 15 meters. Please QSL ONLY to W3HNK!!!

S0, WESTERN SAHARA. Arseli, EA2JG, states beginning March 31st, he will be here for two weeks as S09A. Activity will be on all bands. QSL via EA2JG, Arseli Etxeguren, Barrena 6, 01480 Luyando Alava, Spain.

T8, PALAU. Five members of Far East DX-Ploiters (FEDXP), JA1BRK, JA1HGY, JA1HYF, 7N3AWE and JK1OPL, will be activated from Belau Republic as a DX-Vacation operation. Activity will be from March 19-21st, with two separated stations operating on 160-6 meters CW/SSB/RTTY. They will concentrate on the WARC bands. Look for the following (station/QSL route): T88AJ (7N3AWE), T88HY (JA1HYF), T88HG (JA1HGY), T88?? (JK1OPL), and T88RK (JA1BRK). The main RTTY operator will be T88AJ (7N3AWE).

TL5A NOW QRT. Alex, PA1AW, reports that Alex, TL5A, has put 74000 QSOs in the log, and together with his TL0R operation this makes over 80000 QSOs from the Central African Republic. During a short stop in PA-land on route to a new assignment, Alex will get the full logs from Alex, TL5A/ PA3DZN, to update the Web log search pages at: http://www.qsl.net/tl5a This will probably be sometime this week. QSL via PA1AW (ex-PA3DMH).

TP50, FRANCE. Paul, ON6DP, states he will be active with ON7RN as TP50CE from the special event station celebrating the Council of Europe's 50th year anniversary, April 30th to May 2nd. QSL via F6FQK.

V3, BELIZE. Bert, PA3GIO, plans to be active as V31GI from a few Belize IOTAs. Look for him March 14-19th from Southwest Caye (Glovers Reef NA-180), March 21-26th from Blackbird Caye (Turneffe Islands NA-123) and March 28th through April 3rd from Little Water Caye (NA-180). Activity will be on SSB 20-10 meters on the usual IOTA frequencies, 40 meters and the WARC bands. Bert will be using a TS-50 with 100 watts and dipole. Check out his great and colorful Web site at: http://www.xs4all.nl/~pa3gio/ca/
QSL via home callsign (bureau is preferred).

WEB SITE FOR DXERS. The Northeast Wisconsin DX Association has a new Web page at: http://www.execpc.com/~w9zt

XF4MX, REVILLAGIGEDO UPDATE. Parcival, XE1HBU, from Guadalajara, Mexico, informs us that the current XF4MX operation from the archipielago Revillagigedo Island (active until March 15th) now has a Web page up for specific information about frecuency, modes,... etc at:
http://www.radionet.udg.mx/xf4mx/index.html

ZY, ANAVILHANAS ARCHIPELAGO. The world's largest archipelago (in a river) will be activated by operators PP8EB, PP8DA, PP8HDA, PP8KB, PP8BV and PP8JM, April 1-4th. The callsign to be used is ZY8A. Activity will be on 80/40/20/17/15/12/10/6 meters CW/SSB. This will be the first time this archipelago will be aired. This is not a IOTA but is good towards the Brazilian Award. QSL Manager is PP8KB, Luiz Ricardo, P.O. Box 691. Manaus Am, Brasil 69011-970.

Hello,

My name is Joe Humberger KB9TFH, I am going to be purchacing an Icom W32a in a couple weeks. The reason for posting this message is that i was woundering if there are some things i should know about this radio, The Pro's and the Con's. A friend recomended this radio so i know very little about it. I would appreaciate any info given. And if you have this radio, Please tell me what u like and don't like about this radio.

Thanks,
Joe Humberger KB9TFH

The debate is teling. Those who try to pick apart petty things do so because they do not have a valid primis.

All the terms in the title are discriptive of one who as less than the full acess to his caranial facilities.Crazy,dumb ass ect.

The shame of it is these individuals became such be soaking their brains in alchohol for decades thus the mental disablility is self inflicted. Too bad that this pitiful shell of humanity has to demonstrate the brain damage on amateur radio.

A true poster boy for the offending group might be a desheveled wino and a sign. A mind is a terrble thing to waste.

Ol Sarge KA9DHZ

It's not that simple, "Rosie." With a KF in place, it takes an
enormous amount of time to load the news folder, for each and
every article of each and every newsgroup (news.hawaii.edu carries
all of 'em) has to pass through the filter before one can read
anything.

I have one of these radios and am very happy with it. It's easy to use. The entire keypad can light up and the display is easy to read, so it can double as a mobile radio very nicely. That's what I did. I use it in my car attached to a Maha docking amp. My only regret is that I didn't get the programming software when I bought the radio. 200 memories is a lot to keep track of.

If you plan to use the crossband repeat feature, don't run both bands at high power. The radio will get REAL hot. If I'm crossbanding from 440 to 2M I only have the 2M side on high if I need to, and the radio still gets extremely warm.

I would suggest that you write a program that will just send, in a random fashion, e i s h 5, and include that in your daily practice. Run the character speed at say, 20 WPM, with a (not too) comfortable space between letters.

Remember to break up your study periods into small 5 to 10 minute chunks throughout the day. I believe that's better than one long daily session.

GL!

Hello BLAKE BOWERS!

I see that you are forging messages again!

Notice that I had been ignoring your pompus & immature messages
which are nothing more than pathetic attempts at FLAMING & drawing
attention to yourself that you so desperately desire. So when I
stopped responding to you, you then started to forge messages like
the one from Steve Barker in support of you. Notice how NO ONE
posted ANY messages supporting you in your recent tirade or
causing trouble on usenet, so you invented Steve Barker from
a dejanews account! But you forgot one thing Blake, Dejanews
tracks the IP address of the computer used when loggin in!

The message, IP address, & originating location for each are below!

Now Blake, SERIOUSLY, how stupid did you think the citizens of USENET would be to NOT see thru your games & forgeries???

Don't try to deny it Blake. While you were at least smart enough to hang up your modem & dial in again to most likely get a different IP before posting again, the proof is EASY to see! How many users are in your LITTLE, SMALL, MISSOURI town using the SAME ISP as YOU & posting on the SAME newsgroup as YOU & would use their ONE & ONLY USENET POST to agree with YOU when NO ONE ELSE WILL?!?!?!?!?!?!?!?!?!??!?!

Of course, despite the many complaints your ISP has received from MANY unhappy individuals
your antics continue. Perhaps complaints about you will have go up stream to your ISP's
provider of Kelly Consultants or UUNET!

For a refresher of memory, Blake was caught doing this same thing only a few weeks ago At that time he forgot to dial in to get a different IP! If anyone wants to see that let me know & I will post it.

5569. K5BLB's License To Jam

Newsgroup: rec.radio.amateur.misc
Date: 1999-03-07 00:00:00 UTC
From: antenna42@aol.com
Message-ID: <19990307184445.04737.00002125@ng54.aol.com>
Source record: 148765

On Thursday night, 3/4, K5BLB and KK7HO jammed a QSO on 3950 for a half hour. K5BLB said he was justified in jamming the QSO because someone in the QSO was talking about him and had mentioned his call letters. K5BLB even implied that the FCC has given him the go-ahead to do this!

On Saturday night, 3/6, K5BLB, WA9KJI, KK7HO, K1GKM, K5MVK, and others, spent OVER 6 HOURS talking about, critisizing, and mentioning the call letters of, other amateur radio operators. As a matter of fact, almost every time K5BLB,
WA9KJI, KK7HO, et al, get on the air, they spend most of their time talking about
and critisizing other amateur radio operators. Yet, those who they critisize never
turn around and jam them! Do I detect a hint of hypocrisy and inequality here?

Since we all know that K5BLB is the most respected amateur radio operator in the world, and that he ALWAYS operates his station in the most impeccable legal manner possible, we can only conclude that K5BLB is correct about every amateur radio operator having the LEGAL RIGHT, and indeed the DUTY, to jam anyone who talks about or mentions their call letters. Besides, K5BLB said that the FCC approves of this type of jamming.

Therefore, any amateur radio operator who hears WA9KJI, K5BLB, KK7HO, K5MVK, K1GKM, et al, talking about them or mentioning their call letters,
should immediately and mercilessly JAM their QSO. After all, K5BLB said that it's perfectly legal to do so. And, gee, if K5BLB said it, it MUST be true!

"Where's that toothless fat-ass New Mexico faggot?"
"I wanna hear him talk tough!"

In a literal sense yes but not a practicle sense no. You cannot for example use a humam hair to wire a circuit with. It might however, in a very high voltage situation, provide a path of electrical discharge.

Dear Bill,

>>>>I doubt there's millions of operators these days.<<<<

Judging by the number of Wilson, K40 and "Penatrator" style antennas I see in the Chattanooga area alone, I think that over a million active CBers could be fairly accurate.

There may not be as many CBers, but a lot of the one's I see in this area are spending money on quality equipment and accessories.

I have a AEA/TimeWave DSP 232 all mode controller. I have the intermittent problem of the Kenwood 231A locking into the transmit mode when on a packet cluster. It has only happened twice but the rig almost overheated. I shut off the 232 and it comes out of transmit and then operates fine for days. I was told it might be a ground loop. Has anyone ever had any problem like this.

"Most" of the repeaters out here do not have the problems you mention above, in fact, very few do... especially those where there is a high number of Gordon West students using the repeater. Those that attend his classes know full well that they certainly aren't "cram sessions", for a start, there's lots of work that has to be completed before even attending the class.

As for that "Jerk", I wonder what he ever did to you to make you so angry?

Maybe the fact that he is an excellent teacher, a consummate ham, polite, considerate and *volunteers* (that means "for free") an extraordinary amount of his time and equipment to ham clubs, disaster preparedness groups, the Red Cross, the City of Costa Mesa, and the Coast Guard Auxiliary (to name just a few) puts YOU in a bad light because you are probably unwilling, or incapable of doing the same?

>>

Dear Julian,

If the circumstances you state are factual, then there has been a DRASTIC change in the demographics of the repeaters, and ESPECIALLY those who "graduated" from West's 3-day wonder classses.

And as for volunteering, etc, I spent many an hour with the Orange County Red Cross during many of the numerous fires while I was stationed there, and was an officer of Squadron 88 of the Civil Air Patrol, California Wing. I proctered several VE exams while there and taught several too.

I am presently the only "Elmer" in the county that I reside in in TN, am STILL a VE, and I am the ARRL EC for TWO counties. I am an officer for the Tennessee State Guard, an all volunteer, unpaid service to the State of Tennessee. Now, you were saying about what I "don't" do?!

I also had NUMEROUS run-in's with people who would initiate QSO's in the middle of ones already in progress, activate the autopatch for non-emergent traffic under the same circumstances, ignore stations calling BREAK BREAK BREAK with urgent or emergent traffic, or tell them to "QSY" and have them "rationalize it with "But Gordon said.....". One was a prominent Costa Mesan who put up a "remote base" with a 300 watt "downlink" on a very active local simplex frequency that he would use to monitor his HF station while he mobiled around town for hours. It was nothing but a cross-band repeater to which he was selling "memberships" to other prominent CM's for a healthy chunk of change. Another "Gordon West" trained operator.

Do we see a trend here?

Granted, I've not been in California for 7 years now, and a lot can change in those years...but I doubt it. Congratulations if it has. It was embarrassing.

73

Steve, K4YZ

(editorial continued)

Perhaps the circumstances I quoted HAVE changed, and I certainly hope so. It was a travesty to see so many fine repeaters trashed by these poorly trained persons who were led to believe that they have "carte blanche" since they paid Gordo for the privilege of a license. Many of these people were of the frame of mind that as long as they could afford to buy the radio equipment, they could do as they damned well pleased with it, and anyone else be damned. And unfortunately they were all "Gordo" graduates. Not something I would be too proud of.

John and Chris,
Here's the latest update. The 861 uses six pins for binary-coded decimal programming, but there is an option to use eight pins. That would give 2^8 - 1 channels spaced 10 kHz apart which would give me a 2.55 MHz frequency span* beginning at Channel One - that would easily get the radio above 28.000 MHz. I tabulated the hi/lo voltages on the programming pins for each channel/frequency which enabled me to determine the BCD frequency scheme. I'll bring the eight leads out to an eight-pin DIP switch which I'll mount on the front panel. I'll have to get proficient at base-two counting to determine the frequency of operation!

The RF stages will need to be aligned - no problem there.

So now I'll have a "new" 10m CW rig for free (other than a few hours of head-scratching and soldering).

Moral of the story: No need to change the crystal in the PLL stage.

73, Jeff WH6U

* Some of the channels have greater than 10 kHz spacing, so the 2.55 MHz range is a conservative figure.

For just coffee, if I sit there for a couple of hours, and if I never see the bottom of my cup, I always leave a couple of bucks and encourage everybody else to do likewise. The fact that the coffee was only fifty cents is irrelevant. But if it takes an act of congress to get a timely refill, a buck from the whole table ought to be sufficient. Ordinary service is included in the price. Superior service merits a GENEROUS tip, and the amount of the tip should not have anything to do with the amount of the check. just my off-topic opinion.

Given what coverage you say you currently have, I'd say your improvement (and
although there will be improvement) will be minuscule.

From an overall standpoint, you will probably not notice the
difference. The rule of thumb is, "double the antenna height (above
average terrain) = quadruple the power". This would come out roughly to
one additional "S" unit on a calibrated "S" meter.

The thing to keep in mind though at the frequencies you mentioned
(especially UHF), moving an antenna 6" could move your signal into a
null, or out of a null. Its entirely possible you could move your
antenna where it is shadowed from where it was before. Or, you could
move it where you can access new repeaters. Works both ways.

We Hams don't always modify our radios to transmit illegally. Perhaps I am a member of a volunteer emergency service who uses vhf and uhf frequencies for radio communications. Seems silly to have 2 ht's and 2 mobiles if you can use 1 ht and 1 mobile. Also, reprogramming commercial is expensive, tuning an amateur is painless...

It just means that the Cenrtral and South American wholesalers
as well as USA domestic Militia groups will buy from other
communications equipment dealers at Dayton this year.
My best sale last year was to an oil co in C.A. who bought FIFTY
Yaesu HT's w all accessories. Why pay for commercial stuff
from Motorola when you can get ham HT's, easily modified, for
60% less cost? See U at Dayton!

i'm looking for simple (and free) logging software. contesting capabilities are not needed; network connections are not needed; rig control is not needed..... it would be nice if it was able to access the (reformatted?) file downloaded from the FCC and would be nice if it was based on a ".DBF" file.

i will probably participate (on 10-meters) in some contests, but i doubt that i'll actually submit anything for scoring. however, i probably will use it for our club's novice/tech station at field day and we 'should' submit scoring data for that...

it's mostly to keep track of contacts so i can responsibly respond to qsl card requests even though i don't plan on buying the cards themselves...

Dana,

I recommend you stay away from rec.radio.amateur.misc and rec.radio.amateur.policy, unless you enjoy them for their entertainment value (You can make this determination by answering the question "Did you enjoy the movie One Flew Over The Cuckoo's Nest?"). For actual amateur radio info and questions exchanged among actual amateurs, try the other rec.radio.amateur news groups, especially rec.radio.amateur.boatanchors for the questions you mention.

73,

Marv

OK, go look at 27 MHz and report back. Outlawing Jamming would be a "law"
and thus "anti-libertarian."

>> You can turn Ham radio into a big internet and telephone company, but it
>> will cost just as much as if you just paid for what is available now.
>
>I don't want to turn it into a company at all. I want it to be a
>deregulated resource

Well, let me advise you what you really want. You want to use the public
property for your own use. Well, suppose someone put up a tar-paper
shack on the right-of-way in front of your home. Then started selling
Tacos.
Hey, he could sell Tacos in a properly zoned area you say! Well, no, this
is public property and he is a libertarian, and believes in less laws means
good laws. Zoning is unfair.

5617. Liberty net QRMs 3 QSOs on 3 different frequencies

Newsgroup: rec.radio.amateur.misc
Date: 1999-03-08 00:00:00 UTC
From: frequencycaptain@my-dejanews.com
Message-ID: <7bv4ubqko1@nnrp1.dejanews.com>
Source record: 148671

On 3-6-99 t 10pm Eastern time the liberty net with w1wcr as net control moved onto 3947.5 while there was a QSO going on on 3947. Along with this they were only two and a half kHz away from two other QSOs and were causing interference. One on 3950 and the other on 3945. Both of these had been going on for hours prior to this group just plowing in and creating malicious QRM. The QSO that was on 3947 left because of the interference. The group on 3945 went to 3947.5 and told w1wcr there was a QSO on 3945 and that his group on 3947.5 was causing interference. W1wcr's arrogant response was that there must be something wrong with everyone's receiver on that frequency and that they were not going to move. W1wcr and the other participants in that so called net exhibited the most arrogant, non-compomising, pomous attitude that I have ever heard on the ham bands. This gang seems to think that no matter where they are that others should "bow down" to them and their QRMing. One other thing that is indicative f their attitude is that they ignored the QRM that they created and started calling the ones on 3945 "jammers". They (liberty net0 claimed that the only reason that any of them were saying anything was because they didn't like the political and racial topics. How ridiculous, had they not created the interference the group on 45 would not have even known they were there at all. Well surprise most hams don't like their discussions but that doesn't give them the right to QRM the whole damn band. I went to 3950 and listened and the interference was just as bad but, I would imagine because of the problems with that liberty net group in the past no one told them about the interference problem. Boy what a strange arrogant group. Something should be done about this inconsiderate QRMing gang of racists.

Sounds like the rantings of a Great Liberty NitWitNaziNetter. Of course Sid has a license to jam. It was personally delivered to him by The Commander In Chief of 3950. Now on to larger issues. Like what the Great Liberty NitWitNaziNet did last night on 3947.5. If that wasn't jamming, you tell us lowly SWL-ers what is. Overall it was a good night. It appears that "His Royal Highness Highness, King Victor"smoked his amp while trying to plow through the qso that was in progress just a little below 47.5.

Where is that big ol' Great Liberty NitWitNaziNet?

I wanna hear them whine tough.

Hi all,
I picked up an Ericsson Orion Vhf rig and need software to program it
Anyone can help ?

thanks
Jerry

> Actually, my ISP covers a scad of towns across the area. Many users,
> with hundreds of lines. Your post shows nothing.

Wrong again Blake Acording to the web site for YOUR ISP they
only cover 3 towns, all small towns in Missouri. On their web site
(www.townsqr.com) they state as follows:

"Providing complete and local phone call Internet Services in
Missouri for West Plains, Mountain View, Willow Springs, and the
surrounding area"

> Lies again Johnny. Aren't you ashamed of yourself? My ISP has only
> gotten complaints from you, or your forged names.

No Blake, I do NOT forge. All the complaints you mention that have been
received regharding your poor behavior are from real people, not me.
It is YOU & Bud that have been CAUGHT FORGING in the past, NOT me!

You on the
> other hand, have been kicked off multiple ISP's, which has been
> proven.

Then post your proof Blake, you won't be able to because I haven't beenb
EVER kicked off of an ISP!

More lies. Recorded the whole thing and forwared the QRM'ing of the Liberty Net to Riley myself.

Question: If everyone KNOWS there is a net at 10 PM Eastern time on 3.950 MHz, why do they park themselves on that frequency before hand? We all know the answer. It's not as if strangers occupied the frequency. The motive is to stop the Liberty Net.

I say hire Ashton Hardy as attorney for the Lib Net and forge ahead on 3.950 MHz at 10 PM every Saturday night! (Unless a "stranger" is on frequency.....)

Hi:

I have a problem with my TS-140S, it's working fine and then suddenly the display goes crazy, nothing is displayed or the wrong digits are displayed or it shows all characters at a time and stops responding to the front panel controls, I just turn the radio off and on and the readio works fine again for a while, can be minutes can be hours, any ideas?

Please respond to my email address: jramirez@inteli.net.mx or jramirezcemex.com

Best regards and thanks for your help

BD,

I just had this discussion with my code buddy. He was having the exact same problem, so I'll share my same thoughts with you. Learning numbers in Morse Code is the same as learning the letters. They must be learned as whole sounds. Six, for instance DAHdidididit doesn't sound anything like Two, DidiDAHDAHDAH. One of the best ways to learn to instantly recognize these letters (and they are just letters) is to practice for instant recognition starting with two letters at about 5-8 wpm. Once you can recognize them instantly at 90%, then add a letter. Increase your speed about 2 wpm at a time as you begin to feel confident (which means 90% recognition at speed). Learn the numbers in this order 0 5 9 3 8 4 2 7 1 6. How long it takes will depend on you. But shouldn't take any longer than a week (if you practice 30 minutes a day split into two 15 minute sessions). I know it sounds weird, but it works. The other method that will work is get into a slow traffic handling net (like MSN maryland Slow Net at 3717 daily, at 730pm EST.) They will train you to handle traffic AND get your speed up. Traffic handlers work with numbers ALL the time, so you will get a lot of of practice copying them. Good luck BD, and Arf (bark of the traffic hound)

Yes, get the software and cable. I purchased the software and cable with
the radio and made it much easier to program all of those memories, offset,
PL tones and etc.

Hello
I am now starting to work on my next project. I have a Heathkit SB 104
HF rig. It is in really nice shape. The final stage in this rig is shot.
The 2N6556 transistors are 149 bucs for a match set at Neb surplus. I
think that is to much money when MRF 455 at 30 bucs for a set. MRF 455
are 60 watt pills and the 2N6556 are 50 wat pills. Now after all that
dose anyone know about redoing the final of this old Heathkit.

Dear John and Miranda,

I once was the not-so-proud owner of such a receiver,
and I can tell you: It sucks. I had to use a ATF1-
notch filter in order to receive 2m without interference.
Also you can hear a mirror of the FM-broadcasting band
between 65 and 85 MHz, very strong. Don't buy!!!
Just some advise from YOUR King.

I say that your as ridiculous as the rest. You seem to think (and i know that's hard for you) that because someone, or some group, wants to lay claim to a certain frequency, at a certain time, that everyone should stay off? Is that what your trying to say. That's already been settled - no one has exclusive rights to any frequency - it's a first come basis ol' man!

I bought one last month and am very happy with it. The PL scan function
was a nice bonus since I travel a lot and don't always have my repeater
directory with me.
I'm thinking about getting the HM-75A microphone since I have trouble
hearing. Can anyone comment on the audio quality/level of this mic?

Colin Caulkins tries again, saying:

>
>Where did I ever say that people hadn't answered my questions? Hmm?
>
>

Re-read your post. It implied that you were not being allowed to seek information in this NG because you are not licensed. I said that is not true. You asked about or suggested specific behavior and a number of folks gave you specific answers. They did so in a polite manner, and did their best to be friendly and helpful.

>
>Oh, brilliant move, this. First you accuse me of taking something out of
>context, then you quote something completely unrelated that I posted on
>another newsgroup, taking it *totally* out of context.
>

Thank you. I was feeling a little smug about that one, myself. Here's why. You took something from this NG out of context and started making an issue out of it. However, in other NG's that you frequent, you are strongly opposed to taking something out of context. Should we conclude that it's okay if you do it, but not okay if OTHERS do it to YOUR posts?

By the way, I gave the full reference to the posting which I quoted. On the remote chance someone is interested, they can go back and read the complete message and thread to see if I, indeed, took this out of context (as you accuse me of doing).

>Nice try, but no
>cigar, Monica.
>

That's cool. I don't smoke. How about a cup of coffee sometime? I think I'd enjoy it. From researching your posts, I discovered that when not playing "hurt puppy", you have some stimulating ideas.

Hi Miles,

Here's a cut & paste I posted here a while back to the exact same question.
Hope it helps!
****
It appears to be a fairly straight forward "open 'er up, unsolder the
old, solder in the new" type deal. Looking at the service manual I have
here, that Lithium batt is listed as "bat1001 3V". The parts list reads:
"BAT1001 - Battery, Lithium, 3V 3.8X15mm - Mfr.'s Part No.420-564-3". No
corresponding RS part number is listed. By the by - the service manual
is RS part #19-1120. You should be able to order it RSU or from most any
of the RS retail stores.

Hope that helps a bit - good luck!

>>with more than 3 dots 'in a row' all sound the same to me!!!
>>I can NOT tell the difference between S, H, or 5 (I'm stuck on those, so
>the...

use Ham U's morse exercises thing instead of the morse lessons for a while.
fill in the edit box with a whole mess of S's, H's, and 5's, along with
whatever other characters to throw yourself off a little. i had a similar
problem with Q, Y, L, and X, and this helped. Practice as much as possible,
but don't get frustrated. i usually can go only 15 min. or so before i start
getting bad copy. take a break for some freecell or minesweeper or whatever,
then get back to the morse. i usually total about an hour a day.
nearly all the numbers sound like a letter at higher speeds (1=J, 4=V, 5=H,
6=B, etc.), so you may still have to rely on context of the message, but hamU
sends random characters :(once you know them all, do some QSO's and you'll
know that character was supposed to be an S rather than a 5.

best of luck!

5680. Re: Drew Durigan: Village idiot

Newsgroup: rec.radio.amateur.misc
Date: 1999-03-09 00:00:00 UTC
From: Colin Caulkins <caulkins@user2.teleport.com>
Message-ID: <CseF2.14695$hC.7471923@news1.teleport.com>
Source record: 148584

Assuming he's recounted the story accurately, it sounds to me like Drew has a legitimate complaint, though probably not grounds for a law suit. If anyone was stirring up trouble, it was the school officials who were seeing a threat where none existed. I see adults walking around the track in my local elementary school playground all the time, and apparently no one has a problem with it. According to Drew, he was only walking through the parking lot. I am sick to death of hearing about school administrators who enact policies lacking in common sense, then behave as if their hands are tied because "it's the policy." When kids are being suspended for taking pink, plastic squirt guns to school, or for singing "I hate you, you hate me," you know there's a tremendous paucity of common sense in the public school system. Someone needs to bring these people to account for why they deserve their taxpayer-paid salaries.

Mark, (RQZ)

>>>>If you are speaking of High Speed systems like HSCW, tlaked in QST sometime last year. It ought to farily high given the fact that it is likely tranmitted at a speed known only to the sender and receiever, and could also use the basic digital encription methods.<<<

While you are correct about the "basic encryption systems", all a potential foe would have to do is record the transmission on a reel-to-reel system then adjust the tape speed until it "played"on the system.

Metorburst has been used by Uncle Sam for at least two decades I know of.

Also, some commercial services use it to communicate with Over-the-road trucks prior to cellular. The system was used in the 47MHz range, according to an article on the subject in Popular Communications some years back.

Hey pig vomit
How long is going to be before webtv boots you. like bellsouth, mindspring, and a few others. Gee what you going to do when you can't use your new webtv box anymore. Darn money you could of used to fix that piece of junk MLA 2500. Oh thats right you don't know how to fix it, your stupid. Are you still on academic probation at that school that no other college in the contry will accept cedits from. I bet your there for your high school diploma. How are you paying bills there pig vomit are you back to pushing dope to the kids you keep around your house. Or are you pushing dope in that community college that accepts dope heads and drop outs. So how are you paying your bills pig vomit. Is that scum your married to walking the streets again or is she making movies again. I know her and the kids you keep around the house are making movies. I wonder if the sheriff there knows of your activity. How many letters have you gotton from Hollingsworth about you QRMing when your all hopped up on that dope you take and on all that booze you drink. I wonder how long it will be before that crappy callsign you have will be back up for grabs. I can't wait to read about you loosing your ticket. I will laugh my ass off.
bye you peice of scum

Has anyone written any software or done any analysis on tubes?

Specifically, what I want to do is model the effects of a 12AX7
(and various other) tube on a signal, for the specific purpose
of eventually modelling a guitar amp.

Any helps, hints, tips, links, references, or whatever, please
either post or e-mail me.

Thank you in advance.

You're in the wrong newsgroup. Ham radio operators have no time for sex.
They're much too busy collecting grid squares, 10-10 numbers, QSL cards,
reception reports, and exchanging important information about their health
ailments.

The Radio Shack speaker mic works fine with this radio. I think that
it's cheaper than the ICOM version.

How much more of a sewer and "Alice-in-Wonderland" do you want
both the commercial and the amateur spectrum to become?

> This isn't a very good analogy, because the
> radio spectrum is not comparable to land. Whereas land can and should be
> privately owned, the radio spectrum is and should be public property.

Then why are you applying land ownership/use concepts such as
"private" or "public" "property" to the regulation of its use?

I know that it must inflame the non-professionals for me to say
this, but the professionals have been charged to be the manager
of the resource by the government, which bottom=line is the
representative of our society, and to get a professional job
done. Get out of the way and let them do it.

In this day and age, people want to make it illegal for white people to prefer their race over others and for this we are called racist.
I think its more of a matter of preference and it only turns into hate when the right to preference
is taken away.
As for me, I want a choice and don't want others forced on me.
Call me racist or call me whatever you want, the choice should still be mine and I would be alot
more receptive of other people, other ideas and other perspectives if they were not forced and crammed
down my throat day in and day out at work, at home, on TV, on billboards, on radio and everywhere else I can
think of.

I haven't replaced the lithium battery in my HTX202 but I have replaced the final transistor and the BNC connector. RS will order any part for any of their stuff. Give them the number of the part off the schematic (along with the model number) and they will order it. The lithium battery is easy to get to so should be easy to replace if you can solder at all.

This is for that old burned out guy we just love to hate hey pig vomit
this is for you. I bet when you woke up next to that bag you live with
the first time she wanted to run. You both couldn't tell who was the
uglyest.

Here are the warnings that, had they been in place when we were active,
we might not be here...not.
The FDA is considering additional warnings on beer and alcohol bottles,
such as:
>
1) WARNING: consumption of alcohol may make you think you are
whispering when you are not.

2) WARNING: consumption of alcohol is a major factor
in dancing like an asshole.

3) WARNING: consumption of alcohol may cause you to tell
the same boring story over and over again until your friends
want to SMASH YOUR HEAD.

4) WARNING: consumption of alcohol may cause you to
thay shings like thish.

5) WARNING: consumption of alcohol may lead you to
believe that ex-lovers are really dying for you to
telephone them at 4 in the morning.

6) WARNING: consumption of alcohol may leave you
wondering what the hell happened to your pants.

7) WARNING: consumption of alcohol may cause you to roll
over in the morning and see something really scary (whose
species and/or name you can't remember).

8) WARNING: consumption of alcohol is the leading cause of
inexplicable rugburns on the forehead.

9) WARNING: consumption of alcohol may create the
illusion that you are tougher, handsomer and smarter than
some really, really big guy named Chuck.

10) WARNING: consumption of alcohol may lead you to
believe you are invisible.

11) WARNING: consumption of alcohol may lead you to
think people are laughing WITH you.

12) WARNING: consumption of alcohol may cause an influx in the time-space continuum, whereby small (and sometimes large) gaps of time may seem to disappear.

13) WARNING: consumption of alcohol may actually CAUSE pregnancy.

Remember: When you drink, don't drive.

There are several improper conclusions here:

Homosexuality doesn't imply pedophilia. In fact, the majority of pedophiles are straight guys not gay ones. They become teachers, priests, youth counselors because of access to young people. I don't know responsible leaders in the gay/lesbian community who condones pedophilia. BTW, I am married and no latent homosexual tendencies but I am tolerant of other individuals' beliefs.

There are more pipe bomb builders who are not hams than ones who have ham tickets.

Where do you hang out that you've met all these abnormal personalities?

[Amateur Radio] It's not a hobby for minors, at least anymore, and none in my house.
You subscribe to the Internet, better quit that too as there are more creeps lurking there than on the ham bands. And don't send your child to school becaus their close friend might just be a drug pusher.

In conclusion, sounds like you need tutoring on how to raise children.

>Does anybody know about military usage of meteor burst communication?

Well I am sure somebody does, but likely most people who do
would not be allowed to discuss it.

>I wonder security level and how this security can be obtained.

If you are speaking of High Speed systems like HSCW, tlaked in
QST sometime last year. It ought to farily high given the fact that
it is likely tranmitted at a speed known only to the sender and
receiever, and could also use the basic digital encription methods.

Wether the Millitary has fileded or even tested such a system
is not known to me. It seems a bit unlikely that they have, given the
fact so little about it is known to us hams (the millitary has trouble
keeping things secert for at that long when talking about basic
concepts) and the avalabilities of Satelite systems.

I have heard that that Army of Engineers does use such a
system to tranfer data concerning leevie monitoring and other stuff
about which security is not a big issue big avoid the day in and day
out costs of using a sat is an issue. It is possible that such a
system is testbeding ideas for a larger Military system but since that
would rather logical I kinda doubt it

Hello All,

I thought I would post this in the groups, to invite all of
you to my new webcasting website.

http://www.honk.org/jpx

The first of it's kind ever. Live Amateur Radio Webcasts
from Ottawa, Ontario Canada, delivered live on the net.

Listeners will require Windows, and the lastest version of
Winamp.

All webcasts are streamed using MP3 technology.

So if you are interested in listening to some of the
Amateur Radio Activity from the Ottawa, Ontario
region, and are to far away, come check it out!

Visit my website for our schedule and other information.

Also, we have special presentations and music webcasts.

Our official Launch is Thursday March 11th 1999.

Have fun and enjoy!

James Poulin
VA3JPX

Then why is the National Gay Lobby consistently trying to persuade our elected official to lower the age of consent? Why else would anyone want to to this??? Think about it for a minute. What does the word consent mean? It means to be able to legally engage in sexual relationships without recourse (other the rape). Im a heterosexual and I dont have a problem with the current age of consent.....In fact, I think it should return to the age of 21.....just ask Monica.....

People have the right to voice there opinion. Thats called freedom of speech. People don't have the right to spead lies about others thats called libel. So with this in mind why is it when people of the white race try to stand for something they are called racests and when people of a minority do its a equal rights thing. I hope you know what I'm trying to say. So if I am for anything to do with my race even though I'm in a group that is the largest group in the United States I stand for HATE. See this is the problem I want the same thing as everyone else I want a fare shake. If I fly the southerncross that makes me a hate person. Well heck the southerncrosss has flown over NASCAR for years. For this stock car fan I always thought that it stood for a stand against traffic laws. REBEL! So in these trying times we live in remeber live and let live. If you are white and you belive in your race don't let people get you down by calling you a Hate person. All white people arn't about that at all we just want the same thing everyone else does a fare shake. Another thing that burns me up is when another white person gets on another white person about this so called HATE issue. Remeber we all live in a free country and we are all allowed to have a opinion BUT we aren't allowed to spead lies about each other. So as far as the Great liberty I agree that we have the right to disagree.
live and let live
Of course this is just my opinion I could be wrong.

I recently downloade Lux-Log for Windows by LX1NO. My requirements are similar yours. So far, I've found that it is flexible, powerful and free. It does require a fairly powerful machine, as the code and database files are quite large. The author states that it was written using Powerbuilder. I don't know about .DBF file support, but it does support import/export in a bunch of formats.

Lux-Log can be found at http://www.qsl.net/lx1no/

My only complaint so far is that the installation procedure is not simple. The download consists of a bunch of self-extracting .EXE archives that must be downloaded and idividually executed, before running the install program.

> >
> >Bob N6NE

All FEDGOV agencies are subject to the Communications Act. FCC is
charged with execution and enforcement of the Act which it clearly
is not doing. The no-license status of some agencies does not
mean that agencies are not subject to the Act, only that equal
protection under the law is not being respected. This means that
the FCC is just guilty of another crime, not that the FCC cannot
be guilty of illegal jamming, misprision of felony, conspiracy to
classify documents to avoid criminal prosecution, etc.

I return the discussion to the original topic, and
present details available at:
http://www.atlcom.net/~geozim/index.htm

FCC JAMS HAMS;
the FCC is a criminal faction of a criminal executive branch,
engaged in a criminal coverup which is further protected by
a criminal Justice Department, also a party to the crime.

The FCC knowingly, intentional, deliberately, willfully and
purposefully supplied radio jamming equipment to the FBI and,
with reasonable assumption, to the US Air Force for the
purpose of jamming AM and FM radio broadcasters, TV
broadcasters and the Amateur Radio Service. The amateur
station jammed was defined as a Title 47, Code of Federal
Regulations, Part 97.405 Station in Distress, relaying
emergency communications critical to safety of human life.
As a result, appoximately 100 people died.

FCC is also a deliberate violator of the Freedom of
Information Act, using an exemption of documents not
allowed under the list of exempted documents types.
Whereas, I have not posted details on this to the

website yet, you can read the 36 descriptions of
FOIA requested documents in the FOIA Administrative
Appeal letter. All of these are denied on the basis
that I have figured out what the nature and content
of the documents are, and the FCC does not want to
verify my logical, analytical and deductive work
that has narrowed down the documents almost to the
point of writting them myself. Actually, I already
have two of the documents, and stand ready to
publish them, as soon as I can arrange to leave the
country, and post them from a safe place.

Neither last nor least, but in closing on FCC criminality,
FCC is a criminal co-conspirator with FBI to classify
documents pertaining to the criminal operations of the
FCC and FBI. Such classification of documents for the
purpose of avoiding criminal prosecution is specifically
described as a criminal violation in any Executive Order
pertaining to such classification at the time of
classification.

Get the FCC out of the control business, contact your
Congressman, ask that he support Henry Hyde of the House
Judiciary Committee to convene a hearing into the
criminal coverup by FCC Chairman Kennard of the
criminal operations of the FCC and FBI and US Air
Force engaged in Communications Act violations.

Get the American Radio Relay League out of its
tyrannical misrepresentation of the amateur community.
Publish the fact that the ARRL board voted not to
reveal the criminal operations of the FCC and FBI.
What decent person would be a member of such
a criminal organization. If you are in the ARRL,
moral integrity demands you quit.

The unlicensed status of some agencies does not exempt them
from law. Section 305 and 333 of the Act would make it
criminal for any agency to cause interference. Section
326 makes it criminal for FCC to engage in censorship,
and jamming is certainly this with extreme prejudice.

I return this discussion to the original topic
of FCC and FBI criminality, expanded at:
http://www.atlcom.net/~geozim/index.htm

FCC JAMS HAMS;
the FCC is a criminal faction of a criminal executive branch,
engaged in a criminal coverup which is further protected by
a criminal Justice Department, also a party to the crime.

The FCC knowingly, intentional, deliberately, willfully and
purposefully supplied radio jamming equipment to the FBI and,
with reasonable assumption, to the US Air Force for the
purpose of jamming AM and FM radio broadcasters, TV
broadcasters and the Amateur Radio Service. The amateur
station jammed was defined as a Title 47, Code of Federal
Regulations, Part 97.405 Station in Distress, relaying
emergency communications critical to safety of human life.
As a result, appoximately 100 people died.

FCC is also a deliberate violator of the Freedom of
Information Act, using an exemption of documents not
allowed under the list of exempted documents types.
Whereas, I have not posted details on this to the
website yet, you can read the 36 descriptions of

>so much for the opinions of cbrambo.....

Rosie, CBRambo might not be wrong. The suit against Yahoo is still just a suit. There has been no pre-trial ruling or summary judgement regarding this matter. When something is placed on the internet it falls under "Public Domain". The term public domain has a very broad meaning. Im sure the Yahoo lawyers will be using this strategy in Yahoos defense. The bottom line is a suit is just a suit until it is ruled upon and then appealed by the Supreme Court for final disposition. I wouldn't count on CBRambo remarks being incorrect.....yet.....

The FCC has pretty strict rules in regards to FRS transmitters. These include a max of 500mW output and a max deviation of 2.5khz. I am not sure what the deviation of the W32A is in the FRS frequency range. I would "guess" that it is NOT legal to use a modified ham HT in the FRS range. Hope this helps but I am not an expert in FRS matters. 73

Hi everybody! I just wanted to introduce myself. My name is Modesto and my callsign is KQ6JX. I am an Advanced Class "ham" and have had my license for about 6 years now. I enjoy getting on the HF bands (mainly 20 meters) and meeting new people in other countries. Hopefully, I'll be able to visit all those countries. I am 21 years old and reside in California.

73,

Modesto G. Bascos III - VRM

I need a circuit for a frequency counter, covering a range of about 500kHz
to 30MHz, for amateur radio use, preferably using TTL i.c's.
I intend to use it for measuring the frequencies of vfo's, local
oscillators, etc. The circuit should preferably be as simple and inexpensive
as possible. If anyone can help by suggesting a suitable circuit, please
email me.
Thanks.

No. It's attitudes like yours which "screwed the hobby." It's also attitudes
like yours which will cause me to celebrate with joy when ham radio as we know
it ceases to exist and the majority of the bands are turned over to commercial
users.

I never thought I'd live to see the day, but...

You are absolutely correct on this one, Dan. The Civil War was primarily fought NOT over slavery but rather, STATES RIGHTS! The right of individual states to decide matters for themselves vs an all-knowing, all-intrusive, "one size fits all" federal government, meddling in all aspects of our lives. If the South had won the war, my guess is that we wouldn't be experiencing the near-strangulation levels of government over-regulation that we're faced with today in this country.

Selling Narco HT870 air band portable. Very good shape. Has both COM and NAV freqs, backlit LCD display and 20 programmable channels. Haven't used in several years and battery is dead but powers up fine from power supply. Can't locate charger but is commonly available 9.6V with coaxial plug. Battery is a BP600, also commonly available. With leather carrying case. $200 obo.

Let me know.

Please do NOT post to rec.radio.space about policy matters...
Secondly....there are people who have brain disorders who cannot learn code...this is a disability that they cannot help. Also, there are people who could care less about HF and would rather tinker with microwave, high speed digital, moonbounce, and satellites.

Anyway..my two cents..

While I hesitate to leap in to a flame, let me make the following observations. First, the ARRL and indeed the FCC have nothing whatsoever to do with opening the HF bands to no code licensees, at least in the first instance. The amateur service is governed, above all, by international treaty ... remember that question on your no code Tech exam about what ITU region the US is in??? Well, at least until the next time that the ITU revises the treaty, EVERYONE that operates below 30 Mhz is required by international agreement to have demonstrated proficiency in CW. The FCC and ARRL couldn't change that if they wanted to.
The exact speed that one must demonstrate is variable from one country to another, but won't go below 5WPM until the treaty is changed.

Second, with the last CW transmission by the Coast Guard and the deletion of the requirement to have CW on board ship, it is clear that that is the direction that things will move. Will this be the end of CW?? I sure hope not. I rarely work voice in the amateur bands and stick mostly to the worlds first digital mode, but it's clear that this will become a matter of choice in the next 10 years, again FCC and ARRL notwithstanding. The ITU will go that way, and we will perforce follow - a matter of international agreement not regulations.

IMHO, the quality of QSO on CW is much better than phone on average, so I tend to hang out there. But digital modes and spread spectrum are coming. For those of us first licensed in the 50's that may take some re-education, but all and all it should work out all right. If you love CW, then stay on the air and make CW fun. Don't overrun new operators, but train em up right and some may learn to love sending digital by hand at about 5 baud..... otherwise, 20 years from now it will be "CW? Whazzat?"

enough from me

Ahh, but that is not really necessarily so. While it may (or may not) be
true that a particular
radio is not type accepted for a certain frequency (for example, Linears
CANNOT be type accepted
for operation above 24MHz and below 35MHz) (see G1C09 in the General Class
question pool)
that it cannot be legally modified and operated by a ham. This is a common
misconception but
one disproved daily by lots of civic minded volunteers....

But then I know that you already knew this, so....

Power corrupts. Absolute power absolutely corrupts. Our government is corrupt. All governments are corrupt. Its inevitable. Its run by people who are simply seaking fame and power for themselves. After they screw up the system enough, and it comes crumbling down onto their thick heads, then they'll look up and say 'oh... theres other people besides us who matter?.... weird....' and then it'll start all over again. I'm not paranoid, i just watch to much bad sci-fi and anime.

My 2 pennies worth.....

Gordo is a great guy, and I think he has done quite a bit to encourage the hobby. I can't speak for him, but
since I do know him I'd like to say that that is my feeling, honestly and truely. The ARRL also puts on a two day wonder course, so I wonder if your problem isn't really with the FCC or someone. Gordon doesn't make the rules or set the standards so where's the beef? When I got my first license the question pool was secret, and the general class exam was a real task... well, I was young... but you had to be ready for anything. Instead of naming an oscillator from a schematic, they gave you a name and you had to draw the darn thing.

With no question pool.

So I think that the responsibility really lies with all of us to take the two day ARRL wonders, the 3 day West wonders and the other wonders and teach them the desire and skills needed to be good operators. At least these guys are trying to do things right, and most will accept comments offered in a helpful spirit well. Lord knows when I got my novice ticket I was a horrible operator. My first QSO I just FROZE at the key... we were rock bound in those days and I was, like, shocked that someone answered me. He probably thought I was nuts.

You should here the UNLICENSED guys on the 2 meter repeaters.... like I say, when Gordo gets done with them they at least WANT to be good, accepted hams. Keep the hobby fun, and help out.

My 2 cents.

5792. Philly CBer gets $3,000 fine

Newsgroup: rec.radio.amateur.misc
Date: 1999-03-10 00:00:00 UTC
From: Curtis CCR <curtisccr@netscape.net>
Message-ID: <7c4l3f$j2d$1@nnrp1.dejanews.com>
Source record: 148520

The FCC affirmed a fine against Leroy Harris, IV in the amount of $3000 in an order issued on last Friday.

Harris received an NAL in Novemeber over violations of CB rules in November, but never responded to the FCC. The NAL came from the Commission's Philadelphia office.

Cited were violations of 95.410 and 95.426. I assume that means Mr. Harris was running illegal power and refused to allow FCC inspection of his CB station.

I guess the FCC is working coast to coast on some of these services we all thought they abandoned (including amateur to some extent). As many of you heard, the FCC shut down a notorious repeater in Berkeley, CA a week or so ago and put the trustee on notice that he could lose his license. Several other amateur operators have had upgrades and other licnese actions put on hold while the FCC reviews their involvement in violations associated with that repeater.

I would begin by looking at SPICE models which have already been written
for tubes such as the 12AX7, etc. I can't believe that there aren't at
least a few out there.

Start your web search with SPICE, and go from there (ignoring any hits on
Spice Girls fan pages......)

Sorry for replying to my own post, but you may have better luck searching on pSPICE rather than just SPICE.

Also check out the newsgroup rec.audio.tubes......I added them to the newsgroups for this message.

I got a prog for ya at my site. It's called LOGBUDDY, and I originally released it as shareware. I lost the source code, so I can't revise or upgrade it. I have since given it up to the public domain, though the shareware registration begs are still there. No crippling, no timeouts. You are welcome to it. It installs with a regular SETUP.EXE program, and is native to Windows 16bit. I no longer offer any support, and I don't plan on a re-write any time soon since I no longer keep a log. It can be used to generate a QSL. It DOES NOT directly support contesting. I hate contesting and since I originally wrote it for my own use, I did not include contest support.

The whole story sounds fishy. If he was taking 8-mile power-walks six
times per week, why take a "short cut" through the school? One would
think he'd want to add mileage, not look for ways of shaving mileage
off.

Just as my office is paid for with tax dollars, no one is allowed to
set foot in it without my permission. Just as military bases are paid
for from tax dollars, try to get onto one that's closed to the public.
You don't have access to everything your taxes go towards.

5801. Re: meteor burst communication

Newsgroup: rec.radio.amateur.misc
Date: 1999-03-10 00:00:00 UTC
From: feedback@pcbmilling.com
Message-ID: <36e5e020.11038828@news.mindspring.com>
Source record: 148529

Wow, brings back memories...!

I used to work for a company that made meteor burst communications equipment (Hadron Communications Products Division). The place closed about 6 years ago. They made solid state, 1kw suitcase terminals that used packet radio techniques for digital communications. The equipment was intended for secure communications where "hiding" the sending station's location was important. The system operated in the 40-80 MHz (I believe) region.

Hadron was cited in a textbook on meteor burst communication (I think it was published by Artech House). The only commercial applications that I ever heard of were an attempt by a trucking firm to locate and communicate with vehicles (all of the power and processing was to be handled by a BIG site in KY) and a monitoring system called SNOWTEL which monitored snowfall and weather data somewhere in the western US.

Supposedly the Air Force had some kind of meteor burst system but I'm not quite sure what it was used for.

Frankly, with the rapid improvements in satellite communications, meteor burst systems have, in the words of a former coworker, been relegated to the status of "a novel means of communications".

Assuming of course that you have fine enough control over the machine.
The point of almost all encryption is how long will it take you to do
the decode, the rest is either wishful thinking or intended to totaly
secure. The simple fact that one control the speed of transmision,
which would not have to be constant from brust to brust will so down
any effort to decode the tranmistion by any outside party

Hi,

I just bought a used W32A (one year old) and found it to be very good.
Considered that I am a new ham (one week old), this radio is very easy to use
and have a lot of features.

I agree that you should also get the programming software for it as it makes
using the radio very easy. You can use it to backup settings into a file and
clone the radio.

BTW, I have a question for the expert W32A users out there. How do I use the
DCS feature of the radio ?? I managed to use CCTSS ok and would like to know
how to use the DCS encoder/decoder. Also, I only found one mod to extend the
TX, are there anymore mods for this radio.

Thanks in advance. 73,,,

<BOOMHAUER MODE>
Yeah man I tellywhat that dang 'ol packet radio stuff is just buzz and beep and click-click-click and you got your internet stuff and all and it's just no good if it's not dang ol' straight key cw or spoken unaccented english.
</BOOMHAUER MODE>

But seriously, Check your ICOM to see if you can program known FM voice repeaters (and offsets, tones, etc.) into memory, then scan the memory channels. You may also be able to skip some channels during scan. Keep in mind that a few hams are using mic-encoders, which imprint a short burst of data at the end of some voice transmissions. Right now I find it annoying, but that's probably because I don't have one.
The 1998-99 ARRL repeater directory should have the voice repeaters listed for your area. I think I remember reading that they have excluded digipeaters from the listings. Dang 'ol yellow book.

5822. Re: It is slander, not libel

Newsgroup: rec.radio.amateur.misc
Date: 1999-03-10 00:00:00 UTC
From: W1PEV <paulvanasse@tp.net>
Message-ID: <3UvF2.27$ml3.195@news13.ispnews.com>
Source record: 148550

There is a big difference in both slander and libel. Slander is a means of acquiring punitive (punishment) damages for incorrectly besmirching the character of someone or something. Libel is when a person or entity is responsible for causing either financial or character damages that can be estimated in dollars. Libel suits can result in compensatory (compensation for the loss) and punitive (financial punishment for creating the loss). People will usually sue for Slander when they cannot physically prove the amount of financial loss they incurred due to the slanderous act. People will sue for Libel when obvious damages occurred immediately following the slanderous act.

Remember when Dateline showed that videotape of GMC trucks exploding upon a side impact. It was later revealed that the Dateline producers used a small incendiary device next to the gastank to promote the explosion. Dateline never told the TV viewers that this was done, all they showed on video was the trucks bursting on fire upon side impact. GMC Trucks reported and proved that truck sales declined immediately following the broadcast. This is and example of a Libel suit.

Dana, this is the miscellaneous amateur radio NG. For technical queries,
why not go to one of our specialty NGs? Below is a list of what's
available.
73,
Jeff WH6U

X-Newsgroups: rec.radio.amateur.antenna,rec.radio.amateur.boatanchors
X-Newsgroups: rec.radio.amateur.digital.misc,rec.radio.amateur.dx
X-Newsgroups: rec.radio.amateur.equipment,rec.radio.amateur.homebrew
X-Newsgroups: rec.radio.amateur.misc,rec.radio.amateur.policy
X-Newsgroups: rec.radio.amateur.space,rec.radio.broadcasting,rec.radio.cb
X-Newsgroups: rec.radio.info,rec.radio.swap,rec.radio.scanner
X-Newsgroups: rec.radio.shortwave,rec.answers,news.answers,
Subject: List of the rec.radio newsgroups
Followup-To: poster
Approved: news-answers-request@mit.edu,rec.radio.info-moderator@primenet.com
Distribution: world
Expires: 01 April 1999 (no joke!)
Summary: This article provides a list of the rec.radio newsgroups; it is
posted alternately with the longer "Guide to the Rec.radio NGs"
Keywords: radio amateur ham cb scanner shortwave netiquette
X-Last-Updated: 1998/03/29
Version: 1.1 created 98/03/05 03:50:23
Posting-Frequency: posted on the 1st of each month

Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate
audience, below is a list of the rec.radio newsgroups. In most cases,
a group's name will explain its purpose. Cross-posting should rarely
be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)

rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-running thread results from a single cross-posted article, and the contents of such a thread drift further and further away from being "on-topic" in the various NGs that receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups" posted on the 15th of each month.

Jeffrey Herman, WH6U
(rec.radio.amateur working-group)

Good question. I know what you mean. I just want to be able to use my W32A to transmit in the FRS range. Able to transmit in extended mode does not mean I would transmit legally. Hope transmitting in FRS range using a ham radio is not illegal, or is it ??

5828. Re: It is slander, not libel

Newsgroup: rec.radio.amateur.misc
Date: 1999-03-10 00:00:00 UTC
From: "Ernest J. Hernstein" <commdept08@techscan.edu>
Message-ID: <e4xF2.3290$Ek.5968657@news1.mia>
Source record: 148556

An interesting thread, and a subject which many posters in this NG should note carefully. Friends, when you publish a personal attack in this or any NG which questions the character and fitness of a person to perform in their occupation, you had better be prepared to prove it in a court of law! A few will scoff at this, and they quite possibly may find themselves in that hallowed room where the person in the black robe is boss. A quick lesson in libel law:

"Words that are libelous per se have clear, unambiguous, and commonly agreed to meanings. Among the many 'red flag' words that are defamatory on their face are adulterer, thief, drunk, alcoholic, and cheat." (Middleton & Chamberlin, The Law of Public Communication, 1991)

"...and also embraced therein is any such publication that relates to a person's office, trade, business, or employment, if the publication imputes to him some incapacity or lack of due qualifications to fill the position, or some positive past misconduct which will injuriously affect him in." (Steven H. Gifis, Law Dictionary, 1984)

So, if one publishes in a NG the following, it could constitute excellent grounds for a libel suit:

"Joe Someone-in-USA is a drunk and got fired.
He did such and such while employed. Joe now does
so and so and is down and out of luck."

If you feel lucky and want to roll the legal dice, see you in court!

Very well put. Many people believe that the confederate battle flag indicates a belief in racism. This is incorrect. The flying of the flag indicates an individual's belief in states rights. It indicates the belief in the "original" constitution and bill of rights of the United States of America. Unfortunatly this ended when the fedralist's achieved victory over the confederation of states known as the Confederate states of America. It also shows SOUTHERN PRIDE.

FYI I was born in Ohio, and through the grace of god, found my home in Dixie. One day when the victorious Yankee government totally takes over your lives, you will wish the Rebels had prevailed. And for you non-believers out there, read your constitution, in particular the parts pertaining to "limiting federal government powers" and the RIGHT of the citizens to CHANGE any government that does not respect individul and states rights. This could include overthrow by peaceful means, and outright succession from the union.

One more thing...you can thank the "carpetbaggers" for the present racial problems in this country today. Read your history.

Greetings, Looking for suggestions for a dual band (2M/440) mobile rig for my 1996 Dodge Ram pickup. I do not need all kinds of bells and whisltes. I want a radio that will monitor both bands at the same time or even 2 different frequencies in the same band. Cross band repeating??? Not necessary. Removable faceplate??? Nice but not required. Something easy to use and reliable. I am not on for extended periods, but would like it while I travel. Thanks in advance, Mike

>with more 'room' than what little there is now, and that it wasn't all
>'discovered' (as in microwaves, especially) when ham-radio got started,
>etc...

That sounds like a great idea! I, too have often wondered about the history of amateur radio frequency allocation. Although the InterNet is a vast wasteland of lunacy, it is also a never-ending source of pertinent information for the serious researcher. I'm quite certain all the information regarding this subject is most likely somewhere on the Net. Good luck to you in your endevour, and please do e-mail us when you put your soon- to-be-new-found knowledge together in time-line format and then posted to this and other Newsgroups so we all can learn and have a better appreciation and deeply routed understanding of just how our portions of radio spectrum became "ours" in the first place.

Again, Good luck to you.

This is typical of the many support morse people. They are very very similar to the group that wants all hams to be able to build and operate a spark coil transmitter.

Morse code is dead . Period . Fact.

Just as the the natives who waited on the shores of American as the Europeans developed the farms , the land and the economy.The save code people are hoping some one will get rid of all those wagon trains that keep coming.

I know thousands of very intelligent engineers, computer hobbyists, sailors, and others , ". Who hate morse code " and would be a life saving force to the dying hobby of ham radio.
These people work on for example , on sail boats and spend lots of money.
One fellow is in charge of building and designing a HDTV system for the tv station he works for. He owns a boat and has no time for code but loves ham radio.
Wake up before history rolls over you

P.S.
I can send and receive codeat 15 wpm (coded groups) if you think I am lazy.

:There are several improper conclusions here:
:
:Homosexuality doesn't imply pedophilia. In fact, the majority of
:pedophiles are straight guys not gay ones. They become teachers,
:priests, youth counselors because of access to young people. I don't
:know responsible leaders in the gay/lesbian community who condones
:pedophilia. BTW, I am married and no latent homosexual tendencies but I
:am tolerant of other individuals' beliefs.

1. Most of us are more upset by pederasts than general pedophilia.

2. To be tolerant, one must disagree the other person's views. Since
you seem supportive, you are more of an advocate. How tolerant
are you of, say, the religious right?

:-----
:There are more pipe bomb builders who are not hams than ones who have
:ham tickets.
:-----
:Where do you hang out that you've met all these abnormal personalities?
:-----
:[Amateur Radio] It's not a hobby for minors, at least anymore, and none
:in my house.
:You subscribe to the Internet, better quit that too as there are more
:creeps lurking there than on the ham bands. And don't send your child to
:school becaus their close friend might just be a drug pusher.
:-----
:In conclusion, sounds like you need tutoring on how to raise children.

5850. Re: Hams I have had the displeasure of meeting

:I'm not sure I understand the premise and conclusion here:
:a) Being homosexual automatically makes you pedophile?

:There certainly are homosexual pedophiles as there are
:HETEROSSEXUAL pedohiles.

The confusion is the subset of pedophies called pederasts.

:BTW, I'm not familiar with the National Gay Lobby or their policies but
:I'm sure none of its leaders is suggesting lowering the age of consent
:to 8, 10, etc.

No, but where does one set the age of consent? The Bible placed
it at 13. Which means are can be tried and hung at 13. Or married.

As it stands now, 18 and 21 are too old. Moving down to 16 would
be better.

:The biggest scourge of teenagers is pregnancy not whether some gay or
:lesbian is lurking in the public toilet ready to pounce on them.

Most teenage girls who get pregnant, were fucking by some guy who
was 10 to 15 years older than they were. There are a number of males
age 23 to 33 that prey on teenage girls. The guys who are in their
teens
can't compete.

The problem with gays is that they are outside the norm. All societies
have problems with those do not fit neatly into the molds of their
communities.

:----
:Anyway this discussion has nothing to do with radio.

For all my years in ham radio, I have operated 99.99% CW. What does that mean? It only means that I like CW. I love to rag chew with people. I just like to put my headphones on, leaning back in my chair, close my eyes and "copy the mail". I didn't start out day one with this ability. It took years of "just doing it" before my proficiency slowly built up to this point. And I must say that in all of this hoopla over learning the CODE (a four letter word by the way), my base reaction is to feel sorry for all those Americans who's only pride is taken in their ability to avoid a challenge. Hurray for you - for I think you will win the day.

> matter of time. Like the man says, "You may as well lay back and enjoy it."

I wonder if the no-coders realize that they may be exercising a prejudice toward handicapped people? I am one of those handicapped people. I have recently become a victim of my genetic misfortune. I am quickly loosing my hearing. I have two problems. The first is the degeneration of my inner ear nerves which make understanding even clearly spoken voice conversations difficult. Add QRN and a pile-up to the mix and I'm completely left out. The second problem is this thing called tennitus. That is when you have a constant "ringing" in your ears, all day, all night. Its like having the 40m phone band audio on all the time with all those heterodynes and no notch filter. Between these two, I have given up on any phone activity. Yet CW comes to the rescue! For some reason (I don't understand) I am still able to comfortably carry on a CW contact, even with QRN, even in the middle of a pile up.

If the future unfolds like AB5HV predicts and CW is no longer required. Then I expect few to none of the new americans (those who never rise to any challenge when they can whine, complain and scam their way into a reward) will never learn the code and will effectively shut me out of ham radio. It's already started, even though I'm a middle aged baby boomer, I find that the majority of hams I make contacts with are older than me. They will eventually die off and I will be left all alone, pounding brass, calling CQ on the all "phone" HF bands being shunned and ignored by those cruel, hate filled no-coders.

On a more practical note, If that future is inevitable, maybe we (the dwindling CW operators that is) should look ahead to the day when we must "share" radio spectrum with the phone people. Can we really co-exist? I have a hunch that the phone people will effectively be able to operate and not really be aware of our presence. The ability of DSP technology to instantly null out carriers (like CW) will allow phone operators the freedom to fire up anywhere they like without having to first QRL for CW activity. I'm not so sure that the same immunity can be achieved on the CW RX end. We should push our own technology forward to prepare for the future.

Always fun to jump in - Jeff - KA9S

I see peoples point on this issue, However in Canada you can work 6M and up with a basic licence, for what I do with HAM, I have NO NEED for code. I have no interest in it, and have no plans to learn it any time soon.

Why learn something I will NEVER use anyways? No point. I've worked the Shuttle and Mir, without knowing a single letter or Morse.

Does that make me any less of a HAM??? Don't think so.

Just my opinion.

Well, I am a staunch CW-ist. I don't even own a microphone. But there are hams who just don't want to make the effort to learn CW. It is not stupididty... they just don't care about working CW. Let them be. If they are satisfied with the action above 30 MC, I got no problem with any ham who never learns CW, though I might feel a bit sorry for him, missing out on so much REAL radio.

We have had the no-code license for a while now. Sorry to say it, but there is no turning back. Everything is getting easier, and will never be permitted to get harder. That is the nature of the beast.

You can't buck this "progress". The dumbing down of radio has solid momentum behind it, and there is not a thing you can do about it, except to welcome the new guys, set a good example, and maybe... just MAYBE you will find at least one new ham up to the challenge of CW. An attitude won't help. Even a CW-curious ham won't come to you for help if he thinks you are an asshole, so try to be a little more tolerant of the Morse-o-phobes. You never know who is watching or listening.

I may as well be the one to break it to you, in case you have not seen the writing on the walls. Within 10 years, 20 years tops, the HF bands will be wide open to no-coders. If the no-code tech license gives your ulcer fits, I hate to think how you're gonna react the first time you hear a brand new ham with a brand new fone-only rig complete with voice keyer with a roger beep calling CQ on 14010. CW-ists seem to be the minority now, so it is only a matter of time. Like the man says, "You may as well lay back and enjoy it."

One Of Each / Will not split up the two. They are one month old, barely used and mint. Each has 340mw power with the (not supplied) 3AA Alkaline batts. If you use an optional (not included) power adapter for the car or power supply, it jumps to 450mw. I am able to hit several local repeaters from my suburban living room with each in the western NY area. Both weremodifed at East Coast Amateur for whatever the available extended frequencies are for each at extra cost during the time of purchase. The were a present from my wife for our anniversary. I have a lot of UHF and 70 cm radios and have just gotten a 10 meter rig that i hope will give me the incentive to upgrade. I'd like to use the money from these Alinco units to go towards the 10 meter unit. The radios are both the same size: 3.94"High X 2.17"Wide X 1.10"Deep and weigh in at just 6.53 oz with batteries. They have the original packaging, instructions and blank warranty cards for you to fill out. One was bought late January and one was bought early February. I am asking $200.00 firm on these which is what I have into them minus the $70.00 modification charge we paid because we wanted it done right. On that end, I never really asked what the extended freqs are, I just like to have radios modified to their full capability whenever possible. I will ship only within the continental United States, NO international transactions. Payment will be by certified check or money order only. Thanks for reading and have a nice day.

I learned the code and have my general now for 2 years if i dont
upgrade then am I stupid or lazy ?
I dont even use the code It is Crazy to suggest the nocode license
expire non renewable. Some people are happy with there no code license
and I am glad they are, I dont upgrade because I am happy where I am.
If it was not for the ARRL ? back to cb that is all we would have.
Do the no code people bother you that much?
I bet You dont even own a mic, All that cw has madde you a little
buggy.
How about have all license expire after two years non renewable then
it would not bother people as much.
-.-. .-- ... ..- -.-. -.- ...
Next time give your call so we will know who to avoid.
If people dont want to use a 9600 bps modem does that mean thery are
lazy or stupid People need to keep up with tecknology
Sorry for mis spelled words I am stupid and lazy.

Stop counting the dots and just listen to the music. Each character has a definate rythm which can be recognised in the same way as the intro to very "Beatles" record, for instance. Just practice listening and it will come. I do not know about other operators but I have found that I no-longer need to listen to individual characters most of the time in 'rubber-stamp' QSOs. For example when I hear "-..---." I write "name".

Get an experienced operator to record for you several phrases, such as "is this the shit?", then listen to them over and over and over again whilst saying out loud the characters. The odd error (with exactly 8 dits) could occasionally be included. Speed should be rather fast, but with a slightly exagerated space between each charcter. It is only a case of forming a mental association between the letter (or word) and the sound. The funnier are the test sentences, the faster it works.

Have fun from Harry - SM0VPO

Very good point Paul. I 100% agree with you. No interest in code at all, and why still keep the demand for code on HF?, the commerical ship and air have cloced it down now, so the point of HAM be abel to take a code SOS call is dead.

I agree with almost everything you say except the dumbing-down of ham radio.
It is not inevitable and we can and should do something about it.

I operate almost 100% CW when on the HF bands but I would be more than
willing to give up the CW requirement if it could be accompanied by the
removal of the written test questions and answers from the public domain.
Memorizing a bunch of answers to pass your extra class exam just doesn't cut
it.

The president of a local repeater club stated in the club newsletter that,
although he held an extra class ticket and was quite proficent at CW, he
couldn't tell you what ohms law was.

IMHO, that reflects the real problem with amateur radio today.

BTW, please don't post to rec.radio.amateur.space. That newsgroup is about sattelites, moonbounce, etc. Not about policy.

I agree with almost everything you say except the dumbing-down of ham radio.
It is not inevitable and we can and should do something about it.

I operate almost 100% CW when on the HF bands but I would be more than
willing to give up the CW requirement if it could be accompanied by the
removal of the written test questions and answers from the public domain.
Memorizing a bunch of answers to pass your extra class exam just doesn't cut
it.

The president of a local repeater club stated in the club newsletter that,
although he held an extra class ticket and was quite proficent at CW, he
couldn't tell you what ohms law was.

IMHO, that reflects the real problem with amateur radio today.

BTW, please don't post to rec.radio.amateur.space. That newsgroup is about sattelites, moonbounce, etc. Not about policy.

73s
Tom

I suppose one way it is different is that Dick isn't demanding that he
be made an engineer without meeting the existing qualifications or that
the qualifications for becoming an engineer be lowered to accomodate
him. Most guys bitching about morse testing for HF all want to operate
on HF.

Come to think of it, that is a huge difference.

5874. Help Heathkit SB 104

Newsgroup: rec.radio.amateur.misc
Date: 1999-03-11 00:00:00 UTC
From: Oris <oris@dirtball.com>
Message-ID: <36E7DA5E.75ED@dirtball.com>
Source record: 148442

Hello
Has anyone replaced the 2N6456 finals in the Heathkit SB104 with the MRF455A's. They come in the same case style. After looking at the MRF455A they have the same characteristics. The differance between MRF455 and the MRF455A (NTE334 and NTE333) is the case style. The price is the only other differance, and that is a big differance. Does anyone have a diagram of the MRF455 in push pull. I was looking at the Palomar 255 amp and it has two MRF455 what appears to be in push pull but the amp comes with no diagram. I would of bought the thing for the diagram. I would like to know what the base resistor to ground would be with the 455's in push pull,and what the resistor going accross the two push pull circuits would be. The base resistors going to ground with the 2N6456 are 10 ohms and the resistor connecting the two push pull curcuits is 100 ohms.
Thank you for reading

You can use this link to search past issues of Popular Electronics and Electronics Now. They have published many articles on constructing frequency counters. You'll then just need to find a local library that has the issues or can get them through inter-library loan.

I'm not sure I understand the premise and conclusion here:
a) Being homosexual automatically makes you pedophile?
There certainly are homosexual pedophiles as there are HETEROSSEXUAL
pedohiles.
BTW, I'm not familiar with the National Gay Lobby or their policies but
I'm sure none of its leaders is suggesting lowering the age of consent
to 8, 10, etc.
The biggest scourge of teenagers is pregnancy not whether some gay or
lesbian is lurking in the public toilet ready to pounce on them.

Anyway this discussion has nothing to do with radio.

I see, Dave, that you have not comprehended the difference between
"qualifications" and "requirements" yet. Better get back to
meditating on those differences. You will never be a mature human
being until you comprehend the difference between Mother Nature
and Bill Clinton.

Also keep in mind that we don't hear speech perfectly either -- that's why we
use phonetics -- to tell the difference between a "C", "Z", "V" and a "B".
We often can tell what the letter is in speech when we hear it in context.
That means that you will be able to go back to your CW copy and correct the
letter/number within a word or sentence but less able to do so in a Call Sign.

5889. FS & FA Electronic trainers (breadboards)

Newsgroup: rec.radio.amateur.misc
Date: 1999-03-11 00:00:00 UTC
From: h89user@my-dejanews.com
Message-ID: <7c9ciropo1@nnrp1.dejanews.com>
Source record: 148457

I have a DeVry Inc. (Bell & Howell) Electronic Trainer w/case up for auction on eBay. . It was likely used in DeVry's technical electronic school classes.You can identify it as Item #75848077. Presently the high bid is only $5.00. There are 4 more days before the auction closes.

The trainer has multiple supply voltages AC at 12.6 volts and 6.3 volts, DC at 5.0 regulated and an adjustable power supply with separate controls for 0 to 17 volts and 0 to -17 volts. It's function generator can provide square, sine and saw-tooth waves. Both frequency and amplitude are adjustable. There are separate coarse and fine frequency adjustments. The workarea has two Velcro strips to hold the circuit being worked on. Two project boards with Velcro strips are included.

It is in great condition and has a hard plastic case with a handle. The case is 5.5 inches high when closed. This allows the case to be closed and put away with the components in place. The unit sits loosely in the hard plastic case that allows the power cord to be stored within the case when it is closed. Some of the dimensions (measured in inches) are given below:

Total top surface 9.75 x 9.5
Total area available for project boards 7.5 x 6.5
Comes with 2 project boards 6.5 x 2.5 and 5.5 by 2

This is the first of five trainers that I plan to sell. None of these other units have been listed on eBay. The other four include 2 Heathkit units somewhat similar to the above except that there is no case and the project boards are not removable.

The remaining 2 units are probably from the 1960's. The voltages available suggest that they are from the tube era (filament voltage). For these old units I also have a box full of the connectors used to construct the circuit. I thought that these units might be interesting to someone experimenting with motor control and robotics circuits

If anyone has any question on the trainer I have on eBay, or any of the others, my email address is h89user@aol.com.

Source record: 148458

I was wondering if anyone had information on the Fast FM SSTV mode on the Kenwood VC-H1 Visual Communicator. Does it resemble SSTV modes like Scottie 1, or does it more closely resemble packet radio? How many scan lines does it offer? How does it send color: separate red, green, and blue; or separate luminance and chroma. Thanks for any information about it. I'm curious.

73's, Ned Raybould, N8OIF

Be careful though. A few years ago (I don't recall the year but believe
it was in a December issue) Electronics Now (or maybe it was before the
name change in which case it would have been Radio Electronics) had a
"1GHz Frequency Counter" that probably would have had problems getting up
to 5MHz. The uathor was a little confused on the concept, and for some
very odd reason it slipped by the editors.

It was a straightforward counter, probably using the Intersil 7208 or more
likely a later variation. But the author put dividers ahead of it to get
a higher count. Two or three decade counters if I recall correctly, so
the mid-HF range of the LSI frequency counter IC could be extended to a
much higher frequency.

The problem was, the author used plain old 4017 CMOS dividers as the
prescaler, and there was no way that they could count any higher in
frequency than the LSI counter.

To compound the problem, last year in the Q&A column someone asked about a
frequency counter, and they were pointed to that same article. Luckily,
someone sent in a followup letter, as there were when the article was
originally published, pointing out that there was no way the thing could
count very high.

So be sure to avoid that particular frequency counter article.

Just more evidence of how out of touch CB-Dumbo is. With all of the problems you see almost daily in our school systems who else but CB-Dim-Bulb would think he could go strolling across an _elementary_ school's property on a daily basis (while the students are there no less) and not have someone question what the heck he's doing there. In my area even the high schools are issuing passes and checking to see who's on the school grounds but our resident Dim-Bulb thinks he can constantly stroll across an elementary school's property on a daily basis and no one will voice any complaint. Duh.

I understand that you may really want to build your own, but if you
change your mind, I have a couple of Hewlett-Packard counters that are
excellent and affordable. They also offer a degree of quality that you
are very unlikely to match.

These are both modular sets that use an upper half that houses the
reference clock and the display, and a lower half that houses the
counter electronics. The two halves lock together, but can be swapped
quickly if you wish to change counters. They are AC line powered.

HP5300A: 6 digit display module with an internal clock that is
accurate to better than 1 part per million. $40.

HP5301A: 10MHz frequency counter with .1, 1, 10 second gate times and
adjustable sensitivity. $20.

HP5302A: 50MHz counter/timer, with same gate times, but also does
period, period average, time interval, etc. $60

Shipping CONUS, $5, or buy all three and I'll pay the shipping.

You seem to be missing a fine point there, Oscar.

How many medical students are lobbying the AMA to make the testing
to be a doctor easier ? None ? Is there a web page for No-Internship
International ?

How many concert musicians are lobbying to make the testing to be
a concert musician easier ? None ?

How many Harvard students are marching in front of Harvard to make
testing for MBA's easier ? None ?

How many no code techs and no ticket wannabe's are whinning,
hoping and praying the testing requirements become easier ? None ?

See the difference ?

And finally, how many of you bozos over there in POLICY realize you
are crossposting this bullshit to the SPACE newsgroup ? Give your
fellow amateurs a break, if we want to read the same old sorry
arguments that were being made five years ago, we'll come over there
and read them. You don't need to crosspost them over here for our
reading enjoyment.

If you can't figure out how to work newsreader software, God help
you if you ever take the top off a 1500 watt amplifier......

>querying him about what he believed. I don't understand why people want
>to interpret the above quote as a general statement about what everyone
>did or didn't do.

I think it's been covered adequately. Sequence was:

1. Colin suggests various ways to bypass cellular service and make telephone calls over the radio. Methods under his consideration include Amateur radio and FRS.

2. FRS is ruled out due to specific prohibitions in FCC regulations, as well as limited distance. Several helpful Amateurs suggest ways to do it by ham radio.

3. Meanwhile, K5PF determines that Colin does not hold an Amateur license; hence, the discussions about how to do this via Amateur radio are a "moot" point.

Certainly, if you become licensed, it would be very appropriate to re-visit this issue. Otherwise, check into Nextel, GMRS, or other suggestions in the previous posts. Just be careful that you don't end up spending more for a system with limited coverage than you would spend for Nextel or Cellular--with it's wider range and increased flexibility. Anyone who's built an autopatch and associated equipment will tell you that you write some big checks--often. In addition, you have to design safeguards to keep others from playing with it. (Most commercial autopatch circuits have provisions for pass codes and long-distance blocking).

Regards,
K5PF

She's right ;-) sort of....

I recall driving with my old roommate (we used to carpool to work) so
after I got my license - and he said "they sound like CBers with call
signs". The more I listened, the more I thought he was right.

The discussions are often no more exciting than those of truck drivers
on channel 19. (no offense meant to truck drivers or cbers - its just
that hams think they are so superior to anyone that uses an unlicensed
service). I and many of the hams I know joke about 2 meters being CB
with call signs.

> I am a professional person
> and have tried to convey to her that its just a certain segment that she is

> faced this problems yourselves. You would think we were criminals or something
> I should let her listen to the shit on Channel 19 on 11 meters and then she
> would
> here something HELP PLEASE ANY ADVISE

Be careful about letting her listen to too much CB. *YOU* might start
agreeing with her.

And jeeez! You aren't thinking about taking her to a ham fest, are
you? With all those goofy looking hams walking around wearing headsets
and hardhats with yagis mounted on top of them! And these people think
they look cool! <g>

The problem is she just has the classification wrong. Most hams are not
lowlifes - only some of them. Actually, most hams are simply nerds.
There is an important distinction between nerds and lowlifes. Nerds are

just boring - but many are useful to society and still deserve some respect.

There are lowlifes on ham radio. We have lot of them here in the bay area that are infesting several local repeaters since the FCC shut down the lowlife machine in Berkeley.

You have to understand that she is just confused. When a lowlife is actually heard on the radio, distinguishing them from the typical ham nerd is pretty easy.

First of all I'm new at this so I don't even know if I'm posting in the right newsgroup anyway hears my question. I'm wanting to try to build an outside magnetic antenna for my mobile cellular phone I have a magnet base that is 3" in dia.with the RG-58u coax on it (I think this is a CB antenna magnet) also I can get stainless steel welding rod where I work from size 3/16" to 1/8"and up to 36"long can these parts and coax be used to build an antenna if so could you please help me.
the reason I'm wanting to build an antenna is that Alltel wants to charge me $80. for an installation kit for each vehicle I need an antenna on which I think I could build my own for a lot less.

It was a play on words, Jeff. The newsreader I use is Delphi's
proprietary newsreader (the guys who furnish my webpage). It
is approximately as old as TIN. It just didn't sound right to
say, "Delphi's proprietary newsreader is not nearly as old as
Morse code." Know what I mean?

Why do you consistently blame "dummies" for the no-code test? WE did not come up with it!! You need to direct your hostilities toward the F.C.C. and the A.R.R.L. We were simply told that "code was no longer required." So we took the test and passed. Now we are one of you! The bands are there for public use. If they remain unused, they will eventually be "sold" to some cellular or S.M.R. company. So wake-up and smell the coffee! There is definatly a "place" for C.W. in the hobby. But don't chastise people for taking advantage of the "relaxed" rules. Maybe us "dummies" simply don't want to learn code!! And you can ALWAYS turn your repeaters off! 'Nuff said. 73's

Not true Mike...
What is ill-eagle is producing too many spurious emmisions. I am a MARS member and am in the process of setting up a shore station for USCGA... have some friends in the auxilary and intend to sign up.

The point is that "ham gear" per se is not illegal. Unlicensed operation, harmful interference, etc is.

On the other hand, a marine license does not cover modifying gear. Anyway, the clear point here (at least my point) is that licensed operation that does not cause otherwise illegal side effects which uses ham gear is legal as long as the construction or modification was also legally done.

To cite my own situation: Yaesu FT920 and a MARS license from the DOD. I got the OOB mod right from the factory in exchange for a fax of my MARS license. If I sold it, I might have a legal problem, but for me to mod it and use it is legal. Which was, I think, my only point. As a matter of fact, I can build or modify a Linear which operates outside the limits for type acceptance AND outside the amateur bands, and it's just dandy with the government.

As you correctly point out, it is NOT legal for me to exceed FCC standards with the radio. However, even if I built it from nothing it is legal for me to operate until it becomes a problem for some other reason.

As an aside, all recent Canadian handhelds that I have dealt with are all marine capable, but you lose the automatic repeater split feature.

The UNIDEN I use on the boat is identical to several other UNIDENS for different applications, and as a ham I could if I chose build one from scratch as long as it caused no harmful interference, etc.

Hope you see what I'm getting at here... type acceptance is required for sale, not use. Compliance and a license is required for use.

I think you are being deluded into believing that what happens here on
this USENET is what also happens in the real amateur radio world. I see
none of what you mention in the real world, only here on the newsgroups.
If you believe all you read on here, they will have you believe either
the sky is falling , or will be turning a weird shade of pink next week.
Or that Y2K is a new strain of flu. Or that repeated use of morse causes
certain brain damage. MK

Adjusting PK-232 LED display...

Hi.

I am looking for the method of adjusting the LED display on
my PK-232.

For contesting I will be using a HAL P38, just installed,
(gives much better performance). But..... The onscreen
tuning bars are much more difficult to align quickly than
the PK-232 LED display. So I am feeding audio to the PK for
tuning purposes only.

The PK-232 display shows the 'on frequency' position about
20-25 hz higher than the HAL P38. Want to adjust the PK
display to match. Any gurus out there that can tell me how
to move the PK display frequency center?

Thanks.

Sounds like your wife is a bit of a snob. I'm glad your married to her and
not me. The above solution is valid, however considering her set in
concrete attitude, it is probably useless. She actually has a point. Hams
are in a rut for the most part. We talk about generally uninteresting
things (especially to non hams). But then so do doctors and lawyers and
other "professionals". All I can suggest is just tell her to get a life and
find a hobby she likes. And stay the hell out of yours. In otherwords, you
got rights too.

97.1 Basis and purpose.
(d) Expansion of the existing reservoir within the amateur radio

SERVICE of trained operators, technicians, and electronics experts.

Maybe she just wants you to turn off the radio in the car when she and the kids are with you so you will pay attention to them. Women have a thing about that, you know.

Meanwhile, what area are you in? We might be able to suggest some repeaters which she might actually ENJOY listening to. Also, how along ago were you licensed?

May I suggest the possibility of irreconcilable differences? My wife shares some of those same opinions but she is gracious enough to allow me some joy in my life. I'm sorry about yours. She must be awfully self centered.

There have been Amateur Radio Operators since before there ever was an FCC. Hams pioneered the technology of radio broadcasting. The purpose has never been hobby oriented, though many seem to thing that's the only thing it's intended for. I agree that the ARRL's proposals to lower or eliminate CW requirements is bringing in a lower class of people to our ranks. This, however, seems to be the only way to build the necessary lobbying power to save our frequency allocations which are aggressively being sought after by other interests.

I also had trouble learning the code but once mastered, it became my preferred mode. I persevered and succeeded in the end and I don't begrudge the code requirement. The demand is steep but the reward is greater.

I am still trying to figure out what all the CW pro/con argument is all about. There are those who enjoy CW and take pride in having that skill just as there are those who enjoy operating high power linear amplifiers. I am in favor of CW and do not use high power but I don't begrudge those with differing opinions. The nice thing about Amateur Radio is that there is something there for every taste. True, CW is considered arcane but it is still the most reliable mode when conditions are bad. There is not nor has there ever been a requirement for hams to use CW if they don't want to. We who like CW consider it a dying art which needs to be preserved if only for the sake of history. If you don't like CW, just don't use it! There are other modes which, no doubt, will satisfy your needs better. There remains the possibility that someone just isn't intelligent or determined enough to develop the skill. Perhaps those are the ones who should try stamp collecting.

I just got my obligatory news brief from the TM organization and they are claiming, as they have since the early 70s, that we can erradicate all human problems by meditating in large groups.

I suggest we try it right now. Ready?

Begin:

(.....)

End.

Nope, it didn't work. Same old shit except now there are 30 fewer seconds with which to deal with it.

This problem has an easy solution: Put an HF radio in the car and tune
into the CW portions of the bands. Then you can practice your code (using
"head copy") and she won't have to listen to the boring phone operators.

on hf marine bands ham gear is illegal. period . to mod the legal marine gear
to do double duty is ok.
the reason is the surious emissions for marine gear is tighter than the ham
stuff.

Hey Gene
I have no idea. I do belive that most of those guys in favor of CW
getting trashed are the same ones that would have us say 10-4 on 75
meters. I myself love CW. I also love CW at 1000 watts out. So you
decide. I just like a good signal on the band. I don't like to have to
repete my self nor do I like other people to do the same. I will agree
with you on one thing if you don't like a mode don't use it! Thats just
my opinion I could be wrong.

Look guys, you/we are all responding to a set of guys who use nothing but aliases and crosspost to every newsgroup with the words amateur.radio in it. All is does is stir the pot and further divide our already dwindling number. This would be interesting reading (ammo) for someone interested in acquiring/lobbing for Amateur Radio Frequency Allotments.

Rules of thumb.

If the poster uses an alias......don't respond....
If the post is crosslinked to a bunch of groups......don't respond....

>>> STOP! <<<

You've all been asked several times already!

>>> Please stop cross-posting to 'rec.radio.amateur.space <<<

AGAIN, if you don't know how to avoid doing this, PLEASE don't respond to
any further postings on this thread.

The issue is being deliberated by the FCC and any further discussion here
is QRM (except, *maybe*, under 'rec.radio.amateur.policy').

-- KD6PAG (Networking Old-Timer...)

P.S. And if you're going to complain about cross-posting, please include
the following line in your header:

Followup-to: rec.radio.amateur.policy

Shoot an arrow in the air, where it falls I don't care. Explain that one to the judge...

You are responsible for where your posts go.. Not me, not your ISP but you.
When one replies to a post (or posts) if they are using any kind of decent software
(Netscape, Agent, trn) you will have TOTAL control over where you post. Just like I have control over the messages I filter out. Type. Click. No more messages.

You would'nt tell the FCC that the reason you splattered over 30kc of the band and had harmonics up to 150 mc was because you didn't know how to set up your rig would you?

Ignorance is no excuse...Learning is a responsibility...

Hans, you did it all wrong. Surely MacLane says to hold hands and look to the East (or was it West?). I don't know. And there was supposed to be an alignment of the planets. Check with her before you try it again.

There should be no such thing as nocode ham ticket as well as no CB we
wouldn't have the problems with all the pirates trashing 10 meters if it
wasn't for CB. I do beleive that the code sould stay where it is and all
the no code guys be give 90 days to get there code speed up to 5 wpm and
1 year to get it up past 12 wpm. Thats just my opinion I could be wrong.

My original post said nothing about the confederate flag. The flag by itself is not an indication of anything much. But add some of the comments, links, wav files, and text that are made by some amateurs on this web page http://www.angelfire.com/ga/3950Opinions and, well go look for yourself and decide. Charlie

To which someone said:
> Cant say as I blame you.

A modern parable:

A small group of hams got the idea of meeting for a few minutes after work every day to chat about their hobby. (Okay, so some of them actually slipped away from work briefly to participate).

Anyway, it was a congenial little group, and a lot of good information was exchanged. Sometimes people asked for and received advice about antennas, operating procedures, or equipment recommendations. At other times, the discussion leaned toward subjects where folks had strong preferences and feelings--the FCC and ARRL being just two examples. Even though the discussions were quite intense, everyone treated everyone else with respect. And everyone got to take a turn speaking his mind.

The group grew. Others guys (and some gals) discovered the group and began to drop by. Not everyone could make it every day, but almost all of them checked in two or three times a week. Not all were licensed hams; some who were working on their tickets began to visit the group for help and encouragement. And the group was more than happy to provide both.

But nothing lasts forever without a challenge. Maybe it was the influence of "Shock TV". A couple of people began stopping in just to see how heated a discussion they could create. Another (and every group eventually gets one of these, I think) did not have much to contribute but didn't want to feel left out, so he began making a comment on EVERYTHING which was said. After while, his comments became complaints and put-downs. Oh, you could ignore these people if you wanted. Problem was, everyone only had a certain amount of time they could budget for meeting with the group.

When the "flame-throwers" started monopolizing the conversation, there wasn't as much time left for the discussions which had brought the group together in the first place and which had contributed to its growth. The core group members dropped some hints, but the monopoly crowd yelled FREE SPEECH and would not change. The other members of the group certainly respected the idea of Free Speech. They just wanted the group to keep its original focus.

Last time I stopped by, some of the regulars told me they were going to quit participating. I hate to hear that. They are among those who have been the most helpful to new comers and who have provided some of the best information to the rest of us. If they leave, they will leave a vacuum. And guess who

will fill it? That's right--the Flame Throwers and Stupid Comment guys.

I'm going to ask my mentor in the hobby about how to handle it. I sure hate to see the group break up over a few folks. But I also respect their right to make comments--whether or not I agree. I guess the problem is that they have become so obnoxious that they are unpleasant to be around.

Meanwhile, it's Friday afternoon and I'm sitting at the "watering hole" waiting for folks to arrive. Whatever I'm drinking, Joe, slip me another one. Not so much ice this time. Thanks.

>

Odd. I've never heard of a Morse code certificate. Morse
code is one of the required skill sets required of those
obtaining most ham radio operators licenses. That's what I
was referring to. People who are motivated to become
licensed amateur radio operators and who wish to operate
widely on HF learn Morse code and whatever else is required
to obtain the license. Motivation-spurred by desire, *IS*
the keyword to success. If you "don't want to" - well, you
just "don't want to".

Looks like Cecil is saying that a Morse code qualification
isn't a requirement. Or that a Morse code requirement isn't
a qualification. Either way he's confused.

While there are mathematical and formulaic answers to your question, the
real answer lies in practicality.

Practically, yes, another 5 feet will probably help at those freqs. If you
are going to spend the extra 30 bucks and go to the trouble just for 5 more
feet, forget it. But, if you are going to work on the antennas anyway, go
ahead and do it.

This program is great! After trying to get many popular
Morse programs to work on my system (PII 300), yours is
the ONLY one that works (the others would cause the sounds
of dits and dahs to bleed into each other). The configurability
and user interface is perfect.

Thank you for a fine program,

Yaesu FT-840. Very low hours. In original box with original packing,
microphone and manual. Stock filters only.
Checked and working fine.
Only mark I can find is a very faint one
about an inch long on the bottom cover. Will probably rub out.
Otherwise looks brand new.

$575 (firm) plus shipping from 78728

Prepayment or COD requested, positive references available on request.

How many horses do you meet up with on the road? I do dislike inappropriate comparisons.

The question is not one of making it licensing easier, but relevant. I am for more stringent technology side testing, actually show a working understanding of what you are operating. That in itself would probably spurn more CW use than the hazing requirements.

The one thing I have noticed about learning to copy Morse Code is that you try to make it a reflex action, i.e. turn your brain off.

CW should be just one section of the testing not a full requirment. That is if you got most of the rest of the exam correct you could pass if you failed on the code section. Every thing else is this way. Why should CW cause you to fail? I think station operation is more important than CW.

I am a tech class operator and have been trying to get involved with some ham radio clubs in my area. I happen to love radio and ham radio etc, The problem is my wife when the kids or anyone else is in the car will not let me listen or
talk to anyone because she calls us a bunch of low lifes. She says from what she can hear that we have limited vocabulary and talk about the same things over and over again. She said she is embarrased by the whole ham scene. I really would like to straighten this out with her. I am a professional person and have tried to convey to her that its just a certain segment that she is hearing
There is good and bad in any hobby. Her claim is that none of these so called hams work just talk boring nonsense on the radio all day. She is really on my back especially when I get new catalogues like from HRO etc and I talk about buying more equipment. At this point I dont know what to do I want to go to Daytona but I am sure I will have a problem with her Have anyone of you ever faced this problems yourselves. You would think we were criminals or something I should let her listen to the shit on Channel 19 on 11 meters and then she would
here something HELP PLEASE ANY ADVISE

If you really have to build one, the circuit in the ARRL handbook works and it shouldn't cost more than $20 to put together. You can learn something about display drivers etc. by looking at the circuit.

I have a "formerly" expensive HP model that I purchased used, and a radio shack portable model. Interesting, the RS model will interface a PC and it was about $80 when I bought it and they are a lot cheaper now. It's a matter of whether you want to invest time or money.

Mmmmm - a similar discussion about amateurs and sex lives has taken place on
the uk.radio.amateur group.

: She says from what
: she can hear that we have limited vocabulary and talk about the same things
: over and over again.

Remember that revenge is sweet - i.e. record her hour long phone calls to
her mother/sister/friend this week, then record the same conversation next
week. When she says you talk about the same things, play her back the tapes
and you'll find that she talks about the same things over and over but on
the phone.

If she doesnt want to listen in the car, get yourself an earphone. If all
else fails, buy her a car and driving lessons.

I agreed 100%, and I'm all for microbroadcasting. I'm hoping to be able to start one as soon as the FCC will allow it. I also think I could do it w/o their permission; they don't have any authority over INTRASTATE affairs (I've been doing my homework), but I don't feel like getting into any legal battles right know.

I think this debate rests clearly on ones desire to pursue and advance through the license classes to eventually utilize the bands that a particular license class allows. If an individual (like myself) has no desire to enter into the H.F. arena, then why should that individual be looked at as a "lesser" individual.

I applaud those who painstakingly worked their way up the license ladder to acquire skills that benefit them in pursuit of their hobby. However, what Ive found after re-entering this hobby after a long hiatus is that there is a level of animosity prevalent today, with regards to individuals who possess lower class licenses, that wasn't as present just 10 years ago. This opinion could be solely mine, however, it seems that 10 or so years ago more upper class license holders embraced lower class license holders in order to create the motivation for the "apprentice" amateur to pursue a higher class license.

What Im now reading on this NG is that some individuals feel that they should either belittle, embarrass or bully lower class licensees into acquiring more skills (e.g. CW). I truly believe the *motivational approach* (show them the benefits of what they can have and how they can use it) rather than the *hostile approach* (belittle them into either getting out of the hobby or going out and 'learn code like the rest of us"), is clearly the path to longevity of the hobby.

Ah, you're not there yet. When you get to where you begin
to hear short words, you turn your brain back on, open up
the mental bandpass and start listening for complete
words....you might be surprised how soon you're hearing
conversations without writing down a single character, at
speeds you'd never have expected.

While you are busy "pounding at the key", I'm out helping people put up antennas, up towers to install antennas, assist in times of disaster, donating to area repeaters, operating in packet mode (which kills cw by far), attending club meetings, attending theory classes, and of course, talking on the rig. So, why am I lazy, just because I don't see the need for cw or want to learn it?. I'm in the hobby for advancing my technical expertise and public service. The whole CW argument is crazy. Let's see if we can get the FCC to make learning how to operate in packet mode a requirement for getting a license. Since most hams use computers and computers are running everything anyways, make it a new requirement. For those of you whole love CW, my respect goes to you. I have a good friend who I have had the privilege to see operate in CW, and I was mystified and I will probably learn it so that I can upgrade. I'm not trying to slam CW, just don't enjoy being called lazy.

Dear Bob,

I won't requote any of the post simply to say your points are well taken and well stated.

But from the point of a person who was constantly having to overcome some of the assinine radio compost that was coming from West's "schools", I can only say I speak from experience.

His intentions may be sincere, but I believe that sincerity is to make his nest egg and to hell with how the omlet turns out.

As I said to another poster, I hope the demographics of many of the SoCal repeaters has changed, but I am glad to no longer be living there, and to no longer hear the lament "But in Gordon West's class, he said...."

She is right (to a certain extent). Same thing can be said for
electricians, plumbers, Doctors, lawyers, and Indian Chiefs. Ham radio
is merely a small part of our society....they have just found a
different medium in which to communicate.
I
> There is good and bad in any hobby. Her claim is that none of these so called
> hams work just talk boring nonsense on the radio all day. She is really on my

"Boring nonsense" is a subjective term. She could be listening to two
hams talking about setting up a UHF repeater complete with controller
and voting repeaters and to her that would be boring....to me, I would
be listening very closely. However if two hams were talking about
biscuit recipes, I would find that boring.

ver
> faced this problems yourselves. You would think we were criminals or something
> I should let her listen to the shit on Channel 19 on 11 meters and then she
> would
> here something HELP PLEASE ANY ADVISE

I know in this area, certain groups of people "inhabit" certain
repeaters and generally tend to stay there. I tend to hang around a UHF
repeater where the guys on it are pretty technically oriented and we
talk about technical stuff all the time. I have heard other repeater
systems where the people act childish, vulgar, or are constantly making
juvenile innuendos, thinking they are cute. Some of them just sound
like a high tech version of 11 meters. Needless to say, I don't spend
much time on those frequencies.

Perhaps try to locate some repeaters where the topics of conversation
might be more of interest to her, where the people conduct themselves in
a professional and polite manner on the air.

You may never "win" her over but perhaps she might be able to tolerate
it.

My wife tolerates my radio but when she objects, I have the luxury of
telling her, "Well I was a ham operator when you married me."

Good luck,

Andy

Yeah, well I had a QSO with a Extra who hooked a HTX202 to 120 feet of wire via 80 feet of RJ58. He had a "1 to 1 match" and was located in Cleveland (250 miles away) so his antenna just had to be working. Never mind he was on the wide area repeater (good thing the HTX figured out the offsets for him) which had a receive site no more than a mile away from his QTH. That RG58 can make a great dummy load.

Yeah, that extra 15 WPM really taught him well.

It works both ways. Has nothing to do with the code.

Lets drop this ridiculous thread.

Christopher Cox
KC8FRJ

BTW, yes he burned up his batteries because he had to be in high power to hit the link.

I was wondering if any of you who read this NG have had trouble with the large, backlit Kenwood mikes which ship with many of their newer vhf/uhf rigs, notably the TM-261A. Several hams around here have had intermittent ptt problems with them and asked me to post here to see if there are others experiencing the same thing. Kenwood denies that there is a problem so hopefully a large enough number of responses might get them to change their tune.

You must have your extra class license, otherwise why would you be so condescending. CW is not the hobby! I feel the more hams the better! I like the fact that CW is a barrier that separates privileges but it does not have to be the only way we separate privileges. We need to get more people into the hobby. How do we do that, by taking privileges away? I think we need to let more people enter so that we get more utilization of the bands. ARRL is not screwing the hobby, I believe they are saving it. When was the last time you lobbied congress so that you could keep the existing frequency allocations? The FCC would like nothing more than to auction off another block of spectrum. We need to be strong, unified and consistent in our approach, the ARRL is our voice(your voice to). I would rather have 100 new hams enter the hobby than keep one CW operator who can send and receive CW at 20wpm with a straight key. So let them in, you could teach them CW and they could teach you how to spell.

6028. Ten-Tec 1340 QRP Kit - One Builder's Opinion

Newsgroup: rec.radio.amateur.misc
Date: 1999-03-13 00:00:00 UTC
From: dber@tiac.net
Message-ID: <36ed8672.13854777@news.tiac.net>
Source record: 148234

Well, I saved up my $95 and purchased the Ten-Tec 1340 40M QRP Kit. I wanted to try something other than 2M and wanted to try my hand at building a kit project before moving on to more homebrew equipment. The kit was reasonably priced and the ordering and shipping went very smoothly. It arrived at my doorstep in 4 days.

On first inspection, the kit was impressive. It came with a nice 75 page manual in 2 sections - one for component data and overview and the bulk of the rest for detailed kit building. I dug in right away and read through the manual twice before beginning (highly recommended). I then started by counting each piece (they give a nice checklist) to make sure they gave me the correct parts and that I had all parts required. This read-thru and parts check took about 6 hours (OK - so I was very careful... but better safe than sorry).

The actual kit building took place over the next 6 days - about 4-5 hours each evening. I estimate the kit took about 35 hours in total from start to finish. I'm sure I set no speed records and an experienced builder might finish in less than half the time but a newcomer who knows how to solder and use a multi-meter should do as well as I did.

After each phase, there are test points which were very helpful. My only concern is that you need another receiver or frequency counter to test and align the rig - something they didn't mention (or I didn't see) in the literature. No big deal, borrowed a frequency counter from work and was able to use a shortwave receiver for additional final tune-up. You can get away with just a receiver but the frequency counter seemed more accurate. Had a bit of trouble with the transmit mixer test - the frequency counter showed jumpy values but the receiver method worked fine and later I checked it with a friend's oscilloscope and the output of the transmitter looked clean.

As for the kit building itself - the only tricky part was winding the coils which took almost 2 hours to wind all 5 coils. The main VFO is 32 turns around a toroid the size of a nickel... I've never done it before but it turned out fine. The VFO I wound for the rig covers 70KHz of the 40M band (50KHz of which I have privileges on). Was very pleased at the tuning control although it does not appear linear - the bottom half of the tuning covers much less frequency range than the top half - no big deal. They also provide RIT tuning for fine adjustments on receive while keeping your transmit frequency on the mark. The finishing hardware (case, knobs, rubber feet, jacks, etc) are all excellent and the unit looks great. The audio seems fine and the supplied filter works well for CW.

As for drawbacks - the manual turned out to be not as good as I would have liked. Near the end, the final assembly is left mostly to the imagination - they take short steps and skip some steps. Also, the heat sink had the drill hole (to attach the RF power transistor) on the wrong side! I had to drill another as best I could and it seems fine. There were a few other minor problems with the manual - some of which I marked up in my copy but it escapes me what they were. Mostly it left some doubt as to what the "correct" method was to do something (like the SO239 connection) but these were fairly minor in light of the overall details they did provide. There were some frustrating moments during the middle when a test would not go quite right and they could only provide "please check all your work" in the manual. I think with some additional effort, they could add a few additional things to look for - common culprits for each section or additional test points when a large stage is finished but not working as expected. Still, the one time I called their tech support they were helpful on the phone.

Using a RF Wattmeter, I peaked the output power at just under 4W although the specifications claim 3W nominal (but up to 5W possible with proper voltage and proper coil adjustments). In the first week or so, I had 10 contacts with my 40M dipole strung a few feet above my yard. The furthest away was almost 1000 miles west! Also talked with one other Ham with the same QRP Kit I built - not bad. I'm sure some will laugh at 10 contacts in 1+ weeks but I am still having some early trouble with copy above 5WPM.

In the end, it turned out to be a bit more than the $95. I had to get a straight key ($11) and a RCA patch cord to connect the rig to my PS and key ($3 for 2) so the total cost was closer to $110 but this is still a bargain with the amount of enjoyment I've had for my first time on 40M. Although there were times during the building that I was frustrated, I would consider building another TT kit (They have 40M, 30M and 20M kits now, 80M coming next month?!? and 15M coming in the summer which I might consider since I have privileges on 15M).

So, in short, the Kit was well worth it. I got my money's worth on the first contact! Even just seeing the unit receive clean signals was a thrill. For what it's worth, I'll recommend this one.

>vhf/uhf rigs, notably the TM-261A
i believe you will find (if you open the mic) that the problem lies in a small piece of cellular rubber between the ptt knob that you depress with your thumb, and the actual microswitch which is supposed to be depressed by the rubber insert.
apparently this insert is or becomes too soft to maintain pressure on the microswitch.
you can easily remedy this yourself by either inserting something small and thin enough between the rubber and the microswitch, or replacing the rubber insert with something just a little harder and therefor dpresses the microswitch more reliably.

6032. ARRL Radio Designer -- Questions

I teach college courses in beginning electronics and I need a good introductory RF design tool. I've been told that (a) the ARRL program is excellent and (b) the ARRL program is trash. Before plunking down $150 for another CD coffee coaster of useless information, I'd like to play with it for a while. (Please, no personal rants. I've been reading the threads for a while.)

Anybody got a site where there is a demo, crippled, or otherwise "play around" version of the program to see if it will do what I want? I don't mind the $150 for a decent program, but my disk storage box has far too much garbage software that cost far too many $$ to keep playing that game.

Happens all the time. Many of these folks have not only written off ham radio and tossed away their licenses, they are also vigorously OPPOSING anything having to do with ham radio and have thrown their support behind the commerical interests who which to take possession of amateur frequencies. Does this scare you? It should. What goes around, comes around. Guaranteed.

Your being from Missouri and having lived in Kansas I am sure you have been exposed to the history of the region. I have not lived or visited either. However from my readings of the Northern and the Southern version of the results of the so called "Missouri compromise" I can understand why your heart is in Dixie. I have made it a project of mine to study and learn from accounts written by both the Northerners and the Southerners. It is almost like they lived in two different era's. I intend to return to my chosen home, below the Mason Dixon line, and do what I can to help preserve the traditions of a great nation. The confederacy.

An interesting but cowardly tactic has surfaced.
those whose arguments can not stand the light of
attempt to silence the opposition. Interesting?
Kind of like saying, "I'm going to go to 3901 an
jam Porky HO HO" only this is the internet
version.
But gee even though the attempt was unsuccessful
obvious and dishonest I have access to computers
and services from several sources.
My normal access is for convenient and enjoyment.
But not my only resource.

What is interesting, Rob, is that Len Winkler, host of the "Ham Radio and More" radio show, suggested on his show and on this newsgroup years ago that a slow-code general license be created such that if a tech+ could pass the general, advanced, and extra written exams, he would be awarded a 5wpm general class license. I supported it but the PCTA rejected it. Now under the proposed ARRL plan, generals will not be tested to anywhere near the technical level that was rejected by the PCTA previously. Poetic Justice?

Greg,

HRO on Iliff Ave in Denver usually has brochures on all the local hamfests. There was one in Castle Rock today (just got back from it). The next one in the area is in Monument at Lewis Palmer High School on May 1. The LARCFest (Longmont) is coming up soon too. Stop by HRO, they have all the brochures.

I just returned home from my first ever hamfest. This is what I bought

1) Motorola police type speaker mic, works and looks great: $5
1) Shure 527T hand mic, as above: $5
1) Shure 444 desk mike, $5
1) MFJ R-X noise bridge, as new: $6
1) 12V 10A switching supply from computer gear, $6
2) 12V 2.4 aH nicad battery packs: $2/pair
12) National and Hammarlund air trimmer caps, approx 100pf, nice: $3 lot

1) Ameco new, in plastic bag, straight key: $1
2) 12VDC 4" muffin fans: $2/pair
1) Hallicrafters HT-40 transmitter, very clean, $20
1) Drake 2-NT transmitter, manual, no tubes, pretty clean: $15
1) Simpson VTVM, works, looks good, with probes: $5
50) assorted crystals: $12.50/lot
100, approx.) assorted used tubes 6xx#, 12xx# miniature, sweeps, plus 4 807s, 2 813s, 7 6883s, 1 6L6, 3 6V6, and several gigantic, unmarked ballast or rectifier tubes: $30/lot

TOTAL: all this good stuff for $117.50, no tax, no shipping, no waiting for packages; but lots of fun. Bye-bye eBay and USENET for sale boards! The net is for sellers, it ain't for buyers, except the dumb, spendthrift, or excessively rich. I figure that via eBay I would have paid, conservatively, over $500 *plus shipping* (another $50-$100) for what I bought, all of it very useful and desireable, class-A1A American Junque!

I passed on or missed a *lot* of other deals and steals, as I got there half-way thru the event, which is the lesser of the 5 regular annual swap/fests around here. Real people, not 'net-buddies' (related to 'teletubbies'?), sunlight, conversation ("what the hell is that thing?" "I dunno, lets ask him." vendor: "I dunno, I bought it at this meet three years ago, I haven't a clue what it is, but I'll let it go for $10.")

Ft. Tuthill 5-State Hamboree, here I come!

Really now, this isn't even paranoia: it's silliness. First, the part of the ham population that is that hostile and petty is small, and confined to known quagmires. That has been my experience. I'm a friendly guy and welcoming to new hams, as is the norm in my area. Who knows, maybe were out of touch? Second, if someone chucks the whole hobby based on one sour encounter, that's pretty unbelievably bad decision making. Third, if such ex-hams are out there conniving with the Iridium, mobile data, and like commercial folk, that is vindictiveness taken to a new height.

You got some DEALS, Will.....good work! And you're right about "real people". One of the great things about a ham fest is that we come out from behind our microphones, keys (gasp) and keyboards and meet face to face.

It's always good to remember that there is a real person at the other end of the circuit.

K5PF
P.S. How did you get that stuff into the house? My wife put up one of those detector devices like they have at the airport. I have to pass through it when returning from hamfests and swap meets!

It doesn't look like any of the several other responses are answering your question, so I'll take a stab at it.

The ARRL program is a limited version of Super-Compact, which is an industry standard frequency-domain modeling program. I personally feel that the interface could be more intuitive (this comment applies to Super-Compact as well, whose interface is identical), but the program is very powerful and a terrific bargain for the money. I don't know of any program which comes anywhere close to its capabilities for anywhere near the price. I suspect that anyone calling it "trash" doesn't have an appreciation for its capabilities.

I'd also recommend getting the demo version of PSpice. It's a time-domain oriented program and is likewise very powerful. And it's free.

Roy Lewallen, W7EL

I agree with K5PF, hamfests are too much fun! I thought I lost out when I moved to South Carolina from Florida. We had some great ones in Florida. But there are super ones here too!
The only observation my family makes now, since they accompany me on these trips, is to ask, :If you knew what these guys looked like, would you be talking to them???" I have to admit, with all our antennas and pocket calculators (yes, I saw one at a hamfest today) we do look odd. But at the same place was a meeting for woodworkers. Now, there is a strange bunch. Carrying planks of wood under their arms and talking about bandwidth.
Ham Radio is great because we are so diverse.

Source record: 148287

ZCZC AG16
QST de W1AW
ARRL Bulletin 16 ARLB016
From ARRL Headquarters
Newington CT March 12, 1999
To all radio amateurs

SB QST ARL ARLB016
ARLB016 Low-frequency Experimental license issued

The FCC has granted a one-year experimental license to the Amateur Radio Research and Development Corporation--AMRAD--to conduct tests on 136.75 kHz. Experiments would be carried out from 12 Northern Virginia sites using the call sign WA2XTF to gain low-frequency experience in anticipation that the FCC may allocate an amateur band at 136 kHz.

Emissions authorized for these tests include 173-Hz and 450-Hz bandwidth frequency-shift data and 100-Hz bandwidth CW. The authorized transmitted power is 1 W ERP. The 12 stations will operate experimental transmitters, antennas and receiving systems using digital signal processing techniques.

Participating in the experimental operation are Glenn Baumgartner, KA0ESA; David Borden, K8MMO; Robert Bruhns, WA3WDR; Hal Feinstein, WB3KDU; Terry Fox, WB4JFI; Andre Kesteloot, N4ICK; George Lemaster, WB5OYP; Shannon Mishey, N8TBM; Paul Rinaldo, W4RI; David Rogers, K9RKH; Elton Sanders, WB5MMB; and John Seely, AA4GM. Rinaldo is the ARRL's technical relations manager.

While the list of stations is closed and new transmitting stations cannot be added, others are invited to join the project by listening and reporting results. Reception reports should be sent via e-mail to Andre Kesteloot, N4ICK, n4ickamrad.org.

Last October, the ARRL petitioned the FCC to create two amateur LF allocations at 135.7-137.8 kHz and 160-190 kHz. Several countries throughout the world already enjoy LF allocations around 136 kHz. These include New Zealand, Great Britain, the Republic of Ireland, and several European nations.

Further information concerning these LF experiments will be available on the AMRAD Web site, http://www.amrad.org.

Bob,

I proposed exactly that. See my article on the nocode wed site:

www.nocode.org

Cheers,

Does your have any hobbies she likes that you don't? If so start bitching at her about them. My wife isn't interested in ham radio but she sure doesn't tell me I can't. If she likes something and I don't that's ok too. It's called live and let live, unfortunately some women (and men) just have to have something to bitch about to thier mate.

>save our frequency allocations which are aggressively being sought after by
>other interests.

Nonsense, Gene. The only bands in danger can already be accessed
with a no-code license. One could go so far as to say that the
no-code V/UHF license has failed it's intended purpose.

Lowering or eliminating code for HF privileges won't save UHF and above.

Please abide by the followup line so as to remove this thread from .space.

Correct. Fred, W5YI, is free to propose anything he wants via
any medium he wants...BUT NOT through NCI. NCI
policy and proposals must be agreed to by the NCI BOD of
which Fred is but one (1) vote.

If there ever is a No Theory Int'l, you won't see
me involved in support, but you will see me actively
opposed.

That is shown to be BS by the stuuf you quoted Hans. Putting
more of the toery materail in the "Higher" level exams is not
elimating it, therefore is not your "NTI" BTW since you amoug other
always seem to be dising W5YI as out for a buck and the "evil genius"
behiond NCI why does NCI support fewer classes of licence, after all
the more classes the more study guides he can sell.

Very well Put, Dan

I believe like you do, I was born in Missouri, lived in Kansas most of my
life, moved to Iowa - hated every day for 6 and half years. I came to visit a
friend down here in Alabama, fell in love with the place. I moved here in
Febuaruy and loved it ever since. These "Yankees" need a attitude adjustment.

BTW, I will try not to bother you in this newsgroup in the future.

Lloyd

I don't know why they don't just form an umbrella
organization that would encompass all the others, and have
done with it.

Call it NBAAI - 'No Balls At All International'.

Alan,

Morse code is nowhere near death. The bands are packed with it daily. What
may die is the Morse code tests.

Or are you advocating the elimination of Morse code on the Amateur bands?

Kevin,

Do you have a ticket? If so you're a ham. The fact that some folks don't see the Technicians as hams does not make it true. If you're happy being a Technician and are having fun--who cares? If you want more, hit the books and upgrade...or you can sit back and see what the FCC decides to do. Of course, if you wait long enough, you'll miss out on this solar cycle.

cruel, hate filled no-coders? Sir, I am a no-coder and have every intention
to upgrade. I am a good guy. I give everyone just as much respect as they
give me. I don't know about how most no-coders treated the higher-class
hams, but as I recall, it was the general class and above who called
no-coders names on the air, and wouldn't even talk to them because they were
no-coders.

6088. Hams as Low Lifes?

Newsgroup: rec.radio.amateur.misc
Date: 1999-03-13 00:00:00 UTC
From: k5pf@aol.comPaul
Message-ID: <19990313065232.05846.00000042@ng34.aol.com>
Source record: 148310

I believe we have been trolled once again by a non-ham. Nevertheless, some good suggestions came forth which might help some of us preserve our relationships with spouse/children.

If you're driving with wife or kids in the car, be considerate. They don't know these people on the radio, and they probably don't understand (or take an interest in) what is being discussed.

Remember, their primary communications experience with unseen parties is the telephone, so they think you are hanging on every word that comes out of the speaker. Either they will not want to interrupt the "conversation", or they will be offended that you prefer the radio over their company.

Shut off the radio when others are in the car. Spend time with THEM. Your children will love you for giving them your full attention. And your spouse....well, let's just say it will improve your *social* life dramatically! (wink).

a) Deciphering the quotes in this thread is getting as hard as catching calls in a CW pileup

b) fear not, thou aging baby-boom fist. I was born in '62 and am just getting the morse bug now. I know of two hams younger than me who I have personally 'turned-on' to the code. All is not lost. Just watch. As soon as the code tests are eliminated or drastically cut back, a CW nostalgia movement will pop up among hams under 40. I'll bet you 8-5.

c) a 'no-code' license does not automatically mean the licensee is anti-code.

Really? It would be interesting to re-read the (pre-rrap) comments filed
with the no-code Technician NPRM. I'll bet you would find belittlement,
falling skies, and certain brain damage. I was even told that code is a
filter to keep out the "riff-raff." 73, Brian/N0iMD

Jeff, would you agree that many HF oriented hams also use VHF and UHF? Why
would it be any different if we got more hams via a slow or no code license?
You are saying that a ham that takes advantage of a different licensing scheme
won't use VHF and UHF. Please think about it.

Hello Mark,

I dont know where you are located, but if you listen to 1.25, 2, 10, and 12 meters up here in New England, what you'll find are the same exact sentiments as those posted on this NG. I personally know a Tech who just recently threw his newly acquired license in a woodstove because he, originally coming from the CB hobby, made the mistake one night of asking an advanced class license holder what his "20" was. Several individuals (friends of the advanced amateur including the advanced amateur) then decided to pounce on him belittle him on the radio. These events took place during a "Net" of which one doesn't have to guess how embarrassing this was. After spending a few weeks looking for another frequency to modulate on, and not being able to fine any locals, he gave up.....

I truly hope this exact sentiment is not prevalent where you are located.

I am an A/E and a suporter of code.Yet I support the current structure. The no code techs and the 2 meter syndrome is fine. The code does not keep the CB mentality on 11 meters.In fact most of the Jamers and goofs are either general advanced or extra or friends and relatives with no ticket. The strucure is not broke so lets not fix it.

The fix is Hollingsworths efforts and hopefully some heavy fines ,some tickets pulled and equipment confiscation.

It is an honor to serve in the thin blue line that separates civilization from total brabarism P.I.G. power

I think that they've switched to LEO store and forward satellites for
ocean buoys. Last I heard, the US Hydrological Survey still uses
meteor burst to report snow pack thickness from remote sites.
The stations run about 100 watts (burst), and operate just below
47 MHz. That'll probably switch to LEO too in the near future, if it
hasn't already.

Source record: 148132

Washington (DC) March 12--The FCC has been asked to investigate a subscriber to America On Line as a source of illegal operation in the Amateur band. During the past year, a number of postings by this individual have been made in the Internet Newsgroup rec.radio.cb, advocating movement by Citizens Band stations into the lower portion of the 10 Meter band.

Amateurs filing the complaint to the FCC maintain that, while this is not the only source of pirate operation, it certainly contributes to the inaccurate belief that the frequencies above 28.000 are "vacant" and can be used without penalty. In the complaint, Amateurs quoted the posting below as an example of this individual's efforts to disrupt CW, Digital, and weak-signal work by Amateurs on and near this frequency.

Meanwhile, Amateurs around the country are maintaining close contact with key people in the trucking industry to educate them about the problem and to enlist their support. The majority of truckers and trucking companies contacted thus far have expressed support of spectrum management and adherence to communication rules. "We are impressed," said one Amateur, "with how many Truck drivers are hard-working, law-abiding Americans. They would not willingly break the law, and once they are informed, they agree to move out of the Amateur band immediately. It is unthinkable that this sick individual would spread deliberate falsehoods via the Internet to get these family breadwinners in trouble with the law."

Yep, K5BLB is back to his old tricks again,
i.e., blatantly and illegally jamming an
ongoing QSO on 3950.

At 01:21 UTC (20:21 Eastern), K5BLB and
KK7HO suddenly started QRMing a QSO that
had been going on for a few hours. They
are still trying to jam the QSO as I write this.

K5BLB is so damn jealous of the Liberty Net
and it's associated hams, he willingly and
blatantly tries to prevent the Liberty Net
from operating on 3950 by jamming the
freq.

HEY MISTER HOLLINGSWORTH .....
DO YOUR DAMN JOB AND PUT AN
END TO K5BLB'S ILLEGAL PRACTICES!

Actually, many truck drivers are now moving to the lower end of the 10-meter ham band in order to get away from all the noise and agitators on Channel 19. According to what I have read on the ham radio newsgroup (rec.radio.amateur.misc), 28.085Mhz is the new frequency-of-choice among those having capable radios.

David

You have had lots of replies but I will add mine anyway.
Counters are a bit more expensive in Oz so I might be inclined to build my
own.
Look at Elektor UK Jan 1998. There is an article by Eamon Skelton
describing a PIC micro based counter which is quite simple. As a bonus it
will stabilize a free running VFO with a PLL "huff and puff" circuit . It
uses 2 chips (74HC series) as squarer/prescaler and the PIC itself does
most of the work and drives a cheap LCD display (about US$20). The only
other chips are a regulator and opamp for the PLL if you choose to use
this. Of course you will have to buy a programmed chip and a PC board from
Elektor if you want to do this.
I have a similar circuit using the Atmel AT90S1200. I have got a prototype
going (it works!!) and need to tidy up the design to allow user definable
offsets (up to 8 selectable offsets which can be user programmed using
pushbutton switches). It also has automatic lockup ( ie no switch to lock).
If there is interest I might be able to get a batch of boards made. I would
envisage the controller/PCB together would cost about AUS$40. E mail me if
you are interested.

Richard

Lauri,

I just bought an ADI rig and modified it for my armed forces needs. It goes to 130MHz as advertized...are you sure you did the mod and re-boot appropriately?

Turn the radio up-side down (with the power off, of course) and snip the yellow wire that is there...it's the only one there, so you cant miss it).

Close the radio up again and hold the "VFO/Memory" button as you turn the radio back on. It shoould now be rebooted for coverage all the way to 130.

Actually, many truck drivers are now moving to the lower end of the 10-meter ham band in order to get away from all the noise and agitators on Channel 19.

According to what I have read on the ham radio newsgroup (rec.radio.amateur.misc), 28.085Mhz is the new frequency-of-choice among those having capable radios.<<<

Which is really pretty stupid since the FCC hardly has the resources to engage in a wholesale enforcement of Part 95 regulations, but given sufficient compalints and the opportunity to use other federal confiscation laws, it won't be too long before "chicken coops" also have an FCC inspector there with a Federal Marshal to start pulling them out of rigs on the spot.

There is plenty of room below 28 MHz to have a freeband QSO. Promoting a QSO on Amateur frequencies is like waving red in front of the bull...yoou're just asking for trouble...ask the maverick cab drivers of NYC!

In an effort to get the brain cells working consider the following question:

Assuming the Earth was a perfectly smooth sphere (as if it were all water), how high would one have to make an antenna to reach a maximum signal distance for a "Line of Sight" signal? In addition, assuming it were possible to do so, what would be the radiowaves total distance traveled in miles at the furthest receiving point, assuming the receiving station had an antenna on or near the ground?

Good luck and 73's

Okay, "Yrac"...since you seem to want to continue this foolishness...and since you still have not answered my previous question regarding your source for this supposed "article", let me answer your statement piece-by-piece:

>Washington (DC) March 12--The FCC has >been asked to investigate a subscriber >to America On Line

On what grounds? The FCC has no jurisdiction over the Internet in general, nor over USENET postings in particular.

>as a source of illegal operation in the >Amateur band.

Again, on what grounds do you base this? How does posting to an Internet newsgroup equate "illegal operation in the Amateur band?" If you are incinuating that I have engaged in illegal radio operations, you better have some proof to back up your allegations.

>During the past year, a number of postings >by this individual have been made in the
>Internet Newsgroup rec.radio.cb, >advocating movement by Citizens Band >stations into the lower portion of the 10 >Meter band.

I have "advocated" no such thing. I have simply commented on what is happening. Yes, there ARE illegal out-of-band CB stations operating on the 10-meter amateur band. I am not one of them. I do, however, exercise my First Amendment rights to discuss such operations on Internet newsgroups, as do several others.

>Amateurs filing the complaint to the FCC >maintain that, while this is not the only source >of pirate operation

You are again suggesting that I am involved in illegal radio operations. This is not the case...I am not a "source of pirate operation", and I strongly suggest that you cease and desist from making any future implications of this sort in the future.

> it certainly contributes to the inaccurate
>belief that the frequencies above 28.000 are >"vacant" and can be used without >penalty.

I have never stated that these frequencies are "vacant and can be used without penalty." I have simply commented upon the communications which do take place here.

>In the complaint, Amateurs quoted the >posting below as an example of
>this individual's efforts to disrupt CW, Digital, >and weak-signal work by >Amateurs on and near this frequency.

Commentary upon activity = "efforts to disrupt?" That's a pretty big stretch, don't you think?

(Yrac's posting related to truck drivers and illegal communications deleted in the interest of brevity)

>
>"Where's that big 'ol CB RAMBO??"
> "I wanna hear him TALK TOUGH!!"

Again, simply commenting on what I have monitored and what others have commented on this newsgroup. Of course, communications on this frequency are illegal in the United States unless you are a licensed amateur radio operator with the proper class of license. However, several professional drivers ARE in fact licensed amateurs and carry 2m and/or 10m equipment in their vehicles. In this case, communications on the frequency in question would be completely appropriate and within the laws of the Federal Communications Commission.

If you have a problem with illegal operations on the 10-meter amateur band, I would suggest you devote your energies to removing the unlawful operators, rather than attempting to place the blame for their activities on an Internet newsgroup poster. How ridiculous!

This is correct. I have personally monitored what appears to be over-the-road truck drivers, engaged in conversations on 28.085Mhz. I have also read comments on this newsgroup, posted by others, which suggest the same.

Please state on what legal grounds you feel either the FCC or my ISP should "investigate" or "take action" against me for stating my observations on an Internet newsgroup.

>Roy Lewallen, W7EL

First, let me state that I haven't actually *used* the ARRL's
limited version of Super-Compact. The primary reason
is my understanding that it doesn't do non-linear, only linear
simulations. This is a limitation that had caused me to not
spend the $150 for the program.

Spice, on the other hand *does* do non-linear analysis
and seems to meet most of my needs.

A fancier, more capable program is Eaglewage "Genesis"
from, surprisingly Eagleware :-) It's a lot more expensive
than ARRL radio designer, but a lot cheaper than Super-Compact.

If you budget is limited, there are *free* Spice packages out
there for the WIN32 environment ... check the web with a search
for "free Spice" or "CAD tools", etc. and you should find several
to choose from.

I will second Roy's comments. I was waiting in line when
ARD was announced. The original version had a few bugs and
minor deficiencies, some of which I reported to ARRL. Dave
Newkirk was then the "guru" and somewhere along the line he
suggested that I talk to Ulrich Rohde, President of Compact.
I was very pleasantly surprised that Ulrich took my phone
calls and agreed to some of the changes that I suggested.

Version 1.5 fixed the problems, although, I was dismayed
that, because I had an "old copy" of v1.0, I was expected to
pay for the "ungrade" that corrected the problems that I
reported. This minor problem was worked out, however.

Unfortunately, Newkirk left ARRL and I believe gone to work
for Rohde, who has since sold Compact to ANSOFT, so further
support for ARD is problematic. Jon Bloom at ARRL is in the
support role there, but the future life of ARD is
questionable. There was a ARD reflector, but that's gone
bye bye, as has the QST column, "exploring rf."

Still, for 150 bucks, it's a bargain.

Disclaimer: The foregoing is my opinion and my recollections
of past events. Time and an increasing feeble mind may have
altered the reported events. <g>

And I'm happy they are no longer around, if they are willing to toss in thier license because someone on the air got short with them then they're probably in the wrong hobby to begin with. Rather than learn about radio and seek others who share the same interests they look for immediate acceptance by everyone, sorry doesn't happen. You don't go to a nightclub and expect everyone there to be your friend, why would you expect the same on the air? No Drew it doesn't scare me the amateur community is strong and with recent changes in the FCC enforcment it will only get better. The funny part is how the doomsdayers, like yourself, profess day after day how the hobby is dying based on testamonials like the one above. Keep up the good fight Drew, unfortunatly you'll accomplish little or nothing and in the end, I'll still be on the air building gear, connecting my 6m equipment to my friends UHF repeater in Ohio via the internet, going to hamfests and generally just having a great time with radio. Of course with your "jamming is fun" mentality I don't suppose you ever figured out where the fun was.

I can't say for sure, since I do not have first-hand knowledge of the event in
question...but I would guess that his decision to forget about amateur radio
was due to several such encounters, not one isolated event. I've heard this
happen over and over again.

>No Drew it doesn't scare me the amateur
>community is strong and with recent changes in the FCC enforcment it will
>only get better.

Let's hope so. But as I read this, Preacher John and Phil are embroiled in
another endless battle on 14.313. I wouldn't count on the problems being
solved anytime soon.

>The funny part is how the doomsdayers, like yourself, profess day
>after day how the hobby is dying based on testamonials like the one above.
Keep >up the good fight Drew, unfortunatly you'll accomplish little or nothing

Look at the numbers. The commerical interests are getting more and more
powerful while the number of licensed amateurs is dropping, especially in the
higher classes of license. What does that tell you? Tells me it's only a
matter of time...

> Of course with your "jamming is fun" mentality I don't
>suppose you ever figured out where the fun was.

I was waiting for the personal and unrelated attack. You didn't disappoint.

Hello.
I need informations about building a NOAA satellite 137 MHz antenna (For instance "Turnstyle").
I am currently designing a special receiver for a project in university.

Please give me details about the construction (schematics and measurements welcome !!)

(Sorry if my English is not perfect, but ... I am French.).

You can either mail me at: ----->scan7705@my-dejanews.com
or:
----->fan_de_piercings@hotmail.com

Please DO NOT reply in the newsgroups please, because I will not be able to read messages, unless on saturday or sunday, at home ....

MANY THANKS IN ADVANCE . . .

6157. Re: All you Amateur math wizards, lets have fun.

paulvanasse@tp.net says...

> >Assuming the Earth was a perfectly smooth sphere (as if it were all water),
> >how high would one have to make an antenna to reach a maximum signal
> >distance for a "Line of Sight" signal?

Your question is missing one critical peice of information,
the elevation of the receiving antenna. Assuming the antenna
to be a "point source" the maximum amount of surface you
could illuminate would approach (but never quite reach) one
hemisphere. Assuming the antenna to be located at (above)
either pole, at some impractical height, it could "see" the
surface of the earth almost but not quite to the equator.

Therefore the answer to your question depends on the
elevation of the receiving antenna.

> In addition, assuming it were possible to do so, what would be the
> radiowaves total distance traveled in miles at the furthest receiving
> point, assuming the receiving station had an antenna on or near the ground?

Using the above example (point source antenna above the pole
and a receiving point not elevated above the surface of the
earth) the distance traveled would be the hypotenuse of a
very tall skinny right triangle, where the base of the
triangle is parallel with the equator and touches the
surface of the earth at the transmitting antenna's horizon,
the right angle is directly centered inline with the poles,
and the upper apex is at the "point source" antenna.

> matter of time...

While the numbers may go up or down I'm not sure that numbers ALONE are an indication of the current status of the hobby, were going through quite a transition phase, look at the days of Hammarlund, Collins, Knight, and Hallicrafters they were all out of business by the mid 70's if not earlier. Ham radio didn't die then, it just changed. Heath kept going up untill the early 80's then they dropped out. But look at what's happening now, because of software for PC's I'm starting to hear Slow Scan nets on 2m popping up all over the place, 6m AM nets are comming back due to people putting old 6m tube rigs back on the air somthing you NEVER heard 15 years ago. QRP is making a huge comback as more learn that a kilowatt just isn't required for fun, look at the number of new kits available from DDS VFO's and singleband CW rigs to full blown kits like the new K2 an all band transceiver. If you consider these things that are happening then it's hard to believe that the hobby is doomed but rather comming out of a 'low cycle' As far as commercial interests are concerned changes in the industry like trunking are making more use of existing radio frequencys and yes they will take runs on our existing frequencys and yes we may loose some here and there but that's no reason to throw in the towel. A group is currently experimenting on 5MHz in hopes to propose a new amature band in a couple years, and commercial interests want little to do with HF, it's not reliable and utility operation has gone to internet and satellites.&#65533; Instead of tearing down a hobby that has a few things in it you don't like why not come on board and make it better? Start a local net to talk about the things YOU want to talk about, radio, politics, whatever, put up you own machine I'm sure you'll find others that have the same interests in scanning, shortwave or anything else. You obviously had an interest in radio at one time, even if you only got your ticket to fight local scanning laws with respect to mobile use, it doesn't make sense that you would want to see this destroyed. Loose ham radio and loose your permit to run your scanner mobile.

> > Of course with your "jamming is fun" mentality I don't
> >suppose you ever figured out where the fun was.
>
> I was waiting for the personal and unrelated attack.&#65533; You didn't disappoint.

That's because it is personal Drew, your doing your best to teardown a hobby that I happen to enjoy, why I'll never understand but that's your right to do so. I've read some of your commentary about commercial radio, you not stupid, just immature.

With your background in commercial radio you probably have a lot to offer and a lot to talk about, but instead you make thirty posts reffering to "babbling Brucie"&#65533;
Your of course free to speak you mind here like everyone else, it's just sad to watch someone behave in the mannor you do when clearly you have more to offer. Why not try discusing something on the group? You might find someone actually has an interest in what you have to say if you can just lay off the pre-school name calling for a while.

I have noticed a major increase in the amount of RTTY and other mode activity on the "intruded" frequencies below 28.100 mhz.

Good going, and please keep using your licensed privilages to operate on this portion of the ten meter band, and at the necessary power level to establish reliable communication over un-licensed RF sources!

Paul

as long as satellites are in orbit you can have the antenna at any height
otherwise you would never get past the equator unless you can bounce the signal
off of the atmosphere.

Are Sundays reserved for the "fire and brimstone" warnings of KC3AU, or what's the deal here? He's been at it for most of the day. Even though I agree with much of his message, I don't think the FCC would approve of his actions. His monologues go on for several minutes at a time without pause. This is BROADCASTING and is therefore not within the scope of permitted amateur radio communications.

Agreed. But be careful to resist the temptation to engage in prohibited communications in order to dissuade the illegal stations. Repeatedly calling "CB'ERS GO AWAY", "CB'ERS ARE NOT ALLOWED HERE", or making similar statements are not permitted communications. It's either one-way communications (broadcasting) or attempting to communicate with unlicensed stations, depending on how you look at it. Either way, it's illegal. Don't attempt to discourage illegal operators by becoming one yourself.

Honestly? Because I have more fun participating in the daily circus which has
become this newsgroup than I ever did on amateur radio. I'd guess there are
others on here who feel the same way. Being part of THE ZOO here is good,
cheap entertainment...and it keeps me sharp! Much more enjoyable than "my QTH
is", "my rig is", "my 10-10 number is", my grid square is", "when I was in
World War 2...", and "my health ailments are."

I have a w32A and it is very good. One thing you need to know is that you
should avoid using an external power supply as much as possible because the
repetitive movement of the plug in the socket on the radio does damage to
the socket. This is general for all radios, but it seems to be compounded in
w32a because the jack is on top and is more susceptible to pulling from the
chord which typically runs over the back of the radio. The thing is, when
the damage happens, it causes a short which forces the radio to deploy its
voltage protection and not turn on. This is just something which I picked up
from this NG about a year ago. In essence, it is ok to charge the battery by
the jack on the radio (drop in charger is still better). It is undesirable
to use the radio with a chord plugged in tugging on the jack.

Congrats Hans,

You understand the question exactly. By creating the conic section that you described, 1/2 of the entire planet could be reached in a "Line of Sight" fashion. This is the same method of calculating the height of geo-stationary orbits for satellites. However, do you have the antenna height and the radiowave maximum length (they are ridiculous numbers however they are NOT infinite)?

3D2, FIJI. The "DX News Sheet" reports that Paul, A35RK, will be active again from the Viti Levu and Vanua Levu Groups (IOTA OC-016) as 3D2RK. His activity will be in May for 3 to 4 weeks. Operations will be mostly CW. QSL via W7TSQ.

3W6, VIETNAM. Jani, YB0US/NM6US, will be operating from here as 3W6US from March 25-29th. This will include the CQWW WPX SSB Contest. Jani will be using the special callsign XV300S (that's Xray Victor Three Zero Zero Sugar) during the CQ WPX SSB Contest (March 27-28th). QSL XV300S via JH1EVE, Hiro H. Higashiyama, 1-12-5 Higashijujo, Kita, Tokyo, Japan. Outside of the contest, Jani will use his own call, 3W6US. QSL 3W6US via N2OO: Bob Schenck, P.O. Box 345, Tuckerton, NJ 08087-0345 USA. QSL Manager Bob, N2OO, states, "For those of you still waiting for a 3W6US card from his last operation there in October 1998.... the cards should arrive from the printer in the next week or two. When they arrive, I shall kick butt! Good things always come to those who wait!"

8P, BARBADOS. Mario, K2ZD, will be operating from here as 8P9JM from April 6-13th. Activity will be on 50 Mhz and HF, with 100 watts. QSL via K2ZD.

8Q7, MALDIVE ISLANDS. "The 59(9) DXReport" reports that DH5HV will be active from here May 17-31st, while on his honeymoon. Operations will be with 100 watts into a dipole.

9M2, WEST MALAYSIA. Johnny, G3LIV, will be active from Pulau Penang as 9M2/G3LIV, May 4-24th. Activity will be mainly on CW 20/17/15 meters.

QSL via his home callsign.

C21SX/C21ZM WRAP UP. Nauru operations C21SX (Roger/G3SXW) and C21ZM (Bob/G3ZEM) made over 20,000 CW contacts in 132 DXCC countries between February 27th and March 7th on all nine HF bands, including 38% on the WARC bands. More details and break down on this operation will be provided to OPDX InterNet Subscribers as an addtional bulletin.

CORRECTION. In OPDX.399, under "JW, SVALBARD", Kjell's (SM7NAS) Web site was listed wrong. The URL address should have been:
http://home.bip.net/kjell_adolfsson

CY9, ST. PAUL ISLAND. Look for CY9CWI to be activated by the West Island ARC of Montreal from July 21-28, 1999. Operation from this DXCC country will be on 160-6 meters as conditions permit. Operation will be on or near the frequencies: 1830, 3005, 3745, 7005, 7065, 7230, 10105, 14010, 14265, 18125, 21010, 21305, 24935, 28010, 28395, 50010 and 50130 kHz. The team will be an entry in the 1999 IOTA Contest (July 24-25th) and will make special efforts to work Asians on 10-15 meters, Europeans on 80-160 meters, and Canadians everywhere! Operators will be Helen/VE2YAK (YL Op), Fred/VE2SEI, Al/VO1NO/VE1, Reg/VE2AYU, Bill/VE1MR, Dragan/VE2ZIV, Lowell/VY2OX, and J-F (Jeff)/VE2TBH. The following CY9 references were provided: CQ zone 05, ITU Zone 09, IOTA NA-94, Can. Is. NS-002, N. Lat. 47.33 degs., W. Long. 60.16 degs. Direct comments/questions go to: Fred Archibald VE2SEI, 130 Embleton Crescent, Pointe Claire, QC, H9R3N2 Canada or via his E-mail address: archibal@pubnix.net
QSL via VE2CWI West Island ARC, Box 884, Dorval, Quebec, H9R 4Z6 CANADA.

E41, PALESTINE. "E41/OK1DTP is a legal operation", states Zoli, HA1AG (aka E44/HA1AG). Zoli reports that he has seen the printed license of David, E41/OK1DTP, in the Ministry of Telecommunications in Gaza. By the way, a copy of the license can be seen on the following Web site:
http://www.okdxc.cz/e41/license.htm
Zoli goes on and mentions that E44 is used for the operations from the Gaza Strip such as E44/JA8RUZ, E44/HA1AG and E44/JA1UT. All other regions will use different callsigns like E41/OK1DTP or E46/OZ6ACD. It would seem David is the first to use the E41 prefix. ADDED NOTE: Zoli states that QSLs for E44/HA1AG will be ready by Monday, March 15th.
Meanwhile, E41/OK1DTP, continues to be active and was heard on 12/10 meters SSB over the past weekend. Check 24935 and 28400 kHz between 1100 and 1400z.

EA8, CANARY ISLANDS. Chris, 9A4KK, reports that he will be active from here during the CQ WPX CW Conetst as a Low Power entry. He is currently unsure what bands he will be active on.

HK, COLOMBIA. Gerard, F2JD/G0SHN, continues to be active as G0SHN/HK3 until the local administration gives him a normal HK3 callsign. He will be here for about the next 2 years. He can sometimes be found on 20 meters. QSL via the French Bureau REF or via F6AJA: Jean-Michel Duthilleul, 515 rue du Petit HEM, 59870 Bouvignies, France.

HV, VATICAN. Luca, IW0DJB, HV5PUL's QSL Manager, reports that the ham station from Pontifica University Lateranense, Vatican City State, will be on air on April 22nd during the "III Lateran Journey". The activity will be on HF, RTTY, 6 and 2 meters. For other information on the HV5PUL station check out the Web site at: http://www.pul.it

IOTA NEWS.....
EU-011. Glyn, GW0ANA, reports to OPDX that from May 3-8th, he will be on a small backpackers trip to the Scilly Isles. He will be active on Tresco Island using the callsign G0ANA/p. The trip is exploratory for a future big scale expedition. He will only take a TS-50S using 100 watts only, an Outbacker vertical and wire antennas with him. Weight must be kept to a minimum due to the helicopter flight. QSL via GW0ANA, CBA or bureau.

EU-032. Didier F5BJW will be TM2A from Aix Island from April 10-17th on SSB all bands.

EU-068. Operators F5TYY, F6IUI, F6BFH and F9IE will be signing their callsigns/P from Ile de Sein from May 13-15th.

EU-068. Operators F5PVF, F5TVG, F6JMT, F8ATS, F4AJQ, F4TTR and F1UHM will activate Sein Island from May 22-27th with the club callsign F6KOP/P. They will be on SSB, CW and SSTV with operations on 80m to 23cm.

EU-074. Jean Marc, F5SGI, will be signing F5SGI/P from Brehat Island from April 25-30th. He will be operating mostly on CW with some SSB activity on 14260 kHz.

EU-081. The radio club "F6KFV" will be using TM2F from St. Marcouf Island for the IOTA contest (at the end of July).

OC-127. By the time you read this, Bernard, DL2GAC, should be active as H44MS from Rennel Island. He will be active until March 22nd. Activity will be on 40/20/17/12/10 meters. QSL via his home callsign.

JT, MONGOLIA. Operators Antonio/I1ZB, Andrea/IZ0CRN, Gaetano/IT9GAI and Nicola/I0SNY will be active April 6-15th, as JT1Y from the JT1KAA club station in Ulan-Bator. QSL via I0SNY. Suggested frequencies are:
CW - 1825, 3505, 7005, 10105, 14015, 18075, 21015, 24895, 28015 and 50110 kHz.
SSB - 1840, 3780, 7045, 14185, 18145, 21285, 24985, 28485 and 50110 kHz.

N7GSU/BCN (Signal reports PLEASE). Robin, N7GSU, reports that the N7GSU Beacon is now on the air at 28.2825 MHz. It transmits continous with 500mw to a 1/2 W Vertical antenna from grid CN85if. Please send signal reports via snail mail to Robin Faulkner, N7GSU, 24142 SW Peavine Rd., McMinnville, OR 97128 or via E-mail to: n7gsu@qsl.net

NEW OFFICERS FOR 1999.....
The Northern Ohio DX Association will retain their current officers

for another term. They are: President - Tedd Mirgliotta/KB8NW, Vice President - Dwaine Modock/K8ME, Secretary - Ron Borkey/K8VJG and Treasurer - Mary Michaelis/N8DMM

The new officers for the Western Washington DX Club for 1999 are: President - Dick Swanson/K7BTW, Vice President - Ralph Javins/N7KGA, Secretary - Mike Schone/WA7BAY, Treasurer - Marina Zuettel/N7LSL. The Trustees are: John Gohndrone/N7TT, Roger Huntley/W7VV, Joe Gregory/W7QN, Dave Wallace/KK7KJ, David Jones/KK7GW and Adam Kerner/K7ST.
P3, CYPRUS. Harry, UN7FZ/UP6F, informs OPDX that the "Team of P3A" will take part in CQ WW WPX SSB as a Multi/Multi category. QSL via W3HNK. Operators will be active before and after the contest using their callsigns/5B4. QSLs for operations before and after the contest must go to home callsigns.

QSL INFO AND NEWS.....
HC8L QSL ROUTE. Mike, K4YDK, worked Dave (W6NL), HC8L, and was able to get the address for the HC8 bureau. It is: Guayaquil Radio Club, Box 5757, Guayaquil, Ecuador.

5W0GD/A35XU QSLS. PA3AXU has informed OPDX that there is no back log for direct QSLs on these cards. Also, he has answered the first bunch of QSL (approx. 200 cards) received through the bureau. If you still need a QSL, send them direct to: G.A.M.C. Dijkers, Dokter P.A. Cornethof 3, 6669AZ Dodewaard, The Netherlands.

Eduardo, OA4SS, states he has a stateside QSL Manager. QSL to his manager KB6J (SASE or IRC's).

New QSL information for HC6CR/HD6CR and HC6FG/HD6FG. QSL Manager Rick, NE8Z/HC1MD, reports that as of March 9, 1999, he will no longer be the QSL Manager for HC6CR, HD6CR, HC6FG and HD6FG. All past, present and future QSOs can be confirmed via their direct addresses:
HC6CR/HD6CR HC6FG/HD6FG
Roberto Camacho Maricela de Camacho
Casilla 614 Casilla 614
Ambato, Ecuador Ambato, Ecuador
He states mail theft in Ecuador has made the passing of logs impossible, and they are not able to send him the logs via E-mail. The entire country is going through a severe financial crisis with devaluation of their local currency. However, Rick will continue to act as QSL Manager for Alfredo/HC1HC. Alfredo does computer logging and is able to communicate with him daily via E-mail with logs and/or other information.

Mike, Z31FK, reports some bulletins and manager-lists include the QSL information Z31FK via I1YRL. Mike, Z31FK, states this is definitely wrong!!!!! I1YRL has never been his QSL Manager! The correct route is the direct address which is the only correct route for Z31FK (or via bureau) as follows: Dimitar Jordanov ("Mike"), P.O.Box 45, 92300 Kocani, Rep. Macedonia

VK9XX QSL CARDS. Charlie, W0YG, reports that all USA and Canada QSL cards received to date have been answered UNLESS both VK9XX and VK9YY cards were enclosed within the same envelope. This will take a considerably longer time to sort out. He also mentions that if a request for QSL cards was received without a return envelope, these cards will be sent through the bureau. Charlie estimates the first bureau shipment to be approximately a year away due to the workload of servicing some 10 DX operations as QSL manager. Direct requests are encouraged to eliminate delays. He will address JA and EU cards next for their VK9XX operation.

SPECIAL EVENT. A special event station will be on the air to celebrate Marconi`s first transmission "Across the English Channel" from Dover to France. This first "DX" transmission was done on the 27th of March, 1899. Their re-enactment will take place from his original QTH South Foreland Lighthouse, Dover. The operation will be active from the March 25-29th, using the callsign GB100SFL (if confirmed by authorities, if not then GX4BRS). QSL to GW0ANA, CBA or the bureau.

SPECIAL EVENT. Look for special event station UE9WZZ to be active to celebrate the 80th anniversary of the Republic of Bashkortostan (Russia). Look for activity on all bands especially 20/15/10 meters bands. QSL via RZ9WZ. E-mail address: rz9wz@ufanet.ru
Direct address: P.O.Box 7, Ufa, Russia, 450071

T5, SOMALIA. A few sources report that Julian, T5EC, a member of a German medical relief team in Badade, was heard on 12 meters SSB on March 7th. No other information or QSNs were reported since then. His length of stay is not known. QSL via DL0MAR

TX8, NEW CALEDONIA. Operator FK8FI, FK8VHN, FK8HC and FK8GM will be active in the CQ WPX Contest in 2 weeks as TX8DX as a Multi/Multi entry. The QSL Mmanager is VK4FW: Bill Horner, PO Box 929, Gympie QLD 4570, Australia.

VP5, TURKS & CAICOS ISLANDS. Matt/IK2SGC and Conrad/IK2SFZ will be active from March 24th to April 5th from Whitby, North Caicos as VP5/IK2SGC and VP5/IK2SFZ. They will be on the air for the CQ WPX SSB Contest as Multi/ Single as VP5N or VP5R. During the non-contest operation, they will be concentrating on the lower bands and WARC bands. The equipment will be the following: Yaesu FT1000MP, Kenwood TS-950, Kenwood TS930, Kenwood TS-830, Alpha 87A, Alpha 78, Heath SB220, 10 element 10/15/20 + WARC, Cushcraft 2 element 40 Meter, M2 80M rotatable dipole and 160m slopers. QSL via IK2SAI. E-mail QSL requests for the bureau can be sent to: ik2sai@amsat.org
Or via packet radio at: ik2sai@ik2hdg.ilom.ita.eu Direct QSLs can be sent to: IMCO P.O.Box 99 20101 Milan Italy.

XX9, MACAO. Ed, K8EP, will be travelling to XX9-land over the period April 8, 9, 10, 11 and 12th. He will obtaining his license when he arrives there (Callsign to be assigned later). His operations will be on 40-10 meters SSB and CW. QSL via K8EP.

YB0, INDONESIA. Wisnu, YB0AZ, reports that he tries to be on 14195 kHz (+/- QRM) each day. He is currently looking for HI and MS to complete his WAS on 20. QSL via Bob/W7TSQ his QSL manager and THE ONLY route for a card. Bureau cards are OK.

ZC4, UNITED KINGDOM SOVEREIGN BASES ON CYPRUS. The "DX News Sheet" reports that George, 5B4AGC, may be active as ZC4RAF, March 26th. Activity will be on CW, possibly staying overnight for LF bands. QSL via 5B4YX.

ZK2 NIUE. Look for Uwe/DL2YAK and Hape/DL1EMH to be active from here March 22nd through April 11th as ZK2GEO. Activity will be on all bands CW/SSB/RTTY and also an entry in the CQ WPX SSB Contest. QSL via DL1EMH.

ZV0, ST. PETER & ST. PAUL ARCHIPELAGO (Update). By the time you read this, the ZV0SB and ZV0SW operation should have started (scheduled to begin on March 15th or 16th). It was announced this past week the team will, unfortunately, not work RTTY this trip. They hope to do it next DXpedition. Also announced, Ari, PT2BW, who was to be their pilot station and land coordinator, had to drop out do to health reasons. Morgado, PT2CSM, will replace him along with the help of PS7AB/Ronny, PT2/PY1HE/ Dias and PT2TF/Tereza. Operations will last until March 21st or 22nd.

naw. he's forgotten all about edge diffraction. that's what often gets vhf signals over hills, and it would work with a perfectly smooth earth.... so the conic section thing is a gross oversimplification. you would quite quickly start to illuminate the opposite hemisphere even without an ionosphere once you got above... well you figure it out, genius... LOL!!

Okay. Sorry to have put you into data overload. Must be
tough doing all of those VP things and having to read
newsgroups too. Now that we understand how busy you are, the
succinct answer is yes. It costs $150 from ARRL. Buy it
and you can play to your heart's content.

6179. Re: FCC JAMS HAMS

Just the opposite, I oppose any censorship, even
when illegally carried out by the FCC.

For a clarification on the original topic of this thread,
check the website:
http://www.atlcom.net/~geozim/index.htm

FCC JAMS HAMS
the FCC is a criminal faction of a criminal executive branch,
engaged in a criminal coverup which is further protected by
a criminal Justice Department, also a party to the crime.

The FCC knowingly, intentional, deliberately, willfully and
purposefully supplied radio jamming equipment to the FBI and,
with reasonable assumption, to the US Air Force for the
purpose of jamming AM and FM radio broadcasters, TV
broadcasters and the Amateur Radio Service. The amateur
station jammed was defined as a Title 47, Code of Federal
Regulations, Part 97.405 Station in Distress, relaying
emergency communications critical to safety of human life.
As a result, appoximately 100 people died.

FCC is also a deliberate violator of the Freedom of
Information Act, using an exemption of documents not
allowed under the list of exempted documents types.
Whereas, I have not posted details on this to the
website yet, you can read the 36 descriptions of
FOIA requested documents in the FOIA Administrative
Appeal letter. All of these are denied on the basis
that I have figured out what the nature and content
of the documents are, and the FCC does not want to
verify my logical, analytical and deductive work
that has narrowed down the documents almost to the
point of writting them myself. Actually, I already
have two of the documents, and stand ready to
publish them, as soon as I can arrange to leave the
country, and post them from a safe place.

Neither last nor least, but in closing on FCC criminality, FCC is a criminal co-conspirator with FBI to classify documents pertaining to the criminal operations of the FCC and FBI. Such classification of documents for the purpose of avoiding criminal prosecution is specifically described as a criminal violation in any Executive Order pertaining to such classification at the time of classification.

Get the FCC out of the control business, contact your Congressman, ask that he support Henry Hyde of the House Judiciary Committee to convene a hearing into the criminal coverup by FCC Chairman Kennard of the criminal operations of the FCC and FBI and US Air Force engaged in Communications Act violations.

Get the American Radio Relay League out of its tyrannical misrepresentation of the amateur community. Publish the fact that the ARRL board voted not to reveal the criminal operations of the FCC and FBI. What decent person would be a member of such a criminal organization. If you are in the ARRL, moral integrity demands you quit.

I think no-code licensing, or any legal licensing is great. I had to take my little 5wpm test in 1990 and hated it(I hate morse code), but I wanted a license for 2m & 440. So I did. I also still like and operate CB, both at home and in the vehicle. So there is a place for both, if you just like radio in general. It was'nt too far back when you needed a license for CB, then after that, had to pay $20 for a license(when I got mine), then $8, then $3, then free. I still remember my official cb call sign, do you?

This is hardly an example of something being said "behind our backs."
rec.radio.cb is a public newsgroup, is it not?

Furthermore, I have stated here in plain English and on several occasions that the ONLY reason I continue to post is because knuckleheads like yourself repeatedly respond...again and again and again. When Paul (K5PF) says things like "Just ignore Rambo", I scoff at his advice...but ONLY because I know you clowns will NEVER be able to do it.

Don't want me posting here? Stop responding and continuing to fan the flames by drudging up old posts, posting bogus "articles", etc. Ignore me and I'll go away. Simple, really. But you just can't do it, can you?

6192. Ham Radio dying along with other hobbies

Newsgroup: rec.radio.amateur.misc
Date: 1999-03-14 00:00:00 UTC
From: "Dean, Greg" <N9NWO@GTE.net>
Message-ID: <7chj4e$2ns$1@news-2.news.gte.net>
Source record: 148213

I just returned from the big hamfest in Indy. Attendance is down. But so is the attendance for gun shows and even dog shows. The people who are involved in most hobbies are getting older. There was some increase in the late '80s as Baby Boomers finally got into hobbies. But that is now peaked. Hobbyists of all types are getting older as the whole population ages.

Only one activity is increasing. Golf. And that is because you need to play it to get ahead at work.

Two factors are at work. One is that our population is decreasing. There were 30 million kids turning 18 in 1969. By 1992, it was only 9 million. There are no kids to replace us.

The other factor is that we no longer live in families. Especially multi generational ones. Fathers and mothers, which are now disappearing, never have had time for the kids. The farm, the job has always taken their time. It was the grandparents that taught the kids to work, to cook, to make things. Hobbies were passed on by the grandparents.

My suggestion is find a kid, about 7 to 9 in age, and lead him into our hobby. Give him a passion for life. If nothing else, it will help to keep him out of trouble. I ran into to a kid at the hamfest was as nuts for the hobby as I was at his age (15). His parents drove him from Madison Indiana (near the Ohio River, over 100 miles) to the Indianapolis hamfest. Just to buy a radio. A year ago the kid was in front of a judge for committing
crimes. Ham Radio turned him around. Do you think you could "grandfather" a young person?

Greg Dean, N9NWO

Interesting comments. I have to disagree on one point though, You said
that our population was decreasing. I believe it in the opposite. It is
just that kids are lazy now and are not imterested in amateur radio
especially code. They now have computers and video games which we did
not have when we were growing up. --Greg in Denver Colorado--N0FKI

Oops! It is just that *some* kids are lazy now. Some of us aren't... I studied for my license just last year and I got it, too... no help from family, either- they don't have licenses.

The reason you don't have more young people in amateur radio is that there are not enough people showing it off... amateur radio has almost become secretive in some circles... that's not what it's about, though.

People have to go and show people the hobby, or we won't even know it exists. I work at the National Museum of Science and Technology, Canada, on weekends to show off amateur radio, and tens of people see it and become interested because of it. You have to go show your local scout troop... you have to donate a QRP rig to your local high school... you have to donate a subscription of your favourite ham magazine(s) to your local public library.

We all have to do something! There is currently NO awareness! People will not decide to go and get their ticket because of a 15 second news bite about how hams helped flood victims two states away. They have to SEE what ham radio has done, is doing, and will do for their community. It is the only way.

>i'm sure you think they're something else....
>
>what you been smokin', guy?
>

Perhaps you didnt understand the question. If you read the question
carefully it will provide a very clear finite answer. The problem and
solution actually have nothing to do with radio propagation or its effects
and is achieved through some rudimentary trigonometry.............of course
this is all in fun.................without being insulting.

6197. Re: IC-W32A

So what's wrong with the IC-2100H? I have one and think it's a pretty good radio. Actually, it's a great radio when you consider the price. I also have the IC-W32A and think it's the best dual band HT going. Back to the 2100H, I also have an IC-2710 and think the 2100 challenges it in performance, especially considering the price...

If you haven't figured out that I like ICOM products, note that I also have an IC-756 for a little HF work.

Cheers,
KB3BYZ

Well if the antenna were high enough say 26,000 miles or so you could have line of sight with 1/2 the earth, if your looking for a good teaser, define the problem better and you'll stand a better chance of luring them in. :)

My question first, then the article.

Ok, so they are gonna test their equipment..... no problem..... I'm sure that Y2K has nothing to do with this test *Officially*. :) ha ha choke cough..... As I understand it to be a *non issue* according to the Prez.

Can anyone give a list of the expected frequencies that they will be using, as I want to test my equipment as well :)

Pure and simple.

Thanks in advance, and I appreciate your expertise.

Carl A. Stiles

NEW YORK, March 10 • The U.S. National Guard, in preparation for possible Year 2000 disruptions, will for the first time stage a nationwide communications drill to ensure they can keep in touch if phones, e-mail and faxes fail, officials said Wednesday.

DURING THE FIRST WEEK of May, National Guard commanders across the United states will assume it is New Year•s Day 2000 and the phones are down. These so-called weekend warriors will test high-frequency radios to make sure the Guard•s Washington headquarters can communicate with headquarters in 50 states, three territories and the District of Columbia.

See complete story at above URL.

Never mind what you are all saying, the debate SHOULD be dead in the water!!
Amateur radio is about experimenting, guidance for those junior to us and SERVING
our people of the world in emergency and non emergency situations. With that
little reminder I would like to point out the following.
1. There are very few of us who teach the young about amateur radio anymore.
(Unfortunately)
2. The level of experimenting in this "hobby?" has drastically reduced. (It seems
to be comercial experimenting ONLY that is being done.)
3. CONSTANT WAVE is not recognized any longer by the leaders of the world as a
means of communication, so why force someone to learn it if it will not be
recognized in emergency / non emergency situations? (OUR LITTLE CIRCLE GROWS
smaller.)

73 hope you are thinking

> Joel KB7RYU

The problem with acronyms or mnemonics are that if they aren't simple it's easier remembering the thing in the first place. This is especially true when using someone else's scheme for remembering something, because it isn't necessarily the way your own mind files things.

The color code is really quite easy to remmeber.

If you rely on some spiffy sentence to recall the sequence, you'll end up always having to do a lookup search on the sentence and then calculate the matching word's place in the sentence to get the number.

This is about the same mechanism as if you learned the code by looking up the dots and dashes from a table. You hear the sound, you decipher the sequence, and then you look up a match. If you simply associate the string of dots and dashes with the character, the intermediate step is removed.

The trick to learning the resistor color code is to use it. Back when I started in electronics, I must have kept the ARRL Handbook (which was smaller back then) or some other book with the color code chart handy. If there was a resistor I wanted to know the value of, I'd look it up on the chart. With a little time, I'd recognize the colors as the numbers they represented. Note that I was building things and handling the resistors, which is a far less abstract environment for learning the color code than trying to simply memorize the color code.

If I was helping someone today, I'd suggest they photocopy the chart, cut it to size, and tape it to a similar size of cardboard. That is heandier than constantly thumbing through the book. A trick to try might be to get a box of markers, and put a dot of the appropriate color next to the number, as a visual aid for finding the value. When building, you get into the habit of checking the value of components before wiring them in, and maybe simply using a digital multimeter to measure the value of the resistor would be enough to help you connect the color with the number, though I'm less certain.

One thing this won't do is allow you to give off a string of colors when someone gives you the value of a resistor. I find that while I'm okay looking at resistor color codes, I'm less capable of decoding in an abstract setting. I notice the same problem when someone asks me where a familiar street is. I have to pause and think, but if I was going there myself, I wouldn't give it any thought at all. But that's okay because the point of the color code is to use it, and I can instantly read the code when in it's proper environment, which is visual (just as code is an aural communication mode, not visual).

I also notice that common resistors are instantly recognizable by their complete seauence. I know that 4.7K resistor in front of me is a 4.7K resistor (though I'd have to churn some gears to give you the color code as I write this), but a 390K resistor requires me to decode it stripe by stripe.

I think that rather sums it all up. Let me present some questions and views from "the other side." I'm not licensed, but thinking about it (and shopping for equipment, too). Many years ago as a child, I wanted to get involved but never saved enough from mowing lawns to act on it. Now, with sufficient means and a rekindled interest, I'm once again eyeing the corner table that's begging for a new decor.

How relevant is amateur radio these days, when the Internet makes casual chatting so simple and reliable? These thoughts here go out to thousands. Barring a global catastrophe, I can expect to bootup tomorrow morning, and read your responses at my leisure. Isn't this rag-chewing at its finest?

I'll grant you there is a technical challenge in mastering CW. There is an arcane appeal to finally making sense of the di-dah's I heard as a child (my father was a radio engineer, but not a ham). So, here I am struggling along at 5 baud, when I would otherwise take advantage of the multi-megabit/second network I have available. I can only imagine the stifling effect this has on expression and conversation. The code-practice material certainly underscores this in its unthinking fashion.

Maybe there was a time when I would have been thrilled to build a working system for myself for roughly the same cost as a cheap commercial unit. That day passed, for the last time I think, when I wired enough parts into a Vic 20 to give it equivalence to my brother's newer Commodore 64. (Sadly, it was lacking in software support, but it was still killer.) I can't possibly compete with IC's in computers these days, let alone in RF equipment.

There is one last practical bastion that I haven't entered yet. I've always wanted to add a video downlink to my R/C helicopter. Doing so requires more RF power than I can legally run without an FCC license, so a Tech license makes sense there. But that isn't hamming, is it?

You don't have to look farther than this NG for a starting point in your crusade to save amateur radio. It's a safe bet that everyone looking for

more information will stop here very early, maybe right after shopping the web merchants for prices. Your club pages are on the list, but I haven't quite reached that point in my research.

So, I'm not your first customer, but maybe the first you recognize as such. Help me reason this through. This should be an easy sell, as I sought you out for the answers.

Michael.

Don't hold your breath waiting for him to document what he says about having a license, Harris. People have challenged him on that for years. Funny how he is quick to correct anyone who doubts that he has an Amateur ticket, but he speaks ill of ham radio at every opportunity. Over 1900 years ago, Jesus observed, "Can fresh water and salt water flow from the same spring?" Methinks this water is foul!

This concept is the subject of my forthcoming book, The Writings of Chairman Rambo.** When I get out there Friday, I'll give you a call and share some additional information about this individual. I'm flying into Hobby and driving to the Federal Road/San Jacinto area. I'll call you on the LL if I don't hear you on one of the repeaters.

I'll give you some stuff via LL to help you. Meanwhile, I'm back on ignore. Playing with him gets boring real quick--like shooting fish in a barrel. See ya this weekend.

>> rec.radio.cb is a public newsgroup, is it not?
>>

Maybe not for long, thanks to Rambo. Now that it has gotten widespread attention, folks have realized that is an on-line clearing house for illegal radio equipment such as modified ham rigs and power amplifiers. Only a few hams read it until Rambo got cranked up over there indicating that they could move into the 10 meter band with no license. If rec.radio.cb disappears from some providers, they have Rambo to thank. I'm sure THAT will make him popular!

Try this one:

Bad Boys Ravish Our Young Girls But Violet Gives Willingly

for Gold and Silver at the Five and Dime.

I added the last line when I started teaching electronics and avionics
as a memory aid for the tolerance bands

Gold equals five percent and Silver equals ten percent.

What makes you think you'll be safe in a foreign country? As soon as you expose the FCC for what they have done their going to turn on their low orbiting mind control laser satellite and turn you into an agent for the CIA, or worse send an agent to find you and taint your drinking water with a genetic altering chemical and turn you into a research lab animal. The original Shamu of Sea World in Aurora, OH (RIP) was once such an informant who thought he was going to bring the FCC to their knees.
Remember Topo Gijo? Many thought he&#65533; was just a marionette on the Ed Sullivan show? WRONG! before they turned him into a simple paper mache puppet, Eduardo "Squiggy" De Salvo had specific and documented knowledge of an FCC conspiracy that secretly hid covert military instructions in Amateur Extra exams administered by the Pink Boys of the FCC.&#65533; Be afraid George, be very afraid.

I have an AR-146 ADI moble radio and it recieves down to 130 MHz. Maybe that is due to the out of band transmit mod I did to the radio. You can get the mod at http://members.aol.com/adimods . Hope this helps you out.

I won't enter the fray about whether or not the numbers of licensees is truly down, but it will be a long time before any ham *HF* spectrum is threatened: we are actually getting more of it soon (the "experimental" 60-meter band, add-ons to the WARC bands likely at WRC-2001, and a shift/expansion of 40-meters at the same or following Conference).

Don't blame me, blame those who provide the illegal equipment. And by the way, I suppose we better get rid of hundreds if not thousands of other Internet newsgroups, too. Let's start with alt.radio.pirate. Ever read that? It's full of people selling transmitters, antennas, etc., with which to construct illegal broadcast stations. Then we'll move on to the really scary stuff: newsgroups which tell how to make bombs, enact anarchy, etc. One of the prices we pay for living in a free society is the existence of Internet newsgroups which contain information we may wish was not so freely available.

> If rec.radio.cb disappears from
>>some providers, they have Rambo to thank. I'm sure THAT will make him
>>popular!
>
>Don't blame me, blame those who provide the illegal equipment.

In December, AOL (Rambo's provider of choice) dropped 18 newsgroups from its line-up due to the content. The subject matter ranged from Incest to Hate Groups.

Meanwhile, the FCC has a good track record dealing with sources of illegal radio equipment being marketed to the public for use in the Citizens Band. Andy's Electronics in Houston comes to mind immediately because of the size of the fine. Concerned Amateurs are making the point to the FCC that AOL is providing a virtual CB sales shop and encouraging freeband activity. In addition to rec.radio.cb, AOL provides in-house bulletin boards being used for similar exchanges of information.

Rambo should consult his mythical "legal adviser" whom he often mentions in his posts. I can assure Rambo that he has nothing to worry about until at least the end of the week. Certified mail moves at a turtle's pace. Meanwhile, Rambo should keep hard copies of his posts; others have been doing that for a long time. Rambo's "legal adviser" probably would appreciate having those to review.

> One of the prices
>we pay for living in a free society is the existence of Internet newsgroups
>which contain information we may wish was not so freely available.

America is looking at ways to regulate this powerful medium, both at the State and Federal level. This is not being lost on the ISPs. Following a court case two weeks ago where the producers of a motion picture were successfully sued by the victims of a "copycat" crime spree, ISPs began asking if the same thing could happen to them. Rambo has neither deep pockets nor a lot of influence. AOL has both.

Rambo's error is failure to recognize that freedom doesn't work without personal responsibility. It is one thing to drop comments into a NG on everything that is posted. It is quite another to go into a NG frequented by non-technical people and make definitive statements which can cause them to run afoul of the law. Rambo has done this on a number of occasions. It's time that AOL be given an opportunity to review Rambo's actions and determine if it wants to continue supporting this activity to the point of putting assets at risk.

It has been requested that FCC educate AOL officials concerning the need for an Amateur license to operate on 28.085 and about the concept of

type-acceptance for radio equipment. Meanwhile, Rambo need not defend himself in this forum. This is simply an Internet newsgroup. Each of us already has made a personal judgement about Rambo and can react accordingly.

Instead, Rambo should save his energy in case he needs to defend himself to people in authority. And he can sleep on this thought: There are Amateurs who have been building a case against him for a long, long time. Until now, he has been playing a kid's game. He is about to enter a very mature situation. He can be sure that when the questions start coming, the sidestepping and back-paddling that Rambo does in the NG won't work with the new players.

Complaints and lawsuits may or may not prevail. But either way, Rambo's "legal adviser" will be pretty busy.

You are RIGHT ON THE MONEY! The demographics of ham clubs keeps getting older, more set in their ways, and in many cases less "vibrant". And kids have WAY too many "distractions" to commit time and energy to something where the payoff is vague. It is incumbent on hams and ham organizations to PROMOTE the fun and practicality of the hobby ACTIVELY in their communities. I don't think kids have changed, I just think we need to "cut through the other noise" of life to get their attention. Then we ourselves should commit to personal involvement in helping new recruits succeed and enjoy the fruits of their accomplishments.

Colin Guillas wrote in message <36EC640E.E76F856@nrn1.nrcan.gc.ca>...

I've been wanting to get into Amateur Radio for a while, but don't know of anyone near me that can help me get started. I live in West Tennessee. If there's ANYONE in my area that'd be willing to give some time to help me get started. (show me the ropes, help me to avoid common mistakes, etc...)

If willing, just drop me an e-mail.

Thanks

At the time of this "event" I was in qso on frequency. Jamming for Jesus
John jumps in, makes noises that he want's to call and talk with w4tsu (ex
nk4d). Bill had already signed, Jamming John then proceeds to "talk" to
Bill. At which point the incredible shrinking brain KC1ZQ, David jumps in
and tells John to go ahead. The rest is history. This is his normal
operating technique. Once he has "joined in" you can expect a LOOOONG
session of "jamming for jesus". BTW John is also famous for recording and
sending tapes around to his "buds". These were heard on the air for a solid
year. BTW KC3AU's stumpjumper number is 5.

Source record: 148111

It sounds like most of the replies are from people taking your problem way too seriously. You may be taking it way to seriously. Because your wife does not enjoy the typical mindless conversation that may take place on local amateur radio, it does not necessarily mean she's a snob.

Face it... you want to spend a lot of time and money on something in which she is not interested. Can blame here for being a little put off. This is where the balance between betweeen ham radio and your family has to be considered.

My suggestions:

When you are in the car by yourself, talk your head off with anyone and everyone. Enjoy your hobby.

When you are in the car with the wife and kids, use some discretion and realize that you shouldn't be spending 100% of your time on the radio. Perhaps a headset would be a good idea.

When other people are in the car (I assume when you say "other" you are talking about other-than-immediate family) maybe that is not the time for ham radio. I tend to have my radio all the time but realize that others in my car are guests that might not be interested. I don't talk much at these times and if the conversations on the speaker start to become a distraction, I turn down the volume.

Between flying planes, time spent doing distpatching as firefighter, and of course doing amater stuff, I have learned (many others have too) how monitor more than one radio, even with the volume pretty low. That ability can be useful if you get into community service (a good net controller can run more than one radio at a time) and might help in your situation - divide your attention between a radio at low volume and the people in the car.

In SOME cases for SOME people it's MUCH easier to get on a computer and chat. Learning ham radio requires some learning and effort. No effort needed to use a computer. Most kid's parents have one and use it easily.

I believe ham radio needs more public relations.

You have witnessed illegal behaviour, pointed to illegal behaviour, commented on illegal behaviour, and described not only how the illegal behaviour was performed, but also how it was accomplished and where the necessary equipment to accomplish the illegal behaviour might be procured. Although you may NOT have participated yourself, as a Law Abiding Citizen, what you did NOT do was report the illegal activities and what you have witnessed to the regulatiing authorities. In fact, what you did called attention to those who might otherwise not have known what to do and how to do it to operate illegally on the ham bands, specifically 10 meters. As a Law Abiding Citizen you have an obligation to be a part of the solution. You chose, however, to be part of the problem. As an accomplice, your defensive posture here is not substantial. Nor would it be in the face of FCC inquiry.

Perhaps your change of heart will direct you to take pro-active steps to become a more effective citizen.

The height of geostationary satellites is *not* calculated to give them a
particular field of view. Their height is whatever is necessary to give
them an orbital period of exactly 24 hours, so they rotate in their
orbit in sync with the earth, and appear to be stationary from the
surface of the earth.

Once you know what height that has to be, you can calculate how much
of the earth's surface can "see" them from that position.

Dave

The biggest problem in converting a amateur radio service amp (or radio) to
commercial service is what is called "FCC Type Acceptance". Also the
probability of "spurs" is likely.
Just an opinion.

97.1 Basis and purpose.
(d) Expansion of the existing reservoir within the amateur radio
SERVICE of trained operators, technicians, and electronics experts.

Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc,uk.radio.amateur

I am looking mods to allow the Standard C510 dual band handheld to TX out of band.
My radio only TX's from 144 to 145.999 on VHF and I need 144 to 147.999 for use in the USA.
The radio is a "E" version and is meant for the European market.

Please send me an e-mail if you have these mods, I have searched the net but failed to find any.
73 de Colin

Take a look at my homepage for Radio mods for the FT847, Motorola GP300 and GM300 also the Kenwood TM732 and the Kenwood TH48 etc..etc.

The URL is:

http://web.jet.es/colinlowe/index.htm

>radiowave maximum length (they are ridiculous numbers however they are NOT
>infinite)?

Hans' answer was indeed really well done.

However the altitude of a geo-stationary satelite is computed by finding
the altitude at which the orbital period of the satellite equals the
rotational period of the Earth.

A satellite would not see an entire hemisphere unless it was infinitely
far away, although at 22 thousand miles it sees very nearly an entire
hemisphere. Another way of forming the question might be: how high would
an antenna at the equator have to be in order to have line of sight with a
satellite at 22 thousand miles over the pole. (Obviously, there are no
geo-stationary satellites over the pole.)

The height of the antenna would be equal to (d*tan(arcsin(r/d)))-r
where d is the distance from the satellite to the center of the Earth, and
r is the radius of the Earth. If we say the radius of the Earth is 4000
miles, and the distance from the Earth is 22000 miles, then the height of
the antenna would have to be 48.2 miles.

73, Jim AC6XG

The fewest key presses,it won't be too hard after using a straight key
but if you were used to a "bug" it would be a problem.You could always
join the 21st century and get a CW keyboard.I use an iambic paddle now
and really like it,just get a good one like the Vibroplex or something
as solid,my first one had too much "flex" and made it a lot harder to
send.AB7RS

>It's time that
>AOL be given an opportunity to review Rambo's actions and determine if it
>wants
>to continue supporting this activity to the point of putting assets at risk.
>

Some good points here. But AOL has already covered its own rump regarding liability resulting from posts originating from its members. Terms of Service allow for an errant poster to be removed from the service when it is decided that illegal activity has taken place. Terms of Service for AOL also permit the membership to be terminated for less than illegal activity, and, in fact, even inconsiderate behaviour is actionable. All that is required is a complaint. It doesn't even have to be a detailed complaint. AOL can, and if properly motivated, will, conduct a reasonably thorough investigation and take its own action. Or not at its discretion. But dont' hold your breath.

Having watched these NewGroups for the last several years, I have to say, that I haven't seen lot of actionable behaviour on Rambo's part. A lot of gray area stuff, but mostly childish taunting and posturing (he IS a disc jockey, after all.) As irritating as it might be, childish behaviour is hardly actionable. If it were, there would only be 5 people left here.

Regarding the activity in the ham bands, however....Pointing to existing activity is hardly criminal. Recommending participation in that activity is questionable, but tough to hang a charge on. Pointing to how it's done, and advising on the equipment, or even commenting on the work done by others in this arena, may be one of those areas that bears investigation. In THAT, Rambo could be at least questioned, at most held liable for advocating an illegal activity. And in THAT case, his legal advisor would , indeed, have much to handle. Conviction would not be likely, and penalties would be trivial, but it would be the start of a process that could result in loss of his ham ticket. Some questions could also be raised about the future of his Broadcast endorsed FCC ticket as w ell. And his access to the NGs could be terminated. Witness the FCC supported termination of websites, internet accounts and operating privileges of those posting illegal scanner mods. {And NO, Drew, ...I'll leave it up to YOU to look them up, :)}

It would not be pretty. Coupled with the copious number of posts in which Drew has openly announced his contempt for ARS and the fact that he ONLY retains a ticket so he can keep a scanner in his car, he would have a lot to answer for. Since FCC takes a dim view of people who retain a license but do not use the service, his license is likely to be revoked. But again, any other penalties are likely to be trivial.

> Rambo need not defend himself
>in this forum. This is simply an Internet newsgroup. Each of us already has

>made a personal judgement about Rambo and can react accordingly.

Truth, indeed. In fact, Shakespeare comes to mine..."Methinks he doth protest, TOO MUCH" Legal advisor or not, defense here is meaningless. It is defense, if and when the hammer falls, that matters. But to return to the issue of personal responsibility, it may be circumspect of Rambo to consider discretion in his advice, and comment.

Free speech isn't open ended. It has limits and those limits are based in responsibility. Childish taunting and posturing is protected speech...but speech relating to illegal activity, may not be so sheltered.

At least, for the balance of us, it should be educational, if not amusing to see how this matter shakes out.

Gentlemen, (and Ladies if present)

This Saturday (20 MAR 99) the Delta Amateur Radio Association will be attending the local Cub/Boy Scout Camporee in Cleveland, Mississippi to demonstrate what ham radio is all about, and allow the boys to operate third-party if they wish. We will be operating from 9am to a/b 1pm on several HF bands (maybe 10 will be nice to me again :) and I would ask that if at all possible, try to tune around and find us. The call will be likely be "CQ camporee", and we would appreciate any contacts. There are plans for a special QSL card, but this has not been confirmed. I hope to hear you !

6278. An Open Letter, Apology, and Final Message from CB Rambo

Newsgroup: rec.radio.amateur.misc
Date: 1999-03-16 00:00:00 UTC
From: cbrambo@aol.com
Message-ID: <19990315201345.17299.00001925@ng-fi1.aol.com>
Source record: 148036

Over the past few days, I have spent a great deal of time in reflection of my past behavior on the radio newsgroups. My conclusion is that I have wasted a great deal of time and effort engaging in pointless arguments and petty bickering with other participants here. This is time and effort that would have been much better spent on other, more meaningful pursuits. I have also come to the realization that I have offended some of you with my comments, as some have inadvertently taken my remarks in a personal manner. This was never my intention...and for this, I am truly sorry.

Contrary to popular belief, I am not a "bad guy". If you were to know me in person, you would probably say that I am kind-hearted, free-spirited, fun to be around, and generally easy to get along with. But, like all of us, I also have my character flaws and shortcomings. Specifically, I tend to be particularily stubborn at times (especially when provoked) and I am also prone to "carrying things too far" upon occasion. I like to play games, tease, and joke around...and sometimes, I don't know when to stop. This has always been a weakness of mine, and I am now working very dilligently to control it.

As I read some of my past newsgroup postings, I must admit that I am rather embarrassed and upset with myself for engaging in some of this nonsense. I have made off-topic comments here which have had the effect of causing chaos and disrupting the flow of information for which this forum was designed. I am certainly not the only one who has done this, but that doesn't justify my behavior. Lack of maturity, insecurity, poor judgement, the "thrill" of being safe behind a keyboard, and an occasional feeling of boredom in my life right now...all of these were contributing factors. Again, that does not justify my behavior, but I can see now how these feelings and character flaws caused me to behave as I did.

I also tend to get a little "touchy" when someone accuses me or implies that I engage in illegal radio operations. This is simply not true. Never has been, never will be. I am a law-abiding citizen who does not have even as much as a traffic ticket on his police record. I don't mention this as an attempt to justify my behavior, but only so that you might understand why I occasionally acted the way that I did.

In an effort to restore order and tranquility to this newsgroup, I will immediately and forever cease from posting here. I will be available via e-mail for the next 24 hours, and would appreciate hearing from those of you who have thoughts on this matter and do not wish to post them publicly on the newsgroup. When the 24 hours has expired, I will permanently delete the "CB Rambo" screenname from my America Online account and I will not appear online again. I'm sure many of you are skeptical here...and rightfully so...but time will indeed prove my sincerity. Again, I apologize to those whom I offended here and for being a nuisance on this newsgroup.

Thank you for your time. Radio is a wonderful thing. May it have a long and prosperous life. Goodnight and God bless you.

Moonbounce, meteor scatter, spread spectrum, ATV, Sporadic E, pulse -
all are modes that come to mind as not being depended upon for emergency
communications, yet you won't receive a passing score on your exam if
you choose to ignore all the questions pertaining to specialized trans-
missions.

As communicators first and foremost, you surely agree that all the
world's hams should have at least one mode in common. At present,
the one mode all HF-licensed amateurs do have in common is CW.
Phone won't work as an international mode due to differences in
languages, but we do have enough CW prosigns so that a meaningful
QSO can take place via code regardless of the language an operator
speaks. Yes, a digital mode such as packet could become the interna-
tional standard by using the CW prosigns, but until such time that
every ham worldwide has the ability to build and maintain such equipment,
CW will remain the common mode.

Daily worldwide comms don't normally take place above 50 MHz, so
the common mode up there can be chosen on a national level; for
us, of course, it's FM phone.

Very intersting comments, Peter. And to amplify the above, the FCC used
to require that we had in fact operated on the air a certain number of
hours prior to renewing our ticket. A station log would have to be pro-
duced upon demand. Inactivity would be grounds for refusing to renew.

David Bernazzani wrote:

[interesting kit building info]

>I'm sure some will laugh at 10 contacts in 1+ weeks...

Not me. Aside from very infrequent 2m simplex operation on
an HT, my only rig is a 4 watt QRP transciever with a straight
key for 40 meters. In the four years I've had it, I've had
only one QSO, and that one was prearranged with a coworker ham.

Living in an apartment, my problem is the antenna. I tried a
wound dipole, which turned out to be very inefficient. RST
from my friend 40 miles away was something like 009 :-) I have
a 1/4 wave dipole from TV cable lead, which I can string out
lengthwise in the apartment and have it elevated about four feet
off the floor. Outside the apartment are walkways and publically
accessible structures that prevent me tossing out a random wire
or dipole of any sort. With the inside dipole, my coworker 20
miles away gave the signal an RST of 419 (this is with a SWR about
1:1.1 - not bad). So, I have two ideas of how to improve things:
one would be to bundle a large loop of wire on the balcony. This
gets the antenna outside (and about 15' off the ground) and puts
a lot of wire in the air. Since I have to essentially create a
huge coil around the balcony, does this help me or hurt me? Another
idea I'm fond of would be to use one or two helium filled birthday
balloons to raise a long wire off my balcony. Done late at night,
it would interfere with no one and might even go unseen.

>So, in short, the Kit was well worth it. I got my money's worth on
>the first contact! Even just seeing the unit receive clean signals
>was a thrill.

Indeed. Sending and receiving signals through the air still retains
an element of magic to me. I don't understand how some people think
the internet is competition for ham radio. Sure, I can see web pages
from all over the world in seconds, but the network just isn't as
magical as a little QRP rig sending out and pulling in signals out
of the air all on its own.

I, too, am begining to think that Mr. Rambo and Mr. Fisher are one in the same. Like the way Mr. Rambo responded *Like you did?* when someone suggested ignoring him. He said it just like Burt does. But, Mr. Fisher proudly displays his call sign at the end of his posts. Mr. Rambo does not.

Where has Burt been these days? With all the snow they have had in the NE lately, he is probably too busy providing emergency communications, and helping people that need help, to get on the computer.

Geezuz KKKhrist, Mikey, you bitch about being called "faaggot"?!?!? <pfffft!>

Crusty Balls

So I sit and write and ponder, while the house is deaf and dumb,
Seeing visions over yonder of the war I know must come.
In the corner-not a vision-but a sign of coming days,
stands a box of ammunition, and a rifle in green baize.
And in this, the living present, let the word by through the land,
Every tradesman, clerk and peasant, should have these two things at hand.
No, no ranting song is needed, and no meeting, flag or fuss-
In the future, still unheeded, shall the Spirit come to us.
Without feathers, drum or riot, on the day that is to be,
We shall march down very quiet, to our stations by the sea.
While the bitter parties stifle every voice that warns of war,
Every man should have a rifle. And cartridges in store. (Henry Lawson)

Yea!
I had a disorder where my right had would not function well. I couldn't even
practice code.
I was about to sell all my radios when a doctor friend of mine perscribed viagra.
Now I *DO* 40wpm.

I'm much happier now.

Message-ID: <36EE4112.EFDD3EB1@ameritech.net>
Source record: 148056
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.swap

Want to trade my FT-736R 6M module for a 220MHz or 1296MHz module. Look at it, sitting there in your '736. Do you really use it? 6M is getting hotter. . . .

R599A classic Kenwood receiver, excellent condition and function - $185

TS680S - Multi mode, 160M-6M transceiver, 8 of 10 condition and 10/10 function - $575

TE 1050G 6M PA + GaAsFET rx amplifier 10W in for >100W out - $200

IC-451A in 9 of 10 condition and 10/10 function. Thinking about satellite work, or getting a transverter for 432MHz? For less money you can get the IF and transverter in a single package. - $375

I am interested in trading mostly. The TS680S might be an excellent trade for a '736 1296MHz module. . .
All prices FOB 60195.

Dear Rambo,

>>>>But this will likely come at the expense of loss of some
higher-frequency
spectrum.<<<< (In reference to the probability of new HF allocations)

Who cares, really? We have had some UHF/SHF allocations AND the
technology to utilize them for years, yet they lay dormant, save a few dozen
users.

Some of these allocations are DOZENS of MHz wide! Even if they lop some
of the UHF/SHF bands IN HALF, no one is going to notice!

The entire CW debate has been about the *HF* spectrum. That's only a few
MHz wide if you add up all 9 MF/HF bands, yet that's where everyone want's to
play, hence the big brouhaha over CW....if ALL THAT SPECTRUM that a codeless
tech has access to is SO VALUABLE, why the CW debate?

The FACT is that hardly no one gives a flip about anything higher than
450MHz. Most repeaters have become "honey do" traffic nets, or races to see
how many 2M and 440MHz machines can be cross-linked. Whoopie do.

No...ham radio is not about to die ANY kind of death...it WILL change, but
the Codeless Technician class that was supposed to save our "higher" bands has
been a failure. We may have MORE repeaters, but they are all crammed into the
two 2M subbands, 220, or 440. Where's the migration to 2.4GHz, 5GHz,
10GHz......it's NON-EXISTANT.

My guess...the day CW tests drop to 5 WPM for "General Class" privileges,
all those "IT'S TORTURE" whiner's will suddenly be able to copy CW like pros.
And watch the corresponding DROP in VHF/UHF activity, sans the drive to or from
work.

So I pose the question again...."Who cares"?

73 and don't QRT!

Steve K4YZ

> http://www.dejanews.com/ Search, Read, Discuss, or Start Your Own
Well I think alot of the hobbie is dying because there are to many other things for a kid to do these days some good and some not so good. I hope that 15 year old kid stays up on,15,17,12,and 10 meter band, because if they come down on 75 or 20 he is more likely to go back out and get into trouble. Whats the kid going to do with 50 or 100 watts on these two bands. He is going to get laughed at and told to get a signal. Tyhen ignored by the power houses. I know this to be fact. Some guys will not even say you are there even in a emergancy. Unfriendly thats another reason the hobbie is dying.
At 15 I was nuts over radio. I also think that radio kept me out of trouble with the local cops. I think it wouldn't be a problem to show a kid 9 or 10 year old the radio ststion. I think I first remember my grandaddy's ham station when I was about 5 or 6. I new then that I wanted to get involed with radio. I was a old Heathkit 102 with a D-104 mic or was it a 101. There again we were a family unit back then not like today. As it was stated the gandparents passed down the hobbies and family history. There was none of this sigle parent stuff that goes on today. I wonder sometimes how this contry is to survive as the family unit decay's more and more.
I have a 8 yr old that finds radio and TV fasanating. She was learning about CW in school and just ate it up. So as long as the FCC allows us to have parts of the spectrum I don't think that the hobbie will die. I think that we all have to do our part to play Elmer and get the word out about the hobbie, feild days, and clubs are the best way to let the public know about the hobbie. Another thing we are going to have to do is clean up our act. Not only on the air but also in all places where the public has access to Hams. I mean some of the crap I have seen here in this news group I wouldn't want my kids to see nor some of the crap I have heard on 20 and 75 meters. My wife thinks we are all abunch of low lifes. If you heard some of things that have come out of this hobbie as she has you wouldn't want your kids to even get involed with the hobbie either.
Another thing that has to happen if this hobbie is to survive is for the FCC to keep up enforcement of the ham bands. Make this enforcment very high profile. This way the public knows that the hobbie is a safe envioment for there kids to get involed with. Thats Just my opinion I could be wrong.

Geesh guys, I hope this doesn't sound too demeaning to us hams as technocrats but here is my answer;
The cost of a used HT amp right here on the newsgroups is around $50. By the time you purchased a 10dB transistor, new mounting hardware and insulator, heat sink, resistors, fixed and compression trimmers, a bit of coil winding wire, relays, a couple diodes, switching transistor, and a relay, you would exceed this amount, 'unless you had an excellently stocked junque box. . . if that is the case do a search on MRF transistor amplifiers and in about an hour you will have a schematic and PC etching template. Motorola has application notes for power transistors. You could also check the ARRL manuals at the library.
73 and email me direct if you do take this on and get in a bind,

Seems highly relevant to the UK, to me.

Naturally one expects some opposition.

Stood on any rusty balconies lately?

For the record, if Bill Clinton is a 'left-winger,' I am the Pope. Being a direct descendant of Thomas More, I think not. Bill Clinton is a scheming opportunist who played around with progressive and radical ideas when he was in college, thirty years ago. I agree that he is a habitual liar, and a bad one, and I can't wait for him to be gone. But his politics are strictly not left, by any definition of that term that makes sense. I cant understand how people persist in besmirching the cause of progressivism by calling Billy a liberal. If Clinton is a Liberal, then Johnson was taking secret orders from Brezhnev. Of course, there are some who are paranoid and illiterate enough to believe that. Clinton may mouth pieties that are to the left of the far right, but thats all. You want a leftist to throw stones at, there's Angela Davis or Gus Hall, or even lonely old Paul Wellstone and Bernie Sanders.

Probably the most surprising aspect of Heston's speech, personally, is that isn't quite the mad ramble I was expecting. I might not necessarily agree with him, but he's not out of line. He makes good points, although I can't reconcile the NRA with anything I personally believe in.

I have to agree with Charlie. The Left has really dropped the ball. It's tragic. However, we've been rather quick to forget the travesties committed by the two previous, republican presidents. A similar litany to Charlie's of Bush's and Reagan's careers would be quite impressive.

To all readers outside the USA, I hope you at least find all of this amusing. If not, I apologize. As for me, I'm fascinated by politics, and I'd love to read similar rants regading politics in other nations.

Speaking of other countries, is Canada hiring?

Sincerely,

Neil

Hello Dan
Read your post and and some of the answers. As you are discovering, most of the ham population is old, but we are not all crotchety. Congratulations on getting your general at 14 years old. I was still swl'ing at 14. If you give us some idea of what you are wanting to do, I am sure you will get a few more specific answers. You probably can pick up something at swapmeet at a better price then buying new parts. That is one of the disadvantages of being a new ham--you do not have a garage full of "junk" that you have accumulated over the years that can be used for projects. Why not sidle up to one of the old timers with a known junkbox in the Tristate club and tell him what you would like to build. Ask him for some ideas--if you are lucky you might just strike a goldmine in parts and advice at the same time. Cross posting to so many groups is usually not productive.

I thank you for your thoughtful reply. Further follow-ups can go to me
at myoung@interaccess.com.

David Stinson <arc5@ix.netcom.com> wrote in message
> > You only need to feel morally outraged, and to express it loudly
> > everywhere and to everyone. If they won't listen,
> >do everything you can to hinder them.
> Explicitly untrue statement.
> Heston: "But what can you do? How can anyone prevail against
> such pervasive social subjugation?...
> You simply ... disobey.
> Peaceably, yes. Respectfully, of course.
> Nonviolently, absolutely."
> Clearly, Mr. Heston has not advocated doing
> "everything you can to hinder them."

Heston, in his own words:
"When a mugger sues his elderly victim for defending herself... jam the
switchboard of the district attorney's office.

"When your university is pressured to lower standards until 80% of the
students graduate with honors . . . choke the halls of the board of
regents.

"When an 8-year-old boy pecks a girl's cheek on the playground and gets
hauled into court for sexual harassment . . . march on that school and
block its doorways. When someone you elected is seduced by political
power and betrays you . . . petition them, oust them, banish them. When
Time magazine's cover portrays millennium nuts as deranged, crazy
Christians holding a cross as it did last month . . . boycott their
magazine and the products it advertises."

These imply judgements in haste from factoids presented in mass media.
Certainly there are public acts that cannot be misinterpreted. It is
quite something else to call on you to act on the scant knowledge
filtered through the evening news.

By themselves, this quote and Heston's "moral compass" snippet are
relatively harmless. However, they say very different things. The first
calls on you to express your liberty; the second directs you to act
against the targets selected for you. Combined, they implore you to
accept the judgements presented by the press, and act harshly and
decisively. Perhaps to a cognizant majority, the unspoken step of
evaluating what you *don't* know versus what we are told is clear, if

implicit. However, I lack the faith that the majority habitually exercises independent thought or judgement. Your words, and the mere fact that you were moved to respond, say you share at least this much of my cynicism.

> I submit that this response is typical of conditioned responses
> brought about by the tyranny of thought that
> masquerades as "liberalism" today.
> Tyranny doesn't always wear a swastika.
> Sometimes it wears sheep's clothing and calls itself "liberal"
> while ruthlessly attacking those who's opinions differ.

You've obviously mistaken me for something I am not. This is easily forgiven, as you know me only from the few words I wrote. I find it ironic that your rush to judgement here is precisely the example I sought above.

> (Personal and unsupported attack against Mr. Heston deleted.)

Heston: "Underneath, the nation is roiling. Americans know something without a name is undermining the country, turning the mind mushy when it comes to separating truth from falsehood and right from wrong. And they don't like it."

Heston: "So that this nation may long endure, I urge you to follow in the hallowed footsteps of the great disobediences of history that freed exiles, founded religions, defeated tyrants, and yes, in the hands of an aroused rabble in arms and a f ew great men, by God's grace, built this country.

I stand with my likening of Mr. Heston to a "loose cannon". It was not a personal attack. A loose cannon on the rolling decks of a frigate at sea is a danger to everyone. A call to arms -- I interpret his speech as thus -- with no clear target, in the name of liberty and democracy, is likewise dangerous. To counterpose, I asked only that we take the time to evaluate before acting.

Maybe he is right, and I am wrong. Maybe action, any action, is better than the paralysis of uncertainty. In a colorful world often portrayed in black and white, there is a large area of un-black and un-white, and TRUTH lies there, not in these fringes. He urges you to pick a cause, any fair and just cause, and act. I urge you to consider the undue harm you may cause in your zeal, and temper this need to act.

Michael.

>Heston, in his own words:
>"When a mugger sues his elderly victim for defending herself... jam the
>switchboard of the district attorney's office.

The left wing advocates what? Feeling the muggers pain?

>"When your university is pressured to lower standards until 80% of the
>students graduate with honors . . . choke the halls of the board of
>regents.

The left wing, which finds a comforting home - if not its very roots - in the hallowed halls of education, tells us that lowering standards rather than demanding excellence is justified. After all, it gives the student "high self-esteem". The fact that we routinely pass students along to the next grade, with serious gaps in their skill-set, doesn't indicate a problem in the school system. It simply means we have to spend more money on it.

>"When an 8-year-old boy pecks a girl's cheek on the playground and gets
>hauled into court for sexual harassment . . . march on that school and
>block its doorways.

Yes. No doubt he's just learning how to oppress women. After all, according to the radical left, that's every man's calling.

When someone you elected is seduced by political
>power and betrays you . . . petition them, oust them, banish them.

The left wing suggests you just re-elect them. After all, a Democrat - ANY Democrat is better than ANY Republican, regardless of their conduct.

>These imply judgements in haste from factoids presented in mass media.
>Certainly there are public acts that cannot be misinterpreted. It is
>quite something else to call on you to act on the scant knowledge
>filtered through the evening news.

The left wing, typical of liberals, doesn't have the faith in your ability to understand the politics of the day. Rather than believe that you would actually have some idea of what you are protesting, before you risk your reputation or even arrest, they will believe that you must be a robot, marching on orders from the secret headquarers of the Vast Right Wing Conspiracy.

Of course, this is in keeping with the Big Daddy Government philosophy that the left wing promotes. WE need to take care of YOU, because you're not smart enough to do it yourself. More government regulation will do the

trick.

>By themselves, this quote and Heston's "moral compass" snippet are
>relatively harmless. However, they say very different things. The first
>calls on you to express your liberty; the second directs you to act

>against the targets selected for you.

A paranoid interpretation at best. A deliberate misrepresentation at worst. He simply suggests that you no longer passively tolerate the outrages that the left wing has heaped upon our society over the last few decades. Political Correctness is just the latest of many.

Recall if you will, the period of our American Revolution. A battle incited by men of position and wealth - men who had EVERYTHING to lose. One of those men, Benjamin Franklin had a remarkably insightful quote on this topic. He said "He who gives up a little liberty in order to gain a little safety, deserves neither". We're well advised to stomp out this disease of "political correctness", that threatens to stifle the free exchange of ideas - and to do it while we still can, hopefully (with apologies to George Orwell) sometime before 1984.

And yes, it's off topic, particularly to those outside the USA. My apologies.

Charlie, KS1C

What a SHAME that critics of the NRA so EAGERLY assume that all it's about is nasty GUNS! Fact IS, the NRA is about individual freedoms and the rights of ALL, combined with access to the tools, to most properly maintain it - as outlined and established in our country's Bill of Rights - the rights of INDIVIDUALS! The NRA, and its members basically feel that without the "enforcement" capability provided by the second amendment, all the rest are uninforceable when push comes to shove... Sort of what would happen in civil law enforcement if we only had police, but no judges or prisons to actually ENFORCE controls upon those who disregard our laws.

Not sure WHERE this non-sequiter came from - Heston's comments were aimed at opposing philosphies of our society, not individual Presidents - did you perhaps feel a twinge of discomfort due to your political affiliation?

>Speaking of other countries, is Canada hiring?
>

UMMmm - well, I would suppose that if you are deeply inclined to seek out and become a part of a country/society more involved in the idealogy that all you have, are or ever hope to be, MUST be provided and controlled by a government "caretaker", Canada WOULD be a good place to start...

Wammes,

I understand and respect your opinions, but Mr. Heston's speech had far
less to do with the NRA and far more to do with moral and intellectual
honesty. There are other rights that we enjoy and should jealously
protect. Our rights to think and speak as we please are among them.
Try not to let your opinions about something cloud your judgement and
ability to reason clearly about others.

Russ Nixon - KF4WXD

Hello, the ICOM 706 Discussion Group is continuing to do extremely well. Being this is such a great mobile HF rig, I have decided to giveaway a HamStick mobile antenna each month to those that register for the free drawing each month.

Folks, Amateur Radio is a fantastic hobby. Mobile operations is getting better everyday!. Let's all get talking mobile.

Come by http://vartel.com/icom706 and see what all the fuss is about with the ICOM 706.

See ya there!

here they hold the various classes and exams needed to get whatever permit you need to get.

most hamfests don't even have a facility to conduct exams available, let alone try to hold a cram class.

the gun shows here are a big time commercial venture with prime time ads, sandwich boards spread around for directions, etc.

>violent crime then some countries where guns are easier to get..

Jon Pearl Replies...

Handgun crime is on the decline here in the United States. We have vast numbers of guns.

Home invasions in the U.S. are on the decline. Burglars know that their fate is in the homeowner's hands.

Handgun crime is on the decline in the United Kingdom also. In fact their citizens no longer have the ability to maintain ownership of guns.

Home invasions in the U.K. are soaring! Burglars invade, day or night with impunity!

The weapons of choice in the U.K. have now become, fists, blunt objects, sharp objects, etc.

Violent crime in the U.K. is on the rise. Citizens no longer have the 'tools' to protect themselves.

Your country is beautiful and it's people are a testament to modern society and civility.

You might also be interested in noting that there is a government issued semi-automatic rifle in the homes of most Swiss citizens. Switzerland's crime rate is very low.

Actually the Melbourne Hamfest (PCARS) is one of my favorites. I can do
the whole thing in one day and still feel like I can stop and shoot the
bull with people when I am there. The Orlando Fest has gotten way to
big and commercial. Too crazy.

Wammes, I admire your courage to wade into this off topic discussion and
appreciate a view from across the pond. Your comments are well taken and
I don't mean any disrespect at all. However, I, as an armed US citizen,
can tell my government to go to hell if they insist on making me do
something that is unconstitutional. You can't do that in your country!

I agree that lazy is a poor choice of words. Not interested is the better choice. The mystique that radio once held for me (30 years ago) is simply not there anymore. Technology and the internet have rendered radio communication antiquated. While amateur radio still provides very valuable service when disasters strike, the cellular phone has all but replaced the HT for emergency services. Instead of calling our young people lazy, let's provide them with a reason to become interested in our hobby. We need fresh blood and fresh ideas. If we don't, this hobby will surely fade away.

>> Not really. Evidently you never heard of W4EBG back in the
>> 50's-60's

Wow! That call sign brings back a bunch of memories. I used to hear that guy on night after night in the mid sixties on or around 3850. He formed the nucleus of the same programming format which can be heard on 14.313 during the day and on several frequencies on 80 meters at night. In the sixties, the big racket was the sidebanders against the AM users. W4egb, who went by the name of Kahn or maybe Con which is what it sounded like lived in Paduka, KY and had a fabulous signal almost any night. He ran the full gallon and maybe a bit more for all I know on 80 and was, to say the least, a character. Just as is the case today, he and a large group of folks would feed on each other's pathology and scream insults, jam, and curse one another as long as propagation and the blood ethyl alcohol contents allowed them to transmit. Maybe somebody is familiar with the details, but I just remember hearing W4EBG and hearing about him around 1965 when I got a short wave receiver and began listening to ham radio. Just as now, the comments were pretty much the same such as, "Can't somebody do something?" "Man! such language!", etc.

I can't remember a time when there hasn't been a bunch of hot-heads hanging out on one or two frequencies on 80 after dark and making lots of noise.

I'm not even sure there is more of it today, but it seems to go on longer but I wouldn't swear to even that.

It takes at least two to tango and none of these famous or rather infamous souls would have gotten the notoriety they have gotten without others to fan the flames. Last weekend, I was listening to an almost sensible QSO on 14.313 when somebody started up the anonymous cat calling and whispering of obscenities. The two people who were having the QSO said not one single word about the racket and the whisperer finally got tired and went back to telemarketting or whatever it is he does when not on the air. I think that's the secret to stopping a lot of that stuff. Silence is a show-stopper for the weirdos because they can't gauge their audience and are not even sure they have one. Nobody likes to play to an empty house.

Well, I don't plan to work pileups from the mountain paths of Tierra Del Fuego
or anything really attention consuming like that. I just want to be able to
exchange short comments with my riding buddies, who sometimes run way ahead or
behind the pack.

This was the best tip I got, LOTS of great info here (Thanx Bryce!)

I am certainly no fan of the ADL but if you can't prove what you just
posted I hope the ADL sues you for slander/libel and WINS.

from the little I know of the cases you mention the hams in questions
do not seem to be true conservatives.
I am a conservative and conservatives believe in the rights of others
and in obeying the law. We [conservatives] would never condone the
actions of jamming and filfth that the hams above have been accused
of. From what i have heard I would not call them conservatives
...racists and nazis perhaps but not good conservatives.

Hams can operate as they do now [within the law].
They can NOT broadcast but they can handle emergency traffic and
conduct QSOs and stay active and prepared to lend a ham thru their
local emergency coordinators.

M.A.R.S. does not operate much on FM mode do they?
I thought it was mostly SSB. and I do not think that a MARS op would
use a VX-5R radio for MARS work. They deal HF mostly.

Hi
I'm taking the Ham test this weekend, and hope to have at least a
technician's
license by Summer.

I also have a small sailboat which I intend to sail from Houston to
Corpus
Christii in June. I am wondering about the availability of a Marine VHF
net
in this area.

I'd also like suggestions about what make of radio I should get that
works the
marine VHF bands.

Maybe if you had read the article you would understand what's going on. While it is partially about America, it is more about the politicians and other scumbags trying to take away our rights. And that includes Amateur Radio!! You have to stand up and speak your mind sometimes instead of just following like a bunch of sheep. Don't take it for granted that what you are doing today, be it radios, guns or whatever, is always going to be there.There are to many instances in history where peoples rights have been taken away, and many times it was because they didn't have enough guts to stand up for what they believe in. So first, get a clue and read something before you get indignant, and start spouting off a bunch of nonsense that you don't even know what you're talking about.

6359. NEW POSTER!!Re: Wife says hams are lowlifes HELP?

Newsgroup: rec.radio.amateur.misc
Date: 1999-03-17 00:00:00 UTC
From: Arrowsflight *FCIDC* <arrowsflight@my-dejanews.com>
Message-ID: <7cpcsb$a6o$1@nnrp1.dejanews.com>
Source record: 148013

Ok, just to introduce myself, my name is Aileen, though my nickname used on here at deja is not my callsign. Anyway, I thought I would take this time to answer this post subject, since I can intercede on it from a DAUGHTER of two HAMs, and now a HAM herself, about wives and husbands and amateur ham radio.

Ok, granted I may not be a married woman myself, but from what I saw in the past years (for this I'll say about two and a half), it's amazing what can happen. When I brought up to my father that I wanted to learn what it takes to become a ham like him, he was happy. My mother watched on, and amazing enough, all the years she has watched when my father has been shacked up in his room for the contests and talking in the car to other hams, she actually took the chance and secretly practiced for the tests with me!! It was really neat. Especially when I went to take my test, and fill out the information, while my mom did right beside me and shocked the begeezes out of my dad. My dad holds an extra class license, and has been doing ham radio since I was born (and I'm almost 20...), and has been married to my mother 25 years now. My mother never complained about ham radio (except for those contests when all he came out for was a beer and/or food!), but then, circumstances I'm sure will vary in any case.

SO I guess in a sense I'm saying for any of you, male or female, whether you are married or single, enjoy this wonderful hobby! And perhaps, even after a long span of years, they may finally (your significant other) start to show some interest in it as well! After all, nothing better than doing ham radio together!! And even if they don't, just remember that it's your hobby, and be equally understanding of any hobby they may have that involves as much time (and *gasp* money?? :)) as you may invest in ham radio.

Like I said, I'm not married, so take this information not necessarily as advice, but more like an example. But I have found ham radio to be not only a essential part of my college experience (I'm a sophomore who is benefiting from receiving a wonderful Ham radio scholarship), but also for the sake of emergency and habitual use (Let someone know where you are in traffic, talk to friends/buddies you may not get to see normally, spread local news or concerns, and so many more!). It's so nice to hear my parent's voice over the radio when they are over 90 miles away and on the road heading to pick me up for break. It's partly a reassuring factor too.

Thanks for taking the time to read my post! Keep in touch, and hope to meet more of you on here. (Yep, I am a newbie to this newsgroup!) Have a good St. Patrick's Day too.

As always, Arrowsflight or 'N3YAC'

The main difference IS the name but the features are the same and the
microproccesor is slightly different and the older ones are in my
opinion more reliable.I don't think much of these when compared to other
radios of this type.AB7RS

Left-wingers have a remarkable capacity to find absolute evil in a conservative who talks about morality, decency and the self-sacrifice that's necessary to stand up for what is right.

Just remember, many of these same left wingers rose to the defense of our "president", who:

- Smoked pot, but didn't inhale.
- Didn't dodge the draft.
- Never got any loan from the Whitewater deal (although the canceled check turned up later)
- Didn't have sex with Jennifer Flowers.
- Has no idea how NINE HUNDRED FBI files got in to the White House.
- Didn't lie under oath in the Paula Jones lawsuit.
- Received (through Al Gore) political donations from the Bhuddist nuns, in sequentially numbered checks, all made out for exactly $5000. All completely legal, of course.
- Didn't respond to those donations by personally overriding the objections of the Pentagon and State department, allowing Loral to sell previously restricted missile guidance systems to the COMMUNIST CHINESE.
- Didn't have a sexual relationship with "that woman, Miss Lewinski" (wagging his finger in righteous indignation).
- Said, with a straight face, "it depends on what the definition of "is" is".
- Didn't rape Juanita Broderick - at least we assume he didn't. He simply won't respond to the allegations.

It was the liberals who in the past stood up against the war in Vietnam, racial oppression and corruption in political office. It's interesting - and very sad - how they've abandoned their principals and redefined hypocrisy. The fact that someone could read Charlton Heston's speech and interpret it as a call to "inciting others to join their madness" tells you just how twisted their reasoning can be.

It's 1984 already.

With regrets,
Charlie, KS1C

The same situation happened when I bought two CB's back in 1995 - bought at the exact same time at the same store, one was a Realistic and one was Radio Shack. They seemed otherwise identical, except the serial number on the Realistic model implied it was manufactured much earlier.

I had the impression RS is phasing out the Realistic label in favor of Radio Shack. I haven't found any differences in function or in specification. It sounds like the model your friend got had been sitting on the shelf for a while.

I believe the Realistic brand name was replaced by the Radio Shack brand name in 1994. Check the little white date sticker on the transceiver and on the box it came in.
A 2A4 code, for example would indicate a February 1994 manufacture date.
Probably a case of the new manager cleaning up the stock room....

I know this is off topic.
I know-- I'm a baaaad boy.
It's also important.

I wasn't going to say anything else, but Mr. Young's statements
need an answer. They are protected speech-- he has harmed
no one by his opinion, and they are understandable given
modern conditioning. So please don't flame him!
But free opinions are not always correct opinions.

Let us allow Mr. Heston's own words to answer Mr. Young's charges:

Michael Young wrote:
> Chuckie is advocating mob action, not independent thought or counsel.
> Not once does he admonish you to get the facts and weigh their meaning.
Heston: "I want to...re-connect you with your own
sense of liberty ... your own freedom of thought ...
your own compass for what is right... Who will guard
the raw material of unfettered ideas, if not you?
Democracy is dialogue!"
To any person not pre-conditioned to a certain attitude,
this is a clear call to honor your independent thought
and to debate that thought. Moreover, he presents some of the facts
through example and metaphor throughout the speech. The need
to weigh them is implicit in their presentation within the
context of the above quote.

> You only need to feel morally outraged, and to express it loudly
> everywhere and to everyone. If they won't listen,
>do everything you can to hinder them.
Explicitly untrue statement.
Heston: "But what can you do? How can anyone prevail against
such pervasive social subjugation?...
You simply ... disobey.
Peaceably, yes. Respectfully, of course.
Nonviolently, absolutely."
Clearly, Mr. Heston has not advocated doing
"everything you can to hinder them."
I submit that this response is typical of conditioned responses
brought about by the tyranny of thought that
masquerades as "liberalism" today.
Tyranny doesn't always wear a swastika.
Sometimes it wears sheep's clothing and calls itself "liberal"

while ruthlessly attacking those who's opinions differ.

(Personal and unsupported attack against Mr. Heston deleted.)

>I went there looking for something of substance;
>whatever it was you saw, I missed it entirely.
Attitude conditioning from television and
modern academia prevents actually seeing what is clearly written
and generates a conditioned, knee-jerk negative response.
The quote about "hindering" above is a good example.
This doesn't mean the person making the charge is "bad."
It means they are unfortunately influenced by these decades
of conditioning. They are intelligent.
They will come around in time.

Kind regards,
David Stinson

Wow, words of wisdom from a no coder.
What does land mobile, marine, and airplanes have to do with amateur radio? Can the FCC contact you at the address they have on file for you? Take a peek at part 97 O Wise One and see what the FCC has to say about that. Do you ever get any Qsl cards? Probably not, seeing as how it's rare to get a card for a repeater contact, especially if the address listed on the database isn't correct. Also, there is a local repeater with a voice ID'er with a woman's voice saying the callsign, but I have never heard a woman with the name of Jeff , which is the name of the control operator. Who really gives a rat's ass anyway, I sure as hell don't. You mentioned marine, I assume you mean boating, sailing,etc? I would sure feel stupid calling left and right port and starboard in daily life, but it is perfectly acceptable in the marine world. So what's the big deal calling yourself by your callsign, it's expected in the amateur radio community.
Signed, N0EE (look it up," Lisa,"(is that your name, or your "handle") if you need more info).

Actually when both parties are considered, COD is probably the best way to ship. As the shipper, I hesitate to ask someone to send me several hundred dollars up front. How can they know that I will ship anything. As the shipper the worst I can do is pay cod fees and don't we all take some risk when we deal via the internet? I wouldn't consider any other method as shipper or receiver.

From what I gathered is the station must be licensed to transmitt in the amateur radio Band and the individual that is running the station transmitting in the amateur radio band must also have a license..That sounds clear to me. BUT, when you ID you station with your station CALL SIGN. aren't you telling people who you are and if you have the privledges to transmitt on that portion of the band? also when someone calls you back using your call doesn't it identify you.. Ex: KD6ELA This is KA8TOK this in turn want you to respond hence you are being Identified by call not name.. Let's face it a Radio is not going to ID itself without some form of voice or code ID set up by a human being and it's true most stations are IDed with a call sign and that call does ID the individual that Has the right to those Frequencies that are assigned to them by there License Class for that call. If it were not so then how do you explain Amateur radio Call books or CD-ROMs?

I've been using an iambic keyer since 1966 of one type or the other. I think the main advantage of this type of keyer lies in its memory; it cleans up your timing errors wonderfully, particularly a type B system that forces one to send 'good' code.

As far as the "squeeze" technique of using an iambic keyer, I've only known one ham that really had the technique down pat and he could 'squeeze' out 50 WPM without effort. I tried to learn it, thought it was a waste of time and so still slap the paddles like a bug. Supposedly one test of good squeeze technique is to send a word like "CRACKERS" which only takes six squeezes and two single-actions for the E and S.

Check out MFJ's site on keyers at http://www.mfjenterprises.com/keyers/ their prices are pretty fair for someone just starting out. Their web page also explains the difference between type A and B systems. Interestingly enough, I can usually tell what system an operator is using by the type of keying mistakes they make.

I think we can attribute the iambic keying system to Tom Pickering W1CFW (believe he's now W1GO) who authored the "Micro-Ultimatic" article in June 1966 issue of _73_ magazine, designed with the then contemporary RTL integrated circuit.

Of course, the ultimate keyer is a keyboard, either dedicated or one of the computer software types. The biggest problem with a board is that both hands are busy and you can't scratch yourself, pet your cat, drink beer, etc...

Ken,

If you are looking for an inexpensive way to get on the bands, you might check around for a used Kenwood TS-520/820 or a Yaesu FT-101. They tend to come up for sale fairly regularly on e-bay and the newsgroups. Although a bit dated, those radios are solid performers and great for CW, with about 150W output power. I use a FT-1000D now, but my 1977 TS-820 still works fine.

An even less expensive way to go would be to get or build a QRP transceiver. But if you are new to the bands, I would stay away from QRP, and save that additional challenge for later in your ham radio life.

Thank you!! Our education system is not that bad, but I DO think that
intensive practice of a foreign language helps a lot.
As far as I am concerned, I use computers since I am 11, and I am now 22.
The use of computers implies a good level of vocabulary.
Later I discovered the Internet.
Of course it helps to browse many web pages in english.
Last but not least, the HF bands are a very powerful tool, I mean you can
listen to radios broadcasting, amateur QSOs!!
(I just realized it would be cool to learn Morse code...) :)

I thought my CALLSIGN was identification enough. For crying out loud, you can look up my name, street address, e-mail address and birthdate from that one piece of information alone. I don't post a reply-to address because I have no desire to be overwhelmed with spam in my mailbox.

Aside of that, it's an interesting thread. If you can somehow read it and find a way to be offended, it's YOUR problem, not mine. Democracies thrive on a free exchange of ideas. I'd not normally have responded in an off-topic newsgroup, but this is where the thread appeared. In fact, the Heston speech has been making news all over the country, so it's of some interest here.

Interestingly enough, that's one of the features of "political correctness". The new whining class demands that you not talk about something, or use their new PC terms because they find it offensive. You might want to go back and read the Heston speech.

In the mean time, stop your whining, and don't read posts that don't interest you.

This time I won't apologize.

Charlie, KS1C - that's the CALLSIGN, which completely identifies me. KS1C.

If you have a special interest such as spread spectrum, find an appropriate spot in one or more of our bands and get a group going. This is similar to moonbounce, satellite work, and even AM (gasp). If it "catches on" like RTTY and Packet, great. If it does not become a "popular" mode, you still get to experiment and share ideas with other enthusiasts.

>I have found ham radio to be not only
>a essential part of my college experience (I'm a sophomore who is benefiting
>from receiving a wonderful Ham radio scholarship),

What a great post, Aileen! I got a lot of encouragement from this. No, not the part about family members getting their ticket, someday (although that part was very good). The really encouraging part is how well a sophomore in college can express thoughts in written form. Spelling, punctuation, sentence construction--I give you high marks. We've been hearing so much these days about students who download term papers from the Internet, or college-level folks who cannot write simple sentences clearly, that I fear for the next generation's ability to communicate.

As a result of your excellent writing skills, the information you wished to convey was received clearly by your readers. And that, like radio, is Communication.

Keep up the good work! Congrats also to N3XWS for joining you in the hobby. I know Forrest is proud!

The Super Scanner antenna is a interesting concept. The antenna has
three dead spots and can only be used vertical. The antenna for its
price had no gain. I think that one would be better off with a 3 element
yagi and a rotor. You can put one up for about the same price. I will
say one good thing about the Super Scanner if one was in a tight area
and wanted a directional antennna a Super scanner would work there.It
would seem to me, if you cut a Superscanner for 10-meters you would have
to cut the elements, shorten the three booms, and you would have to
shorten the RG-59 matching coax. Good luck I have no idea what the
antenna would be like on two. Build yourself a quad and be done with it.
You would be alot happpier.

(By the last line, I'm assuming you're a brother officer? PBA Local 16 and FOP Lodge 111 (NJ) says Hello.)

I used the A/S Super Scanner on CB and 11 meters years ago. When I got my ham ticket in '88, I modified it (shortened the elements a bit) and it worked very well...was broadbanded, too. It covered most of the 10m band without a tuner. I then turned it horizontal and used the
RadioShack TV antenna rotator with GREAT results! I think it's a very worthwhile endevor to modify/build one for 10m. Even for 6m I think the concept would work if the correct element length and spacing could be obtained, but for 2m even with proper length and spacing, I'm inclined to think a yagi, even a 2,3, or 4 element (still being rather a small antenna) would probably out perform the S.C. concept antenna. If you need the A/S 3-position switch and mast-mounted relay box, I think I may (50/50 chance) may have one in a dark, dusty and potentially scary corner in the bowels of my basement/dungeon. Once again, on 10m during a good solar cycle, the A/S horizontal was a kick and a half. Have fun (that's what it's all about...oh no, there I go again! I forgot, ham radio is a service to our community and country. It's not supposed to be a fun hobby! So, don't have fun. Just do it because who knows, all the cell phones in the world during Armageddon might not work and Ham Radio might be the only way to communicate to the rest of the world...just don't have fun!)

The Charlie I was referring to was the Charlie who wrote the post I was
respondingto. Sorry for the confusion. I am by no means on a first name
basis with Mr. Heston
and certainly wouldn't call him Charlie. If I were being derisive, I
might have called
him Moses, but I was being respectful and complimentary. His speech was a
dignified
expression of opinion.

As far as any twinge of discomfort or political affiliation, I have
little of either.

Hello
Well good luck on your scholarship. I wish that it was thaat easy for me but my wife thinks that the radio is a pain in the ass. Most amateur operators she has had contact with are lowlifes. I mean when they attack her to get to me. Now thats pretty bad. She feels gulity killing a fly she is so kind. So I don't think that I will ever have the joy that your dad knows with the XYL getting involed with the radio. I have two girls now that are still at home and the youngest seems to have a interest. She is only eight so I let her alone with it. I don't want to force the issue. I need to get a code osc. I want to teach her code to see where that leads. My dad tought it to me when I was 16. He was a radio operator operator in the navy. He never got his ticket. My grandaddy was the amateur radio operater back in those days. That is how I got exposed to the service (hobbie).
I mainly hang out on 10-meter AM 29.025 and on slop bucket 28.440 Mhz. I have antennas up for 160 75 40 11 10 meters. I mainly stay on ten. It seems to be the most friendliest band of all of them with 75 being the worst. I was real active on 75 till I got taken advanage by so called friends and attacked and slandered by others because of the company I kept on 75. I didn't sign up for that. So I more or less try to stay away from that kind of trouble. 20 meters is a good band for propagation but the band is so crowed that finding a clear spot to call CQ is almost impossible and the guys there aren't real friendly so I went so far as taking that antenna down. I haven't got any thing up for 12 yet but that can be a fun band like 10 too.
Basicly in this little rant you can see why my wife thinks hams are lowlifes.

Now, now, cost-effectiveness isn't the only reason to homebrew, is it?
Without wanting to start a thread on the philosophies of homebrewing,
it must nevertheless be stated that the desire to build need not come
solely from a desire for economy. Such a view, stated alone, reflects
an egocentrism on the part of the speaker/writer.

> if that is the case do a search on MRF transistor amplifiers and in about an
> hour you will have a schematic and PC etching template. Motorola has
> application notes for power transistors. You could also check the ARRL
> manuals at the library.

Now, here is the egocentrism-destroying part! Well written, Art.
Don't forget that the 1998 version of the ARRL handbook has an article
in it on a 2m amp using one of those RF power modules.

There's also a guy on qsl.net who parallelled 4 (count 'em, 4) 70cm
power modules to make a 100-watt power amp. Go to www.qsl.net and
perform a search for "amplifier" to find it... Interesting stuff!

I have the W-32A with the HM-75 mic. I love it! No problems with either one.

Some 2m ham radios don't need to be "hardware" modified to cover marine VHF. You can enable this by
pressing certain keystrokes or codes. But they aren't type accepted there.

> VHF for it's purpose and the ham radio for it's. With a no-code tech
> license you can use any allocated frequency above 50MHz. 144- 147 Mhz is
> the popular band.

144-148 MHz is 2m the band. Only CW in the lowest 100kHz though. 70cm is becoming very popular as
well.

Steve

You might be better off "homebrewing" a beam antenna. Much less work
and cheaper too.

I believe no problem is so large or so difficult that it can't be blamed
on somebody else.

6410. Please Register Your Favorite VHF/UHF Simplex Net With Our database!

Newsgroup: rec.radio.amateur.misc
Date: 1999-03-18 00:00:00 UTC
From: "John L. White" <jwhite@materials.com>
Message-ID: <36F15604.DBC669C9@materials.com>
Source record: 147908

Please visit: http://www.materials.com/N4IFC.htm and follow the link to our "Register Your favorite Net Here".

We have just started displaying some of the nets we have received! Please check out this page also at "View The Database Here". Don't be disappointed... It's just a very few so far. But, some of these may be in your region. If not... Tell us about the ones that are!!! Regular updates will be made at intervals of every several days up to a week - time premitting...

We have taken on the task of cataloging all of the Simplex VHF/UHF Nets around the country. The purpose of this effort is to increase the usage of our VHF+ bands for simplex and/or weak signal purposes. In most areas the 6 meter, 2 meter and plus all mode simplex frequencies are seemingly "dead" except during contests. But, this is an illusion. All you have to know is where to listen and when. There are literally thousands of nets in operation at all times of every day. Please help us catalog these by submitting all such nets that you
can provide accurate information about! It will only take a few minutes of your time and the collective reward will be tremendous for our hobby!

Please "Tell a Friend" and publicize this effort over local nets and at club meetings. To be successful we need to grow our database enough to be of general interest!

Thanks!

N4IFC
John

6411. Re: Wish I Could Broadcast This

Newsgroup: rec.radio.amateur.misc
Date: 1999-03-18 00:00:00 UTC
From: rl1856@ix.netcom.com
Message-ID: <7crpmh$8tk$1@nnrp1.dejanews.com>
Source record: 147909

I find the "liberal" reaction to Mr. Heston's speach interesting.

Rather than directly refute the points he makes, "liberals" instead attack th
person, as if he is beneath consideration because of the opinions he holds.

Based upon the "liberal" reaction, only those from the left are worth
listening to.

To amplify what "Charlie" <no@spam.net> posted, the same people that
condemned Clarence Thomas when he was nominated (based upon heresay
accounts), demanded the resignation of Robert Packwood before any cases were
brought to trial, engaged in character assasination of both Paula Jones and
Monica Lewinsky, are the same people who refuse to consider the points Mr.
Heston makes. Why, because Mr. Heston is a conservative.

The crux of the matter is that we have a group of people in this country that
hold very influential postions and feel that they have the right to tell us
what to do and think. These people have the power to control what we see and
hear regarding what happens in our country and the world.

Bottom line is this: "PC" stands for propaganda and censorship.

A generation ago, "liberals" fought for the rights of the disenfranchised and
wanted to engage the country in free speach. Ironicly, it is the
conservatives that are now champions of free speach and are waging the
battles to preserve our individual rights.

There is a lot to consider in Mr. Heston's speach. Now if only people would
leave there preconceptions behind.....

Ross Lipman

rl1856@ix.netcom.com

Oddly enough, there are also parallels in this newsgroup. Take a look at the
A Jute/ M Lefevre wars. One side telling the other to shut up (in effect),
without a proper debate of the facts presented for ALL to see.

Sorry for the ramble.

Whoa, Boy! This is USENET (not the Main Media News) and we still value freedom of speech. Lawsuits, whether valid or not, are forms of intimidation which, in the case of USENET, would serve to work against the free exchange of ideas. I'm sure you will agree that in principle our freedom to speak is much more important than our emotional satisfaction, whether you and I like the particular ideas expressed or not.

Excuse me. I must not have seen your Net-Cop badge.

It's people like you, who look for reasons to be offended wherever they can find them, who are at the very crux of this issue. Political Correctness isn't limited to the USA. I travel extensively and have observed the same kind of nonsense in other countries. The new "whining class" proclaims some slight, real or imagined, and demands reparations or some other advantage over those who may - or may not - have been the perpetrators. Whether those reparations involve hiring quotas or suppression of free speech, they're an assault on basic liberty.

The fact that you can find offense in the term "the country" gives an excellent example. It's a pretty reasonable term. Given that this newsgroup is overwhelmingly populated by people from the USA, you might not be surprised to find us talking about things that concern the USA, in the same terms that we would use in common conversation in the USA.

However, you CHOOSE to see that term, and scream and stamp your feet, implying that we are the ugly American imperialists. All over the term "the country". Yes, it's an international newsgroup, to be sure - and somehow, all of the vast numbers of international readers found no offense in my term "the country" - all except Wammes Witkop. Congratulations. You're one in 6 billion.

The reason I used the term "whining" is because it fits precisely. And no, you will NOT tell me where and when I can talk, nor will I take the discussion to e-mail.

People like you are not worth the time or effort to educate.

Welcome to the kill-file.

> Charlie, KS1C - that's the CALLSIGN, which completely identifies me. KS1C.

I realize that many hams are proud of their call signs. I like mine. I
even have on my car's license plates...

But why are we so hung up on "callsigns"? An amateur call sign
identifies the station, not the operator. I have always found this to
be a wierd thing about hams - I was involved in land mobile, marine, and
flying airplanes before I got into amateur radio. Never met anyone in
those services that introduced themself by their licensed call sign. I
identify myself on and off the air with my name. I identify my station
with it's call sign.

And you can't get my street address with my call sign. I don't even
live in the city on my license, let alone at the address. You might be
able to find my birthdate in some old database, but is there a current
database that has those?

But Charlie is right, a ham should be able to get a pretty good idea of
who and where he is by "looking up" the given call sign. But his post
was not over ham radio, it was over a newsgroup. And it wasn't related
to ham radio. To those non-hma that may be here, he is just a guy that
calls himself Charlie.

What if I signed this note with...

73,
Lisa
KD6ELA

What if you heard a female voice on the radio signing clear with KD6ELA?

Well I'm not a ham...and for very good reason.
No,it's not the code thing...See I thought about it a while back and concluded
that the "chick magnatism" of ham radio was seriously lacking.

So get Icom to sponsor some "radio babes" and try to talk up that "chick factor"
of ham radio.
If that fails...try porno...it worked for the net.

I am doing some experimentation with diferant ideas. There used to be an 11 meter Ant called a super scanner.

Were playing with the idea of building something like it for 10 meter or 2 meter.

The design is three virticle dipoles mounted about a suport pole.The set up allows the switching of which element is the driven element thus creating a "beam" without a rotor.

Does anyone have any experiance with such a concept?

It is an honor to serve in the thin blue line that separates civilization from stumpjumperism! P I G Pride Integrity and Guts

Hi Dave,

dmunroe@vcd.hp.com (Dave Munroe) wrote:
>Living in an apartment, my problem is the antenna. I tried a
>wound dipole, which turned out to be very inefficient. RST
>from my friend 40 miles away was something like 009 :-) I have

Interesting... Now in my second full week of operation and a half-dozen more QSOs on 40M. I originally started with my antenna indoors and for the first three days did not make a contact. Moved it outdoors (and cut to proper length) and had 3 contacts in the first day (admittedly over several long hours of listening). I'm in the NE and my dipole is strung north-south so it is reasonably directional east-west although I've had some luck with QSOs as far south as VA. My antenna is currently only a couple of feet off the ground - all my contacts are obviously from sky propagation. I hope to string the antenna up a bit higher and more permanent when the weather gets warmer.

I've found several things out in the two weeks on the air. First is that local signals are very rare for me. I'm in call area 1 and in roughly 100 call signs I've copied on the air (mostly during listening as I practice my code) there have been only two from my call area and both reasonably far away from me (100 miles or so). I've tried a couple of pre-set-up local contacts with poor results (barley perceptible signals) but in the 200-500 mile range I've done rather well - RST reports on my signals are typically 449 with the occasional low of 229 and I even had one given to me as the maximum 599. Straight-line and ground propagation for local 40M QSOs seems poor compared to the longer-distance sky propagation. So maybe it makes sense that you did not do well with the 40 mile contact. Also, I find that calling CQ does not yield much for me - just one contact that way. I think many (??) hams prefer to answer a strong CQ however they are more eager to respond if I call them directly in response to their CQ. So... I now spend a lot of time listening and answering CQs rather than trying to CQ myself.

Also, I've found the 7100-7150KHz subband is terrible for me at night. I've only had one contact in the evening mainly due to the international shortwave broadcasters all over the band. I think my 3W signal gets lost in all those other signals. I've had much better luck in the morning and especially on weekend daytime.

>Indeed. Sending and receiving signals through the air still retains
>an element of magic to me.

It has been fun. I'm in the process of building a half-watt 15M transmitter (single frequency only). With any luck, I might have it on the air in a couple of weeks. If I even make one contact with it I'll be amazed (not due to the half-watt but just hard to believe this breadboard project will actually power-up and send a signal ;).

Regards,

Dave

6430. For Trade Realistic HTX-404 70cm Ham radio

I want to trade this new ham radio for a hand held scanner that can go to the 900Mhz frequencies.
If you have what I'm looking for. Then Email me back at vlongpre@cgocable.net with a phone number and a name. Don't reply to the group as I don't come here very often to check.. Thanks.
If its cash you want to pay. Then its $300.00 firm. Its brand new with the box and manual with the charger and bubble rap.
I've never sent things through the mail before. So I want to make sure that I get what I'm asking. As soon as I get what I want for this Ham radio, I will send this to whoever wants it.

6437. Simple & Folded Dipoles

Newsgroup: rec.radio.amateur.misc
Date: 1999-03-18 00:00:00 UTC
From: Reg Edwards <G4fgq.Regp@btinternet.com>
Message-ID: <01be7129$a1afbf80$9d3d63c3@default>
Source record: 147956

Hello folks,

The virtues of large diameter antenna conductors and of 'folded' dipoles are often extolled. But how virtuous ARE these fat, doubled-up radiators ? From where can a quantitative description be obtained ? Why all the secrecy ? Do the Guru's really know how much broader will be the SWR bandwidth of a 40m dipole after increasing wire diameter from 18 gage to 14 gage. It certainly makes it a lot heavier. Or by replacing the antenna's single conductor with ubiqitious 300-ohm twin line, also used for the feeder. It catches the wind better.

Feedpoint impedance, in terms of R+jX, and SWR on the feeder, versus frequency over a band within +/-5 percent of the resonant frequency, of either a simple or folded half-wave dipole, can be investigated by downloading program SWR_FREQ.exe from my website.

Input data:- resonant frequency, conductor diameter, if folded enter conductor spacing, feedline impedance and acceptable VSWR over the band.

Output data is a table of Rin, Xin, Refl.Coeff., and VSWR versus frequency. Also computed:- accurate overall length of resonant dipole, Q and 3dB bandwidth of the antenna when connected to a matched receiver.

Principal assumption :- height of dipole is greater than 0.75 wavelengths. Accuracy falls off at low heights depending on type of ground. Predictions are reliable at dipole length/diameter ratios down to 10-to-1.

Download brand new SWR_FREQ.exe now.

Russ,

Whatever this is about - it seems *very* american to me. It does not relate to contempory Dutch issues, to be sure. Issues, that I will not discuss on this newsgroup, as they would not be of interest to the common demoninator here: Boat Anchors. That is the point I am trying to make - let's stick to business. Or, rename this group. To American BoatAnchors and revisionist Opinons. Just kidding...

But honestly, I happen to be a anti-millitarist. Strange, for someone with a hobby in green radios, I concede. Should I be posting treatises to my believes in that aspect here? I do not think so!

Try not to let your opinions on anything but BA's cloud this newsgroup, thats my opinion. The original posting was trespassing, the endless applauding does get on my nerves.

Kind regards, Wammes Witkop

Icom....hands down. You'll also like Icom or Yaesu for your 2m and HF ham radio stations. I, personally, like Icom for VHF/UHF and Yaesu for HF. Mine have thousands of hours on them! The Yaesu FT-990 ran 24/7 on packet and PACTOR on HF for 3 years with no failures. Icom makes a great marine VHF rig.

Welcome to ham radio! Wade right in. When you get your General ticket or higher, you'll find ham radio just like newsgroups. Certain "controller" types try to make everyone else conform to their idea of a better world. Ignore them....buy a bigger linear...(c;

Larry KN4IM ex WB4THE ex WN2IWH....since 1957!

It may sound kind of morbid, but I have a clause in my will to will all my nice ham radio equipment, about $30K of it, to the youngest licensed ham in SC. A friend did the same who died about 8 years ago. His wife presented an 11 yr old girl with over $42K in radios, parts, antennas, towers, VHF rigs, ht's, etc.....passing on ham radio to the NEXT generation of addicts. It's a great idea, don't you think?

You apparently aren't a MARS member. There is quite a bit of MARs activity
just outside the band edges of 2M. The Army and Air Force tend to operate
just below 144 and the Navy has operations above 148, I recall.

Not to mention the "politically correct" agenda out there that attempts to limit and classify normal thinking and discussion of topics.
Below is an except (and a good example) from Chartleton Heston's speech he gave to the student body at Harvard Law school. To view it in it's entirety goto:
http://www.law.harvard.edu/News/Charlton_Heston_speech.html

>>Finally, just last month . . . David Howard, head of the Washington D.C. Office of Public Advocate, used the word "niggardly" while talking to colleagues about budgetary matters. Of course, "niggardly" means stingy or scanty. But within days Howard was forced to publicly apologize and resign.

As columnist Tony Snow wrote: "David Howard got fired because some people in public employ were morons who (a) didnï¿½t know the meaning of niggardly,ï¿½ (b) didnï¿½t know how to use a dictionary to discover the meaning, and (c) actually demanded that he apo logize for their ignorance. "

What does all this mean? It means that telling us what to think has evolved into telling us what

to say, so telling us what to do canï¿½t be far behind.

Before you claim to be a champion of free thought, tell me: Why did political correctness originate on Americaï¿½s campuses? And why do you continue to tolerate it?

Why do you, whoï¿½re supposed to debate ideas, surrender to their suppression?

Letï¿½s be honest. Who here thinks your professors can say what they really believe?

That scares me to death. It should scare you too, that the superstition of political correctness rules the halls of reason.

You are the best and the brightest. You, here in the fertile cradle of American academia, here in the castle of learning on the Charles River, you are the cream. But I submit that you, and your counterparts across the land, are the most socially conformed and politically silenced generation since Concord Bridge. And as long as you validate that ... and abide it ... you are - by your grandfathersï¿½ standards - cowards.

Hereï¿½s another example. Right now at more than one major university, Second Amendment scholars and researchers are being told to shut up about their findings or theyï¿½ll lose their jobs. Why? Because their research findings would undermi ne big-city mayorï¿½s pending lawsuits that seek to extort hundreds of millions of dollars from firearm manufacturers.

I donï¿½t care what you think about guns. But if you are not shocked at that, I am shocked at you. Who will guard the raw material of unfettered ideas, if not you? Democracy is dialogue!

Who will defend the core value of academia, if you supposed soldiers of free thought and expression lay down your arms and plead, "Donï¿½t shoot me.">>

The 2nd Amendment is but one "birthright" that is under attack.
The entire speech is at
<HREF="http://www.law.harvard.edu/News/Charlton_Heston_speech.html">
It's a good read, and, if it doesn't make you want to stand up and be counted - you should check your pulse.

I read an article once where someone had converted his FT-470 for 9600 bps.
I just hope someone else has seen it and he/she can help me. Imagine if it
could be done, I could connect to any of the 2M/440 FM 9600 FSK satellite
with a small portable TNC and a palmpilot or WindowCE as a terminal.

Marv:

Welcome to the 20th, soon to be 21st, century. They have some amazing things today. Just last month I put down my Picket slide rule and got something called a calculator.

I would say position your paddles the same as you do your straight key, so that your arm is supported in a comfortable position. I think most people prefer the DAHs with the forefinger and the DITs with the thumb, unless *lefties* keep the wiring the same, therefore doing it backwards.

6455. FS: Kenwood TK-806

Newsgroup: rec.radio.amateur.misc
Date: 1999-03-19 00:00:00 UTC
From: TVSJR@SPRYNET.COM
Message-ID: <7cu96t$i5u$1@nnrp1.dejanews.com>
Source record: 147774
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.swap,rec.radio.commercial-lmr,rec.radio.lmr-commercial

For sale:

I have for sale eight Kenwood Tk-806 commercial/LMR radios. I have three radios which are working (tested tx and rx, carrier, pl, and dpl on both band edges) and five with various problems. I'm sure that the non-working five could be put together to make two or three good, working radios, but I don't want to worry with it. These radios are UHF, 470-490 split (I have been told that they will work 460-500, no guarantees on this though!) and 16 channels. They are very similar in function to a Motorola GM-300, with a few differences. (Couldn't find a pic, sorry...) The first difference is the size. The radios are roughly 5.5" wide x 6.5" deep x 1.5" tall. Second, the radios have an orange-backlit quasi-alpha display (eg Ch 1-Ch 16). Each channel set to repeat has a talkaround which is selectable by a single button (changing the display to Ta 1-Ta 16). Also, the front panel has a second button for monitor/open squelch, power push-on/push-off switch, volume control, scan, scan list delete/add (it's very easy to reprogram the scan in these) and REC for option boards such as DTMF decoding and tone signalling options, as well as the RJ-type mic connector and the channel-selector knob. The radios are at least 30 watts out within their bandsplit- I can't remember the exact figure but they may be up to 45 watts.These radios also support hang-up functions, programmable scan timings, TPL/DPL/InvDPL, etc.

Anyway, I would like to sell these radios as a lot. I think that $300 each for the working radios and $250 for all five of the dead ones is fair- total $1150. I think that this price is fair; if you don't, make an offer.

NOTE: I do not read these newsgroups. PLEASE E-MAIL ME AT TVSJR@SPRYNET.COM!!!!!!

Thanks
Terry

And other than the fact that fraud/theft where a money order is concerned is illegal, just how is the buyer protected?

Murder is illegal but there are stiffs in morgues all over the country who were not protected from murder by the law.

The law against murder will [hopefully] put the murderer in jail or [even better] the chair, but it won't bring the dead back to life.

If someone stings you on a deal involving a money order, then [hopefully] the law will put the perpetrator in jail but it won't get you your money back.

Prepaying with a postal money order offers "apparent" protection to the buyer, but "apparent" and "real" are frequently two very different things. It only really protects the seller.

6459. SRC Amateur Radio Logging Programme v1

Newsgroup: rec.radio.amateur.misc
Date: 1999-03-19 00:00:00 UTC
From: Simon <srchud@lineone.net>
Message-ID: <36F29147.5E79DB18@lineone.net>
Source record: 147778

Tired with the standard old logging applications... un-user-friendly interfaces etc?

Well, your time of searching may be over!

The first release of SRC Software's Amateur Radio Utility v1 is now avaliable. It uses the windows interface, which allows quick and easy logging. Many features are included such as automatic frequency identification, contact information, full locator support with distance mapping, shortcut and custom keys, the list goes on!

This programme uses database files which allow data to be entered in any order and format. It is designed mainly for home day to day logging and also after contest logging and sorting out. It supports import/export to and from RSGB LOG format, a commonly used computer logging format. The programme will re-index your log into date/time order, meaning that contacts can be imported how you like. There are hundreds of other features which you will be able to see when you start using this newly developed application.

AND THE BEST PART OF IT IS THAT IT IS COMPLETELY FREE!!!!!!!!!

YES : It is... all you have to do is download it, enter a few details into the page and click on register. Within a few days we will send you the registration details, no costs or catches apply!!!

A Tad of Background Info

This programme has been in the developing process for about a year, and new patches are being created every so often. It has recently been produced, and is avalible to anyone. It was programmed, designed, writen and debugged by me, Simon Chudley, a student in the UK. I am a qualified amateur, M1BWT, and have been operating for about two years ish. Please distribute this programme as you wish, as long as all the files are exactly as I distributed them, and EVERY USER THAT INSTALLS A COPY REGISTERS - REMEMBER, REGISTRATION IS FREE!

How?

Simply go to the following website and click on downloads. Then select AMV1 and download the file. You will then have to select E-Mail Me, and click on Register AMV1. Enter your details along with the programme details (you can find these out from General Preferences) and click on submit. I will send you the registration code via e-mail asap. View the readme.txt file for installation details after running the self-extracting exe file.

Any problems please contact SRC_Software@hotmail.com

Curtis CCR wrote
>I guess I think of it as "call sign worship". Belt buckles, hats,
>doormats....etc.

Probably true. I've been at it 42 years now and as long as I can remember hams always plastered their call signs on everything. I was proud of mine as well. Recently though I changed to a vanity call. I had misgivings after I did it. It felt like I was changing my name. Odd since the original was just a government generated group of characters. Maybe a shrink could make something out of it.

Because of the recent increase of road rage I no longer have ham plates. Further for much the same reason I no longer use my call here on usenet. A sad commentary on our times...

One of the tragedies of the internet age is the ease by which fringe hate groups can now broadly defame others who are just minding their own business.

If you truly have been a ham since 1952, it's a shame that in all those years you never read something called "The Amateurs Code". Contained in there is a line which goes something like "An Amateur is Friendly....".

March 19, 1999

Dear RX-320 User,

Beta version C of the Flexi-Tuner software for operating
the Ten-Tec RX-320 is now available.

Many thanks to all the beta testers for their excellent
ideas. I have incorporated as many of them as possible
in this version.

The major features of the new beta version are as follows:

1. Operates the RX-320 from virtually any desktop
or laptop computer, including older 386 machines.
2. Works in either DOS or Windows (this is a DOS
program).
3. Implements 34 selectivity filters.
4. All modes: AM, USB, LSB, CW.
5. AGC implemented: Fast, Medium, Slow.
6. Tuning steps down go 1 Hz or up to 1 Mhz.
7. Adjustable squelch (operation improved).
8. Bandpass tuning (offset from center freq.)
9. Scanning using scan files. Adjustable parameters.
New! 10. Built-in scan file editor.
New! 11. S-meter.
12. Almost all parameters adjustable (great for
knob twiddlers like me).
New! 13. Improved interface (more logical).
New! 14. Tighter code for faster operation.
New! 15. Improved receiver initialization.
16. No mouse required (or supported).

I have been running the new beta version for the past
couple of weeks on an old Grid 1750 386 (25 Mhz) machine.
It is really great to put the computer on my lap or
coffee table while I sit in any easy chair and listen
to the RX-320. The program has also been tested on a
486 machine, a Pentium 166, as well as a 400 Mhz Pentium
II. It works equally well on all of them in either
DOS or windows.

I would be happy to supply free of charge this Beta version
to anyone interested who has an RX-320. The software will not
function without an RX-320.

The program is supplied along with several scan files in a single zip file. Installation and removal are simple, as the program does not affect any system settings either in DOS or windows (it does not mess with your registry, DLL's, or other system programs).

The program is easy to use - just press various keys to engage the different functions.

Installation, removal, and operating instructions are included.

If there is enough interest, the Beta version may advance into a final version. In any event, I am not aware of any major bugs in the program.

This has been a very fun project - sort of like homebrewing your own ham equipment used to be in the days of tubes and discrete components!

If you would like to receive the latest beta version, send me an e-mail at mktg@ix.netcom.com and I will send you the zip file by return e-mail.

Regards and 73,

David

Looked pretty idiotic to me,people enjoy this hobby in many different ways. That I can't understand why they derive pleasure from a certain aspect doesn't make me feel any hate,animosity or pity on them so I find it hard to see why it bothers some so ? Perhaps jealousy,jealous of others having a good time.
Most of my meager entity total of 139 has been derived from off net activities in my short ham career of 3 years.I do occasionally listen and even work a couple stations to test propogation,hear old freinds,or just see what pops up.The hecklers on the air and on the internet are a very sad aspect of the hobby,I feel no hate,animosity ojealousy toward them but I can't help but pity them.AB7RS

Didn't a certain well known movie actor recently remind us of our moral
and constitutional responsibility to do so? And what exactly does
"armed" have to do with this?

Michael.

Lisa, I guess you are used to a parade of operators using the same call sign.
in the LMR business. Not so in amateyur radio. You, as a guest operator in
another hams shack, should identify with their call stroke your call.

> And you can't get my street address with my call sign. I don't even

Here's an tale that pretty much parallels working DX off the "nets":

I have a relative who worked a summer at a pheasant farm. This was a 100 acre operation that raised the birds with nice corn-fed diet. Then on Saturdays in season, would conduct "hunts". The hunt consisted of taking the pheasants out of their cages and placing them around the fields. The birds, quite tame, just sat where placed until the dog or hunter scared them up. At the end of the "hunt", the participants took their kills back to the lodge, where most of them paid $3 per bird to exchange the fresh kill for a previously cleaned and frozen bird....

DX by way of a net is like frozen pheasant!

I built one recently also. One of the missed Typos include wrong color bands listed for one inductor (gold instead of the correct color.

Another complaint was soldering some upper surface grounds after components were soldered on, not leaving much room for the iron tip.

There is one test done near the end where you solder on a piece of wire to make a temporary antenna connection. I didn't have any way to remove the excess solder at the next step when the wire is removed and replace with a coax. I couldn't get the coax center wire into the hole. After many attempts that required new coax pieces, I finally made it.

I was also annoyed with the need for another transciever for alignment.

I had my first local QSO - 40 miles away last week. Previously they have all been 800 miles. I have talked to people from Seattle, San Diego, Portland, Houston and N.E. Nebraska from my home 40 miles S.W. from Denver. I used a dipole strung along the top of my roof with a bend at each end to take up the rest of the length. My signals have been reported as 549 559 or thereabouts. My first contacts were with an untuned antenna with the power out at about 1 watt. With the antenna tuned it puts out 3.2 - 5 watts, depending on antenna tune and power supply voltage.

Michael,

I was responding to Mr. Wammes Witkop that said in his post: "Frankly, I'm Dutch. We do not like guns in the hands of citizens." Thats why my post referenced being armed. I believe our founders understood how important it was for the government to fear the people rather than the people fearing their government. Support the NRA!

Ignore the spamming BS you may get here Dan,
Ofcourse you can HB an amp.. I have many of times. It's fun and a great learning experience.

It's a shame there are so many "appliance operators" hanging out on VHF but with today's ease on licence requirements I guess we get what we get if we're going to keep the hobby alive.

I have used many different sources from CCI to RF Parts Ramsey sells an OK kit at a decent price but the best performance I ever had was by using an old VFH Marine Tube rig. and converting the PA to 144 Mhz WORKED GREAT on SSB and FM.

Good luck and don't let the CB'rs get you down... <= That should stir up some interesting discussion!

FS: Tower, 90' Rohn 55G

Nine 10' sections of Rohn 55G, extra heavy duty galvanized steel tower, in perfect condition, no rust or corrosion.
Rohn top plate with 2-1/2" thrust bearing.
Rohn rotator bracket, drilled for HyGain HDR-300 (rotator not included).
Steel mast, 6' x 2-1/2" diameter x 1/4" wall thickness.
2 ea. Rohn guy brackets with shackles.
3 sets upper and lower guy assembles using Philystran 6700 above and 5/16" galvanized steel below, insulators, turnbuckles and load balancers.
Rohn engineering drawings and specifications included.

On the ground, ready for pickup, near Boulder, CO. Install a base, three guy anchors, rotator and antenna and you're in business. Texas Towers' current price for the nine 55G sections alone is more than $2,000. What am I bid?
The complete tower goes to the best offer over $990

No doubt you're right. But after researching for an hour, I must decide to take this route again, can't find your direct e-mail address. No doubt that it's my deficiency, being a non-American, an alien. Sorry for not being able to find your e-mail address...
But I will not let it stand at this.

> Aside of that, it's an interesting thread. If you can somehow read it and
> find a way to be offended, it's YOUR problem, not mine. Democracies thrive

> interest here.

Exactly my point. All over the country. What country? Not my country! Again, this is an international newsgroup. Not an American one. So *do* try to curb yourself, please, even if takes an effort.

> Interestingly enough, that's one of the features of "political correctness".
> The new whining class demands that you not talk about something, or use
> their new PC terms because they find it offensive. You might want to go
> back and read the Heston speech.

Not the effing subject! Talk whatever you want, where it is appropriate! But *do not* spam. Simple enough, I'd think.

> In the mean time, stop your whining, and don't read posts that don't
> interest you.

Nor post in the wrong places...Now, as to whining, my pen-pal, why would you say a thing like that? Because I ask you, with a joke thrown in, to adhere to the net-etiquette? Does that single me out for this sort of verbal abuse? I am disgusted with this.

> This time I won't apologize.

And I do doubt gravely you were sincere the first time.

If you care to take this discussion - what a non-word for a one-sided shouting match - any further, please do so by e-mail. Do *not*, please, abuse the newsgroups any further in this.

Once again, my apologies to the innocent bystanders. But Charlie could not go unanswered in my book. Now, *that* would have been very political correct indeed...

Kind regards to all who's time I've taken up unsollicited,

Wammes Witkop

The question I have is...

...why did the long-haul truckers migrate to the first 100 khz of 28 MHz? What's wrong with the exisiting legal CB 40 channels from 26.965 to 27.405, plus the informal "freeband" frequencies between 27.405 and 28.000? Is there not enough room there anymore? Too much "interference" from their brother freebanders?

And what will happen when 28.000 to 28.100 gets too "crowded"? Will they keep moving up the spectrum?

JJ and NG,

>>>>They are already up above 28.5.<<<<

They are in the bottom 2 MHz of the old 30-50MHz public service band, too. There ARE a couple of legit business licensee's there, but the rest is your basic 10-4 good buddy trucker comms.

Go figure!

Well,
I would not go that far. I would suggest that if you are afraid that the person is gonna not pay for the COD, then ask as a act of good faith that they send enough money to cover the shipping and COD fee.
If they refuse then don't send it.

I sometimes request COD since it would mean my package would arrive sooner since it did not have to wait for my payment to arrive and then for it to be shipped... but on the other hand.. if you are the shipper, that just means that it would take longer to recieve your money..

Just my thoughts on the matter..

>moving up the spectrum?
>
>Joe, W1GFH

Hi, Joe. Here's the history of the situation:

Most of the truckers and other illegal operators do not know the actual frequency they are on. There is a flood of "export" radios which have no dial/readout. There are two knobs--one for band and one for channel.

The BAND selector goes from A to K (more on some models, less on others). The CHANNEL selector goes from 1 to 40.

Somewhere around BAND "C" or "D", you have the regular CB frequencies. On that "band" the CHANNEL switch corresponds to the channel numbers for a type-accepted rig.

Obviously, the rig can go below the regular CB or considerably above it. The manufacturers of these radios have assigned channel numbers every 10 KHz. In the ham band, these are 28.005, 28.015, 28.025, etc.

Truckers gravitated to 28.085 because of the BAND/CHANNEL relationship to the regular CB. In order words, they only have to switch the BAND from "C" to "G", let's say, to get from ch.19 to their "company channel" (as they call it).

Some of these export radios will go quite high in the 10 Meter Amateur band. Again, many of the pirates do not have any idea where they are in the spectrum. All they know is they were able to get one of the "fancy radios with the extra channels." Naturally, the dealer does not tell them that they are going to annoy ham operators on the higher band switch positions.

The situation has gotten better, as far as US stations are concerned. Often, a quick general reminder (without engaging in conversation) will send them back to the regular CB. The FCC takes the same stance as that German guard on Hogan's Heros--"I know NOTHING." There has been a lot of dialog with trucking company CEOs and correspondence in Popular Communications, as well as in magazines published for the trucking industry. The word is "getting around." Don't go into the ham band!

The foreign stations are a difficult problem, however. Experiments with advisory messages in Spanish have proved effective short-term, but there is a flood of these stations. Cheap export radios are a blessing in many countries in the Southern Hemisphere. Telephones are non-existent or expensive. Radio is filling a gap and it is difficult to run these folks back below 28.000. Bursts of RTTY/Packet, even at moderate power levels, seem to disrupt the pirates and drive them to another frequency. By looking for them on the frequencies ending in "5", you usually can track the QSY.

If you've patient, you can "herd" them downward until they finally drop below 28.000 to get a clear spot. (This is great sport!) Once they are below 28.000, hams should leave them alone. There are two reasons for this. First, that's not our band, so it's not our fight. Second, they are out of the ham bands and can enjoy a conversation without being "molested" by RTTY. Hopefully, they will "adopt" the new frequency in the so-called Freeband and will stay out of our turf.

A group of hams around the country is participating in the Intruder Watch, as it is informally known. Close contact is being maintained with FCC Columbia Maryland. If you have not read it already, flip to the nice article about the Columbia facility in the latest QST Magazine. And when you hear a pirate, don't hesitate to call CQ on the same frequency. It's not intentional interference if the pirate is not authorized to be there!

Final thought: Make sure it IS a pirate before jamming. Clues are voice transmissions in the CW sub-band, and no call signs.

Yrac

Boy this sure tells me that you are being ID by your call sign.

S 97.3 Definitions.
(a) The definitions of terms used in Part 97 are:
(1) Amateur operator. A person holding a written
authorization to be the control operator of an amateur station.

S 97.5 Station license required.
(1) An operator/primary station license (FCC Form 660)
issued to the person by the FCC. A primary station license is
issued only to a person, together with an operator license on the
same document. Every amateur operator licensed by the FCC must
have one, but only one, primary station license. Except a
representative of a foreign government, any person who qualifies
by examination is eligible to apply for an operator/primary
station license.

S 97.7 Control operator required.
When transmitting, each amateur station must have a control
operator. Only a person holding one of the following documents
may be the control operator of a station:
(a) An operator/primary station license (FCC Form 660)
issued to the person by the FCC.

Well the best way for all of this to stop is to be 100% honest. We who
are of the amateur botherhood are supposed to be above all that stealing
and stuff. I would expect that from the ranks of CBers.
Thats just my opinion I could be wrong.

Collins SM-3, with original curly cord, PJ 068 connector, cloth bag and original shipping box. Very good condition, but missing Collins (round) emblem - few minor marks on mic barrel & base. $350.00 shipped airmail anywhere in USA.

John Mackesy

One of the last deals I made I shipped fedex COD 2nd day. SHipped on
Monday and had my money on Thursday same week, not bad at all.

Sam

> radio?

Duh. When you passed you passed your code test, did you take a written? Do you think the theory of operation behind a radio in a boat or an airplane is somehow different than one the operates just a few megahertz away?

> Can the FCC contact you at the address they have on file for
> you?

Yes they can. If you would like to send me a Christmas card in Decemeber, that address will work.

> Take a peek at part 97 O Wise One and see what the FCC has to say

I did.
